Step 6

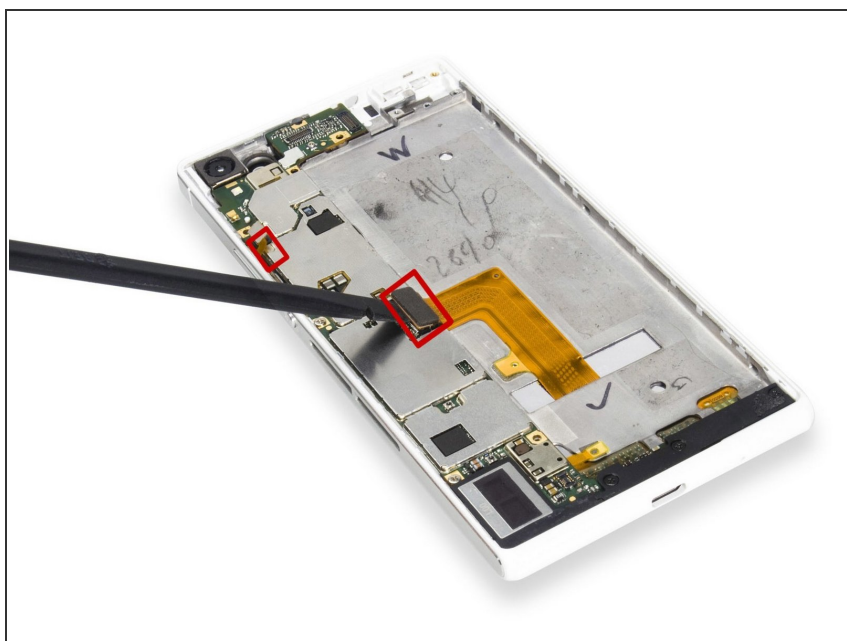

- Release connector and remove front facing camera.

Step 7

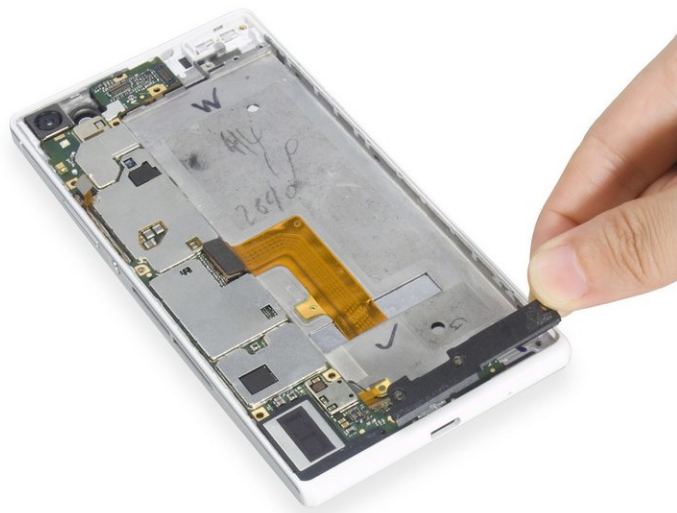

- Release the connector and pry to remove headphone jack assembly.

Step 8

- Release power flex connector and LCD screen connector.

