

How to determine Mac shutdown causes

Determine why your Mac shut down via Terminal on macOS and OS X.

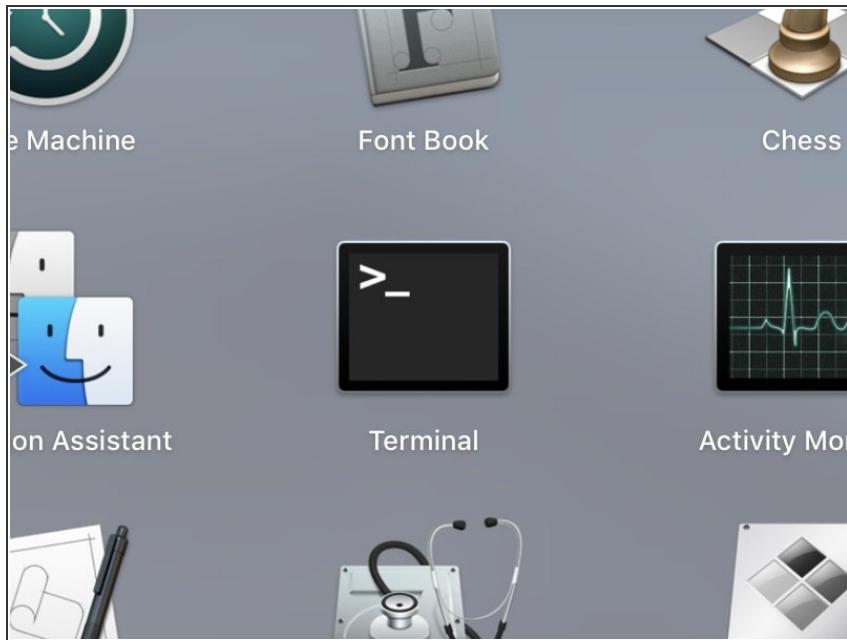

Written By: Jonah Aragon

INTRODUCTION

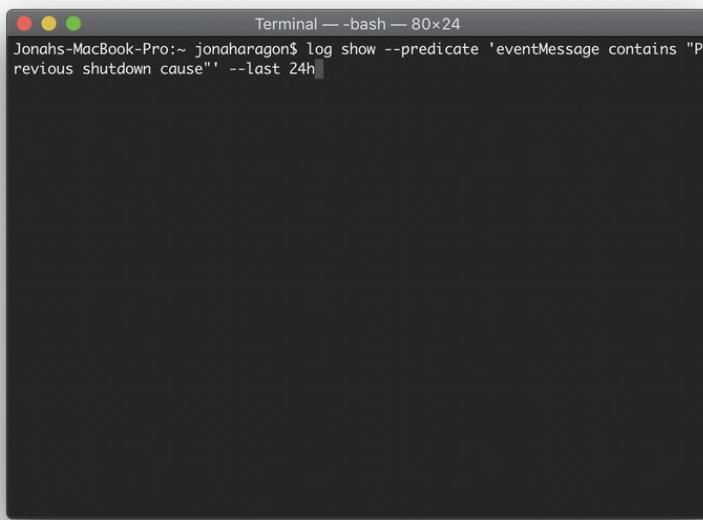

This guide will show you how to determine why exactly your Mac shut down or restarted using macOS's built-in logging.

Step 1 — Open Terminal.app

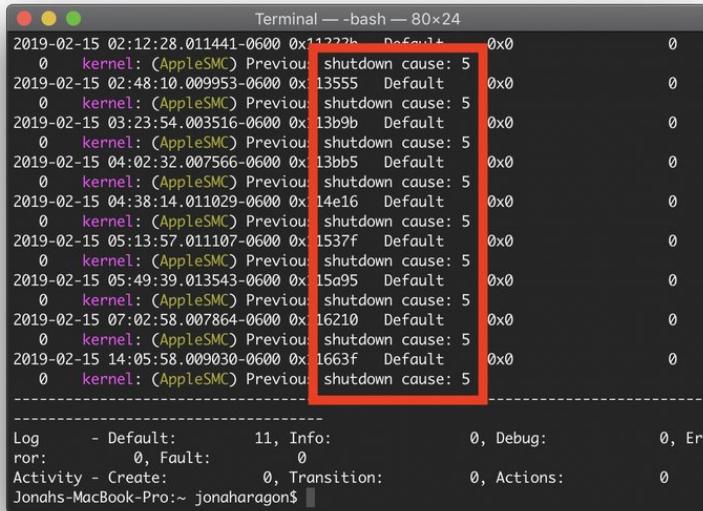

- Open **Terminal.app**

Step 2 — Listing previous shutdowns

- Copy and paste the following command in your Terminal window:
 - **i** `log show --predicate 'eventMessage contains "Previous shutdown cause"' --last 24h`
 - **i** The "24h" portion of the command can be changed to any number of hours, depending on how far back you need to see.

Step 3 — Determining Shutdown Causes

A screenshot of a Terminal window showing a list of shutdown causes. The output is as follows:

```
Terminal — bash — 80x24
2019-02-15 02:12:28.011441-0600 0x11223b Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 02:48:10.009953-0600 0x13555 Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 03:23:54.003516-0600 0x13b9b Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 04:02:32.007566-0600 0x13bb5 Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 04:38:14.011029-0600 0x14e16 Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 05:13:57.011107-0600 0x1537f Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 05:49:39.013543-0600 0x15a95 Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 07:02:58.007864-0600 0x16210 Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
2019-02-15 14:05:58.009030-0600 0x1663f Default 0x0 0
0 kernel: (AppleSMC) Previous shutdown cause: 5
```

Log - Default: 11, Info: 0, Debug: 0, Err: 0
 ror: 0, Fault: 0
 Activity - Create: 0, Transition: 0, Actions: 0
 Jonahs-MacBook-Pro:~ jonaharagon\$

- The previous shutdown causes in the timeframe you selected will appear as a list.
- Common shutdown causes include 5 which indicates a normal shutdown, 3 which indicates a hard shutdown (i.e. holding the power button), and 0 which indicates the power was disconnected.
- A full list of shutdown causes can be found here: [Shutdown Causes](#).

Done! You should be able to use these codes to further troubleshoot random shutdowns or other strange events.
