

Huawei P10 Display Replacement

Remove and replace the display in your Huawei P10 smartphone.

Written By: Dominik Schnabelrauch

INTRODUCTION

Use this guide to remove and replace the display in your Huawei P10 smartphone.

To protect your eyes from glass shreds and get a better grip to open the phone you might want to apply some tape onto the screen.

When reassembling apply new adhesive where it is necessary.

TOOLS:

- [P2 Pentalobe Screwdriver iPhone](#) (1)
 - [Tweezers](#) (1)
 - [Spudger](#) (1)
 - [Phillips #00 Screwdriver](#) (1)
 - [iOpener](#) (1)
 - [iFixit Opening Picks set of 6](#) (1)
 - [SIM Card Eject Tool](#) (1)
 - [iFixit Opening Tools](#) (1)
-

Step 1 — Back Cover

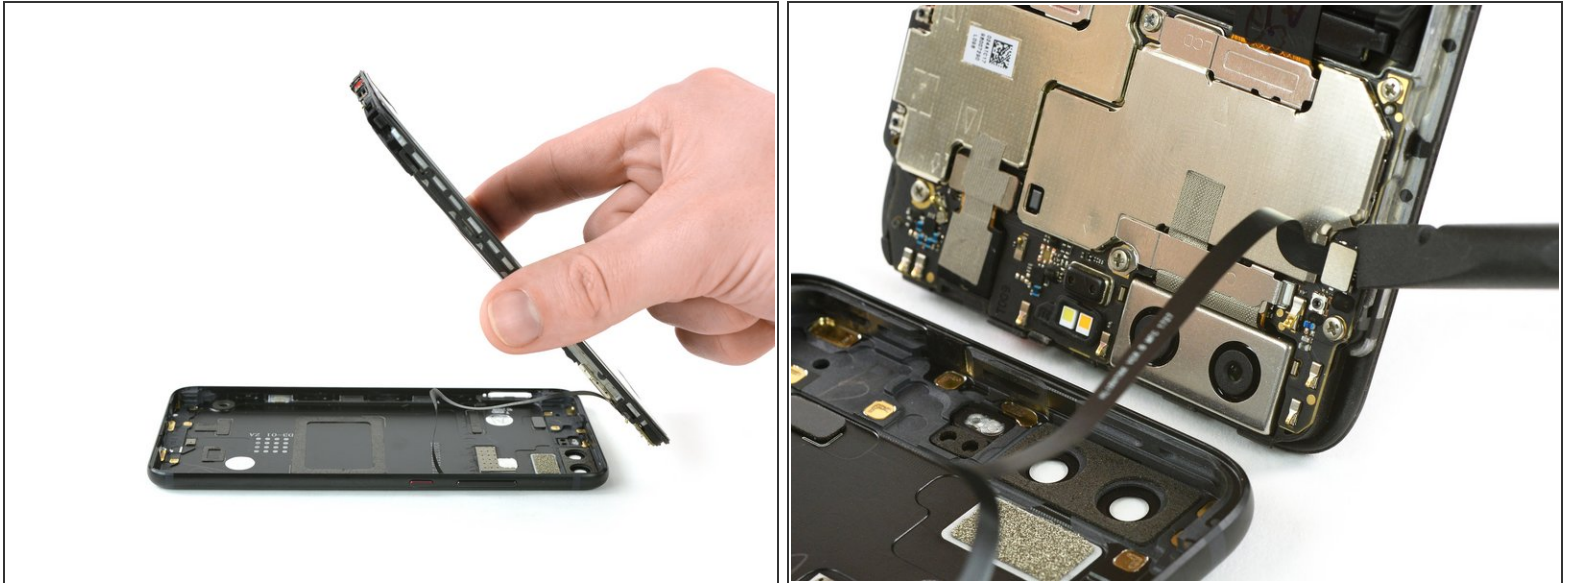

- Switch off your phone.
- Remove the two Pentalobe P2 screws at the bottom.
- Remove the SIM card tray.

Step 2

- Insert a plastic opening tool between the display and the case starting at the bottom area of your phone.
- Carefully pry the display with its parts out of the case.
 - ⓘ Getting the prying tool in will require some effort, be careful not to slide the tool too much or you might slightly damage the housing.
- After you pried out the bottom end, use the opening tool to open the clamps on both sides.

Step 3

 Don't open the phone all the way, yet. The cable for the standby and volume buttons is still connected to the back cover.

