

# InFocus LP540 Projector Lamp Replacement

This guide will assist with replacing a non-functioning projector lamp, which is responsible for providing the light necessary for projection.

Written By: Jorge L Navarro

## INTRODUCTION

This guide will assist with replacing a non-functioning projector lamp, which is responsible for providing the light necessary for projection.

### TOOLS:

- **Phillips #2 Screwdriver** (1)
- **Flathead Screwdriver** (1)

## Step 1 — Lamp

- Place the projector on its back with the control buttons facing down.
- Remove the black 7mm screw on the external case with a Phillips 2 screwdriver.

## Step 2

- Use the plastic flat-head to remove the lamp lid.

## Step 3

- Remove the 7mm screw near the bottom center with a Philips 2 screwdriver head.
- Loosen but do not remove the 7mm screw near the upper right corner with the Phillips 2 screwdriver head.

## Step 4

- Grab the silver handle.
- Unhook the handle so it can move freely.
- Pull the handle straight up until the lamp is completely removed from projector.

To reassemble your device, follow these instructions in reverse order.
