Step 1 — How to fix HP 15-AF131DX Notebook when it is running slow

- Device is running slow: -First, close all running applications that may be using disk space -Then restart the computer to refresh programs and applications.

Step 2

- -If this doesn't work, you need to make sure that there is at least 15% space open on the hard drive To check this, open up the "Computer" from the start menu. This should display your hard drive memory. If you have less than 15% space, delete unused items to free up space. This will speed up your computer significantly

Step 3

- -Finally, update your graphics driver using Device Manager: In Windows, search for and open Device Manager. In the list of devices, expand Display adapters. Right-click the graphics device and select Update Driver Software.

Step 4

- Click Search automatically for updated driver software. Follow the onscreen instructions to install the updated driver. Restart your computer to complete the installation of the updates.

To reassemble your device, follow these instructions in reverse order.