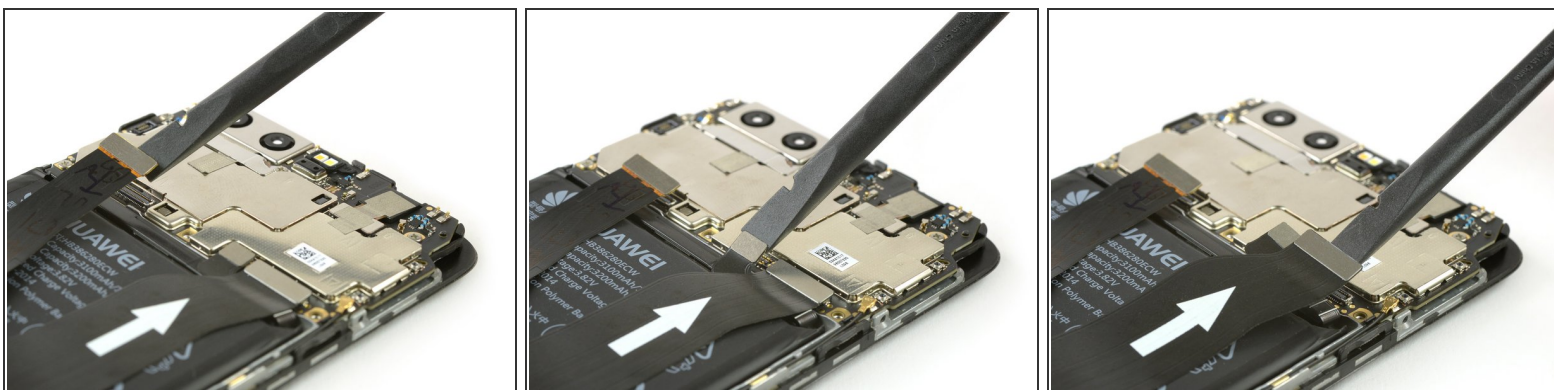

- Swing open the phone backwards.
- Use a spudger to disconnect the power- and volume button flex cable.

Step 4 — Main and display flex disconnect

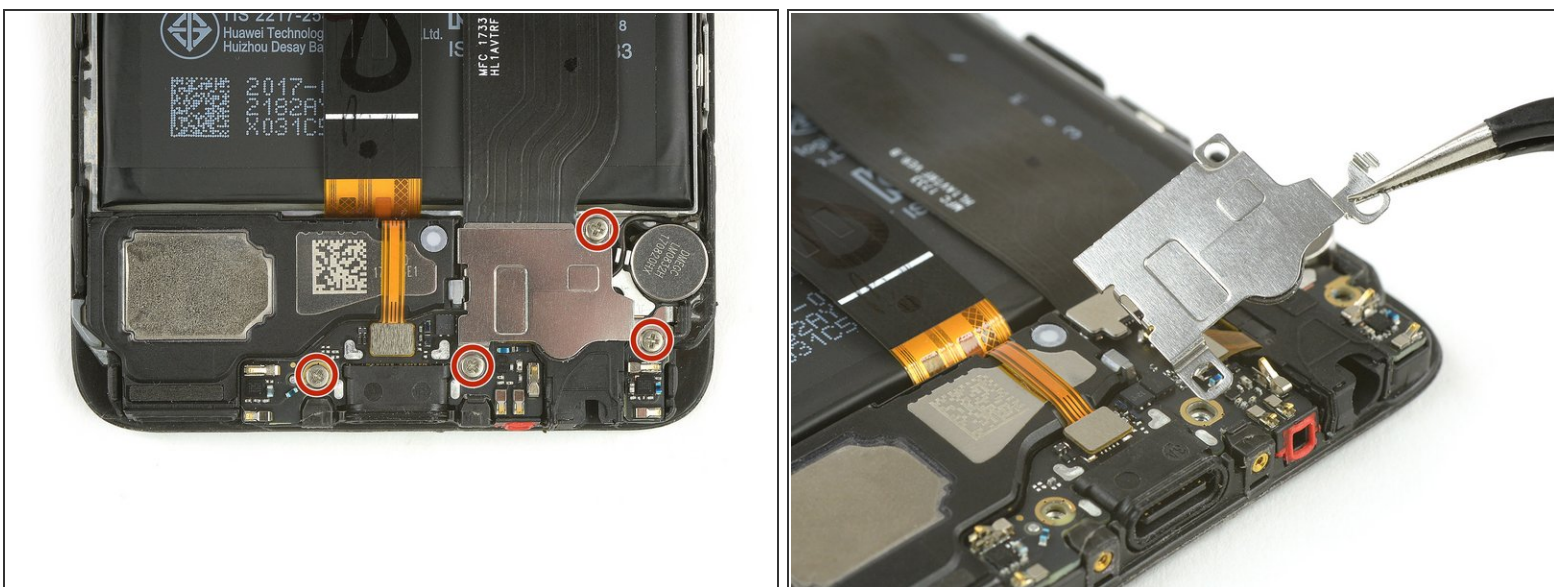

- Remove the two Phillips #00 screws.
- Use tweezers to remove both metal plates.

