

# How to jump start a 2010 Honda Insight

This guide will teach you how to solve the problem of a dead battery in a Honda Insight by providing a step by step process of jump starting a car.

Written By: Hannah Jackson

## INTRODUCTION

Is your car not starting? Is there a clicking noise when you turn your key in the ignition? If yes, then you have a dead battery. Follow the directions below in order to jump start your car!

### TOOLS:

- [8 Gauge Booster Cables \(Jumper Cables\)](#) (1)
  - [Another Vehicle](#) (1)
-

## Step 1 — How to jump start a 2010 Honda Insight

- ❗ Make sure that both cars are turned off.
- Pop open the hood of the Insight by pulling the lever located here:

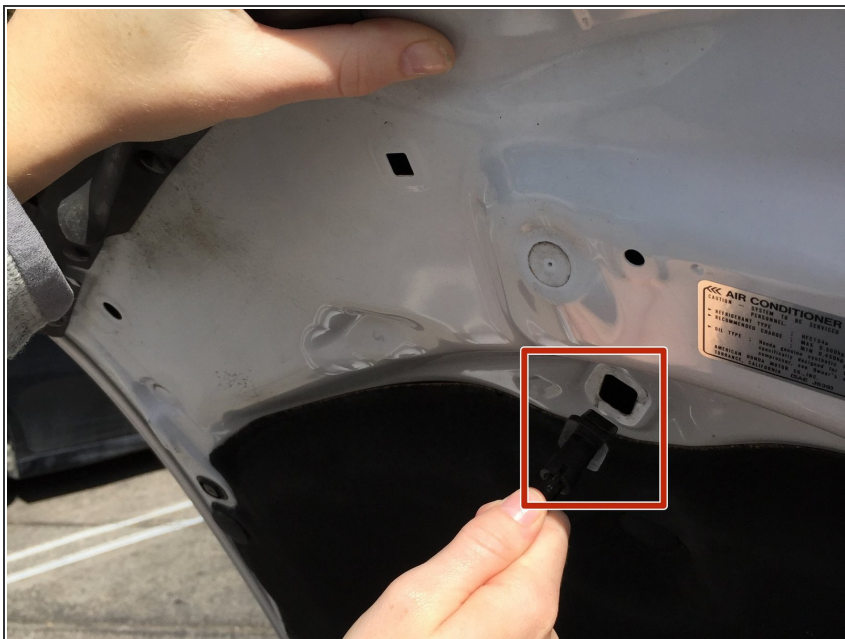

## Step 2

- Open the hood by reaching under the hood (in the front and center) and pulling the lever.

### Step 3

- Lock open the hood by grabbing the rod and inserting it into the hole on the under side of the hood.

### Step 4

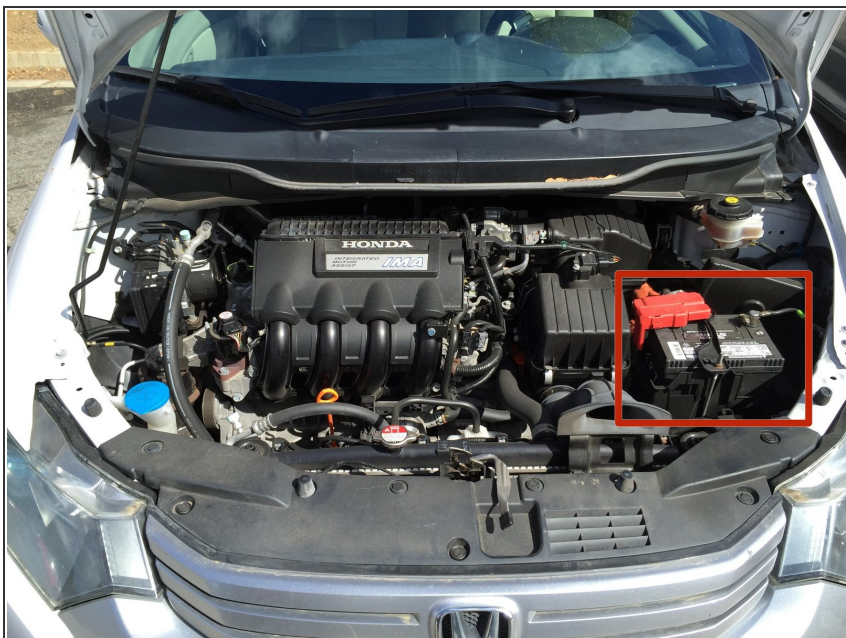

- Open the hood of the secondary car, and lock it up into place (with spring-action rod if necessary).
- Spring-action rod

## Step 5

- Grab your jumper cables.