Step 9

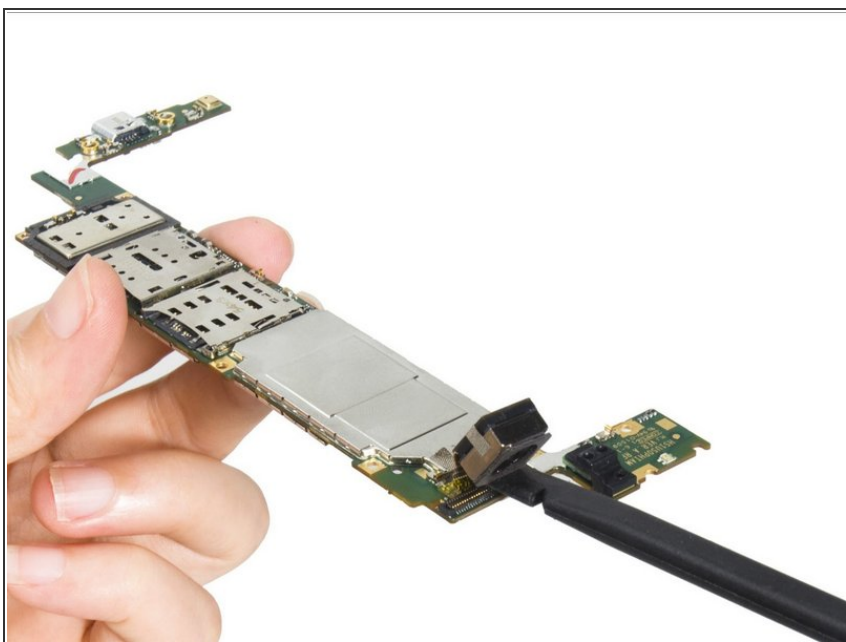

- Twist off screws and remove bottom securing bracket.

Step 10

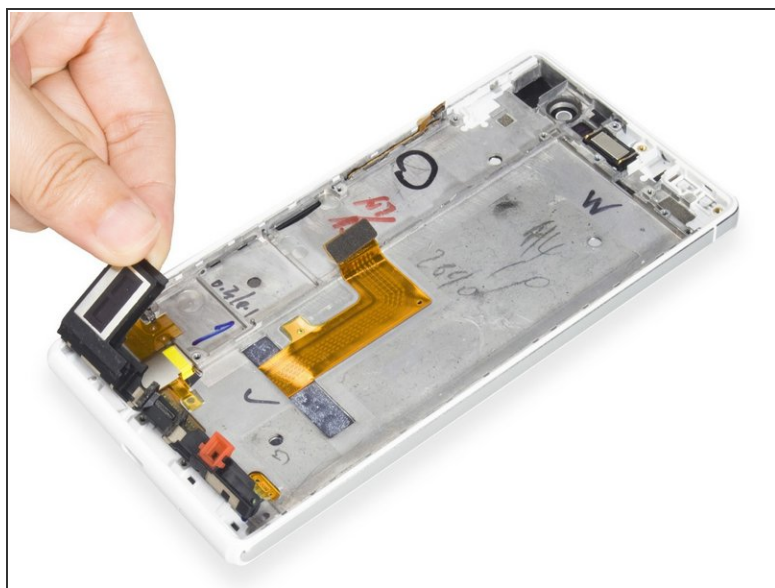

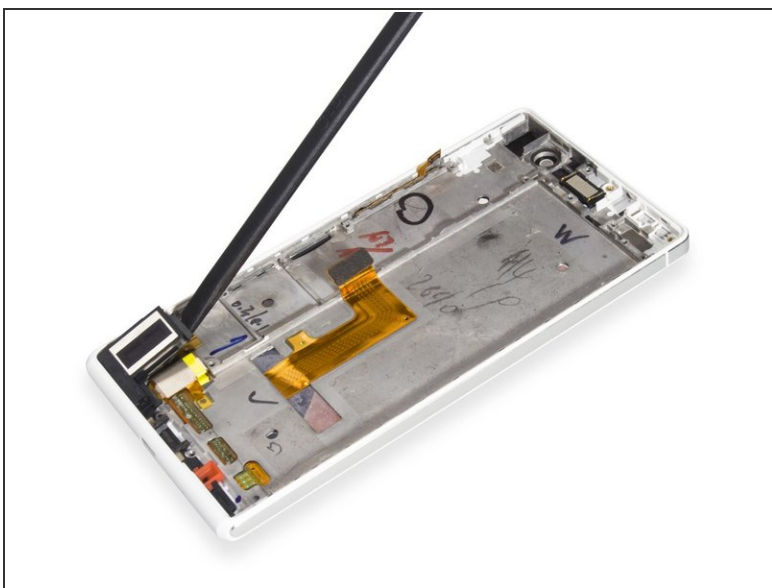

- Remove motherboard.