Step 5

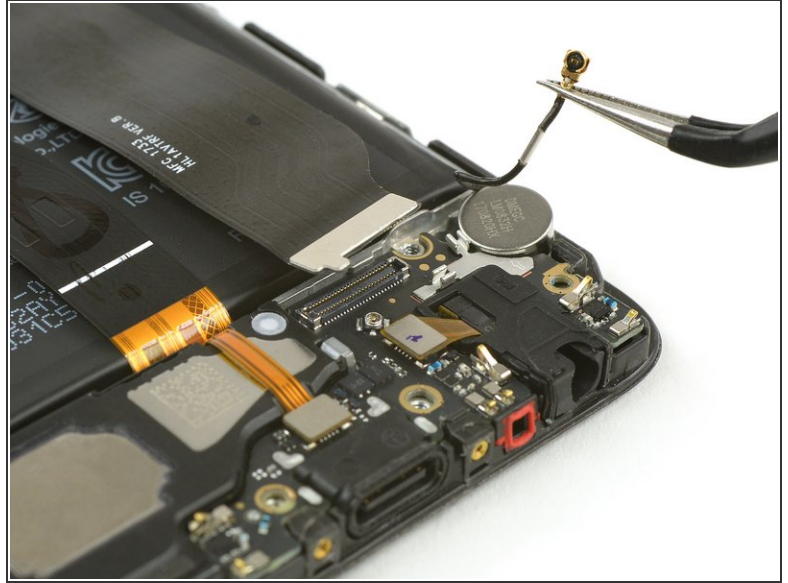

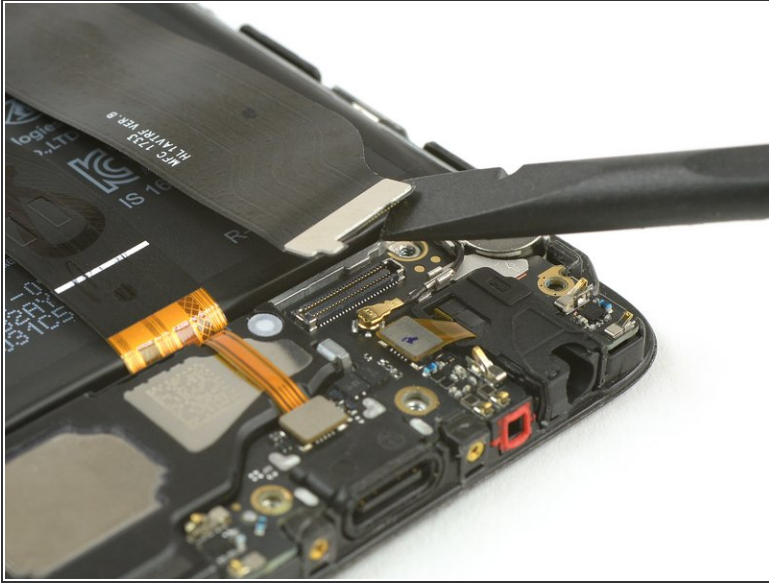

- Use a spudger to disconnect the interconnect, the battery and the display flex cable.

