# INTRODUCTION

Use this guide to replace the battery in your Huawei P10 smartphone.

## TOOLS:

- [P2 Pentalobe Screwdriver iPhone \(1\)](#)
- [SIM Card Eject Tool \(1\)](#)
- [Spudger \(1\)](#)
- [iFixit Opening Tools \(1\)](#)
- [Phillips #00 Screwdriver \(1\)](#)
- [iOpener \(1\)](#)
- [iFixit Opening Picks set of 6 \(1\)](#)

## PARTS:

- [Huawei P10 and Honor 9 Replacement Battery \(1\)](#)

## Step 1 — Back Cover

- Switch off your phone.
- Remove the two Pentalobe P2 screws at the bottom.
- Remove the SIM card tray.

## Step 2

- Insert a plastic opening tool between the display and the case starting at the bottom area of your phone.
- Carefully pry the display with its parts out of the case.
- *(i)* Getting the prying tool in will require some effort, be careful not to slide the tool too much or you might slightly damage the housing.
- After you pried out the bottom end, use the opening tool to open the clamps on both sides.

## Step 3

**⚠** Don't open the phone all the way, yet. The cable for the standby and volume buttons is still connected to the back cover.

- Swing open the phone backwards.
- Use a spudger to disconnect the power- and volume button flex cable.

## Step 4 — Battery

- Remove the two Phillips #00 screws.

## Step 5

- Use tweezers to remove the two cable brackets.

## Step 6

- Use a spudger to disconnect the battery, the interconnect and the display flex cable.

## Step 7

- ⓘ The battery is glued in place with two adhesive strips. One with a pull tab and one without.
  - Peel out the adhesive strip which is placed beneath the battery by steadily pulling at the tab in a flat angle.
  - ⓘ It is likely that the adhesive strip rips. In this case you can grab and twist it around a tweezers tip a couple of times and then continue.
  - [Use an iOpener](#) to loosen the remaining adhesive.

## Step 8

**⚠** Take care to not bend or puncture the battery.

- Insert an opening pick or spudger beneath the battery and carefully pry it out.
- Remove the battery.

**☒** When reassembling your phone replace old adhesive with [double-sided tape](#) or [pre-cut adhesive strips](#).

**⚠** Never reinstall a battery that has been bent or damaged during removal.

To reassemble your device, follow these instructions in reverse order. When reassembling your phone apply new adhesive where it is necessary.