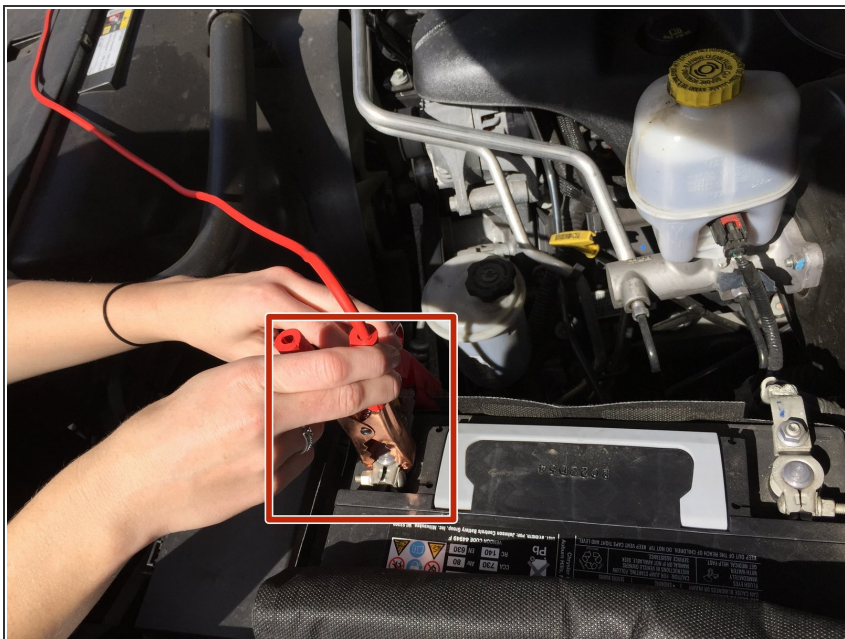

## Step 6

- Locate the battery in both the Honda Insight and the secondary car.
- ⓘ The battery always has a big red plastic part that will indicate the positive terminal.