Step 6 — Charging Board

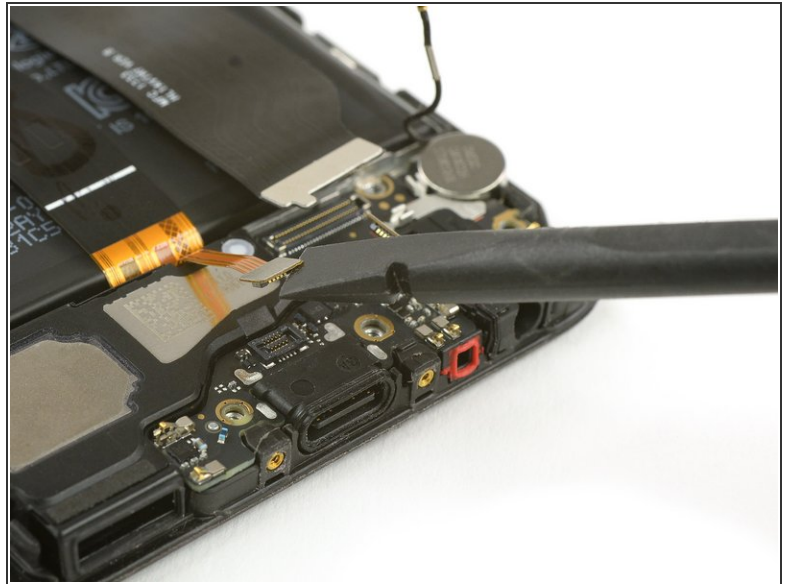

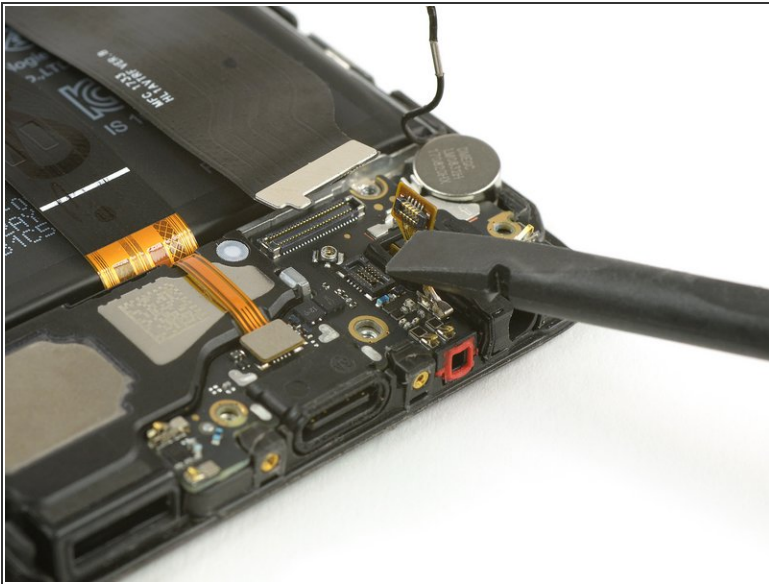

- Remove the four Phillips #00 screws.
- Use Tweezers to remove the metal plate.