Step 11

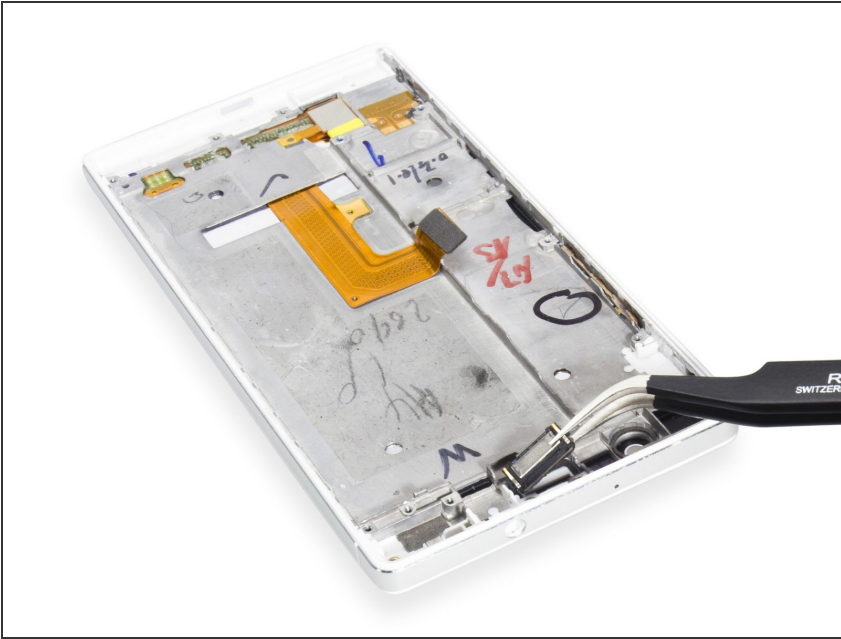

- Remove rear facing camera by the way.

Step 12

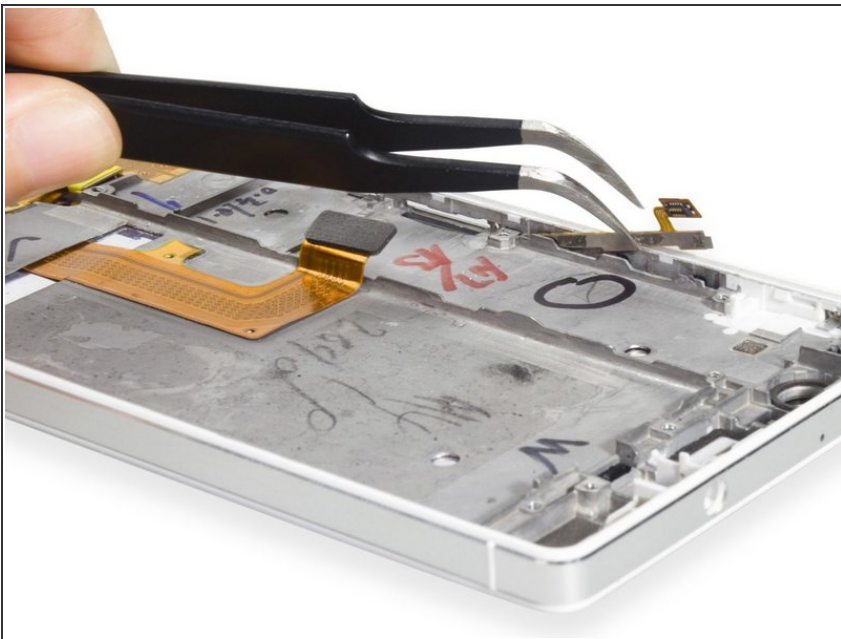

- Remove loudspeaker assembly.

Step 13

- Remove earpiece speaker.

Step 14

- Remove power flex.

Step 15

- Done.
- We are sorry that didn't separate the screen from mid-frame. Because we can't open a gap between them even after a long time heating and many times try. It's said there is glue but not the sticker around the screen. So if operate with force, it's at high risk to break that good screen and scratch the frame.
- But you can do it freely when you have cracked the screen and need a screen replacement.

To reassemble your device, follow these instructions in reverse order.