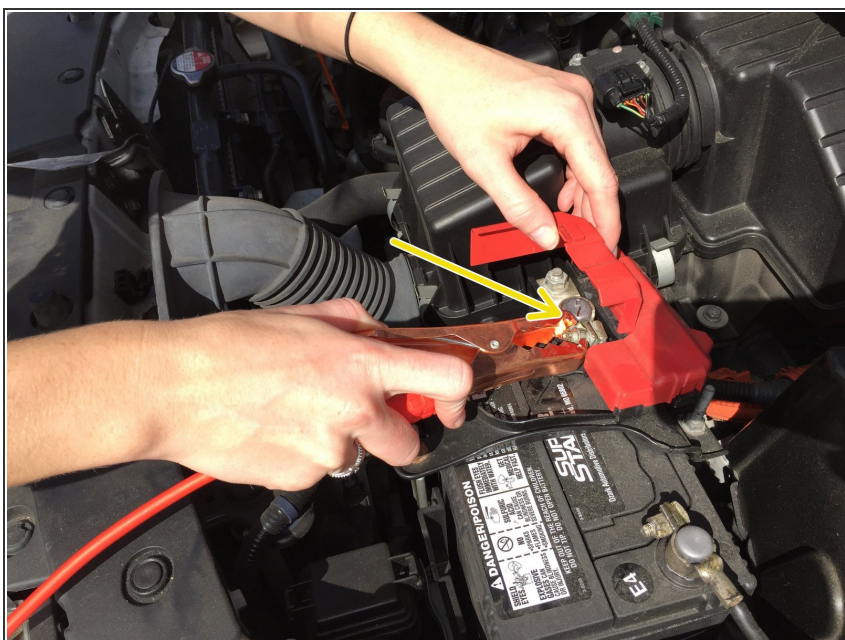

## Step 7

**⚠ WARNING! DO NOT LET THE LEADS TOUCH EACH OTHER OR ANY OTHER METAL!**

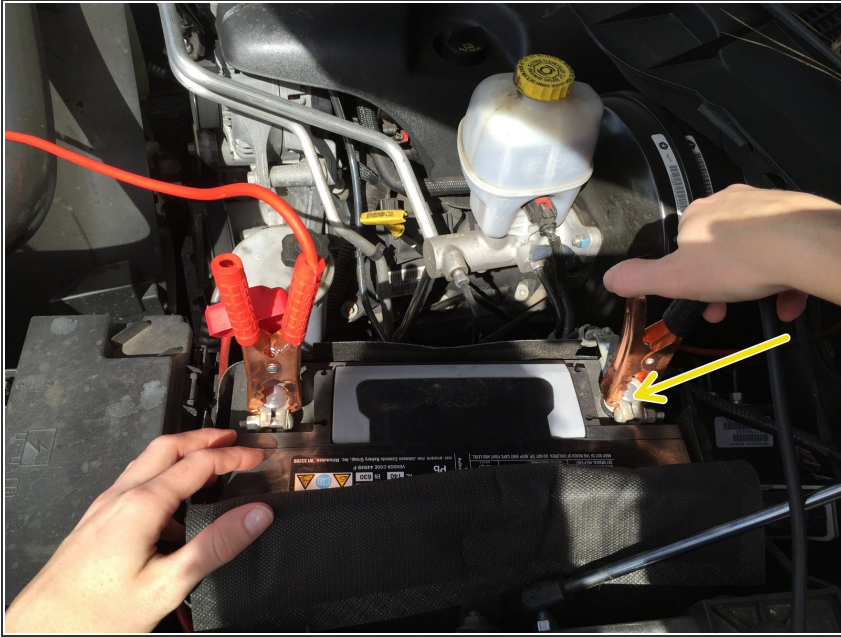

- Attach the RED lead to the **secondary car's** battery where the positive (RED) terminal is.

## Step 8

- Attach the other RED lead to the positive (RED) terminal of the **Honda Insight's** battery.

## Step 9

- Attach the BLACK lead to the **secondary car's** battery where the negative terminal is.

## Step 10

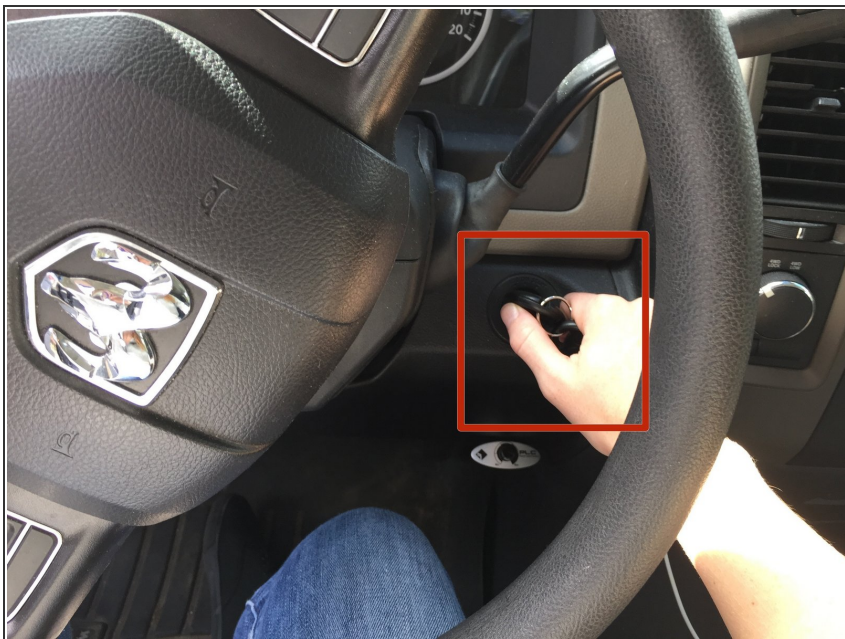

- Attach the other BLACK lead to the grounding strap located here:

⚠ Do not connect the black lead to any other part of the car.

## Step 11

- Start the engine of the **secondary car** and let the engine run for 1-2 minutes.

## Step 12

- Start the engine of the **Honda Insight** and let it run for 2-3 minutes.
- ⓘ NOTE: If your Insight does not start at this point, let the battery charge for a few more minutes.

## Step 13

- After the Insight has successfully started and has been running for a few minutes, remove leads in reverse order of attachment.

 **WARNING: DO NOT LET THE LEADS TOUCH EACH OTHER OR ANY OTHER METAL!**

## Step 14

- Drive the Insight for at least 30 minutes before turning it off again to ensure a full charge of your battery.

 **NOTE:** You may also simply let the engine run for 30 minutes rather than driving.

If your car still does not run after all of this, **call a mechanic** because you may have a bigger problem than a dead battery.