Step 7

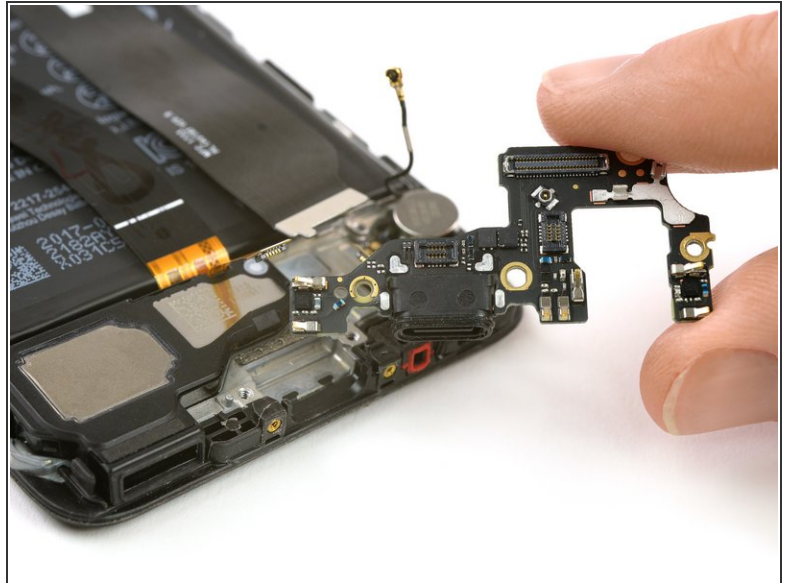

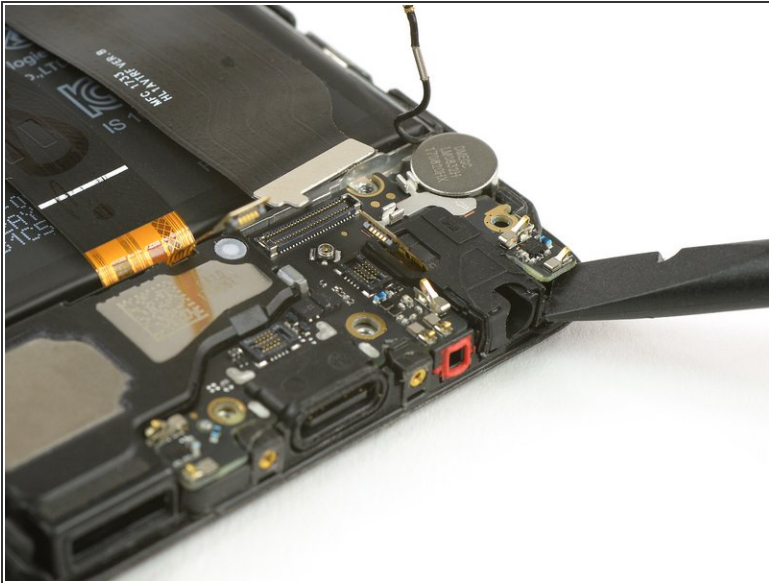

- Use a spudger to disconnect the main flex cable.
- Use tweezers to disconnect the antenna cable and pull it out of the clamp holding it down to the charging board.

Step 8

- Use a spudger to disconnect the headphone jack and the loudspeaker flex cables.

Step 9

 Do not damage any components sitting on the charging board while removing it.

- Use a spudger to pry out the charging board.
- Remove the charging board.

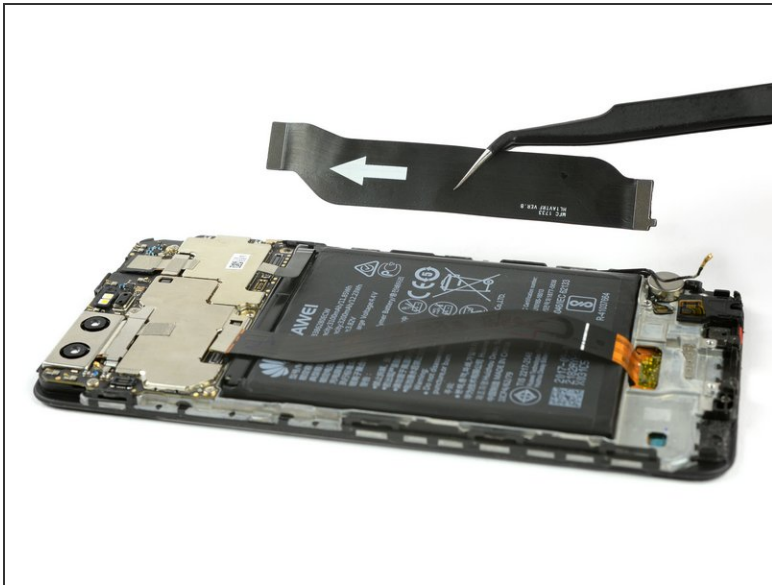

Step 10 — Loudspeaker

 Only insert the spudger as deep as 1/16 of an inch to avoid damage.

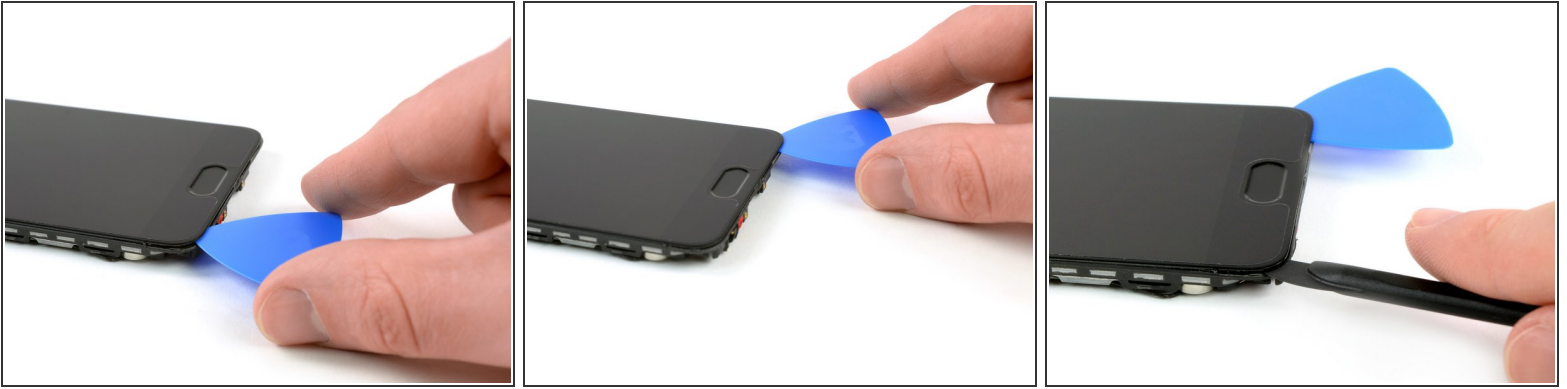

- Use a spudger to carefully pry out the loudspeaker. There is some adhesive underneath so it might be a little bit sticky. You can [use an iOpener](#) to loosen it.
- Remove the loudspeaker.
-  When reassembling your phone, apply new adhesive where it's necessary.

Step 11 — Display

- Remove the antenna cable if you haven't already.
- Use tweezers to remove the interconnect cable.
- [Use an iOpener](#) to loosen the adhesive beneath the display. Especially take care of the upper and lower part of the display.

Step 12

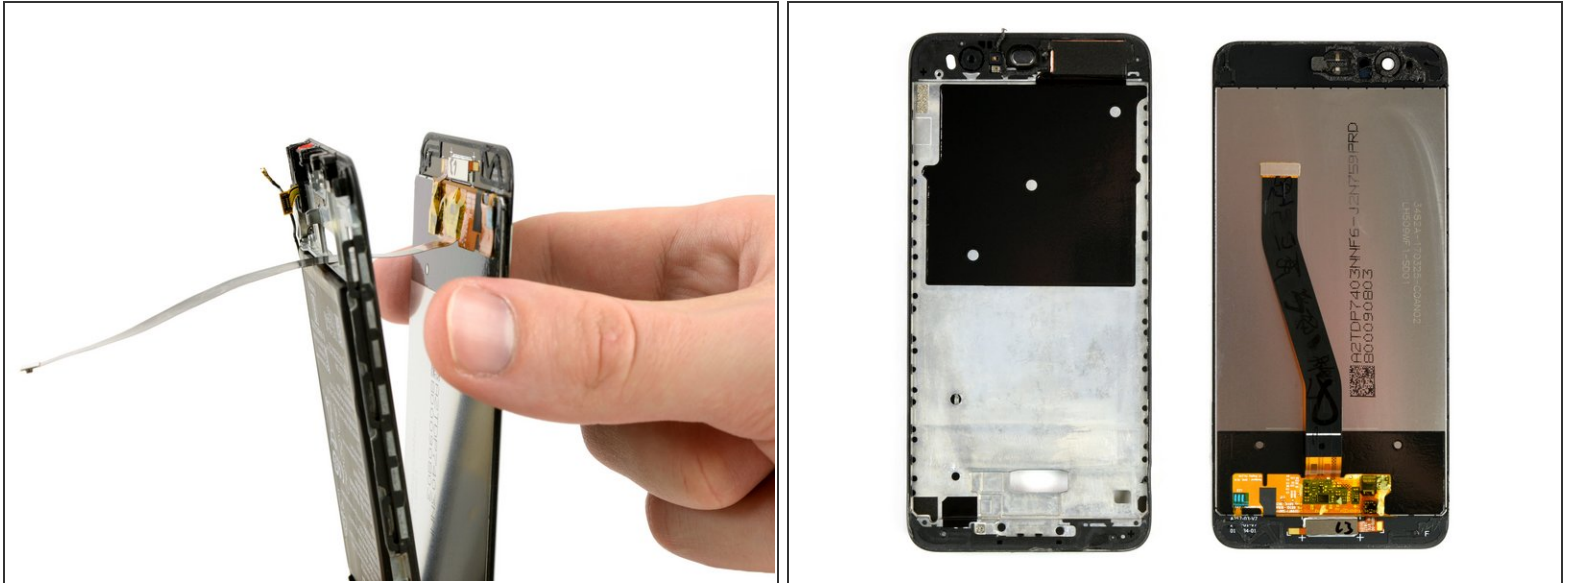

- Insert the tip of an opening pick between the display and the midframe on the bottom of the phone, near the home button.
- Slide the opening pick along the bottom edge, to cut the adhesive.
- Slide the opening pick to the bottom right corner and leave it there.
- Insert another opening pick under the screen on the bottom left corner.

Step 13

- Slide the opening pick under the screen around all edges of the phone.
- ⓘ If the adhesive gets tough to pry it is likely too cold. Use your iOpener or heat gun to reheat it.

Step 14

- Carefully pull the display assembly away from the frame.
- Remove the display assembly.

To reassemble your device, follow these instructions in reverse order.
