

InFocus LP540 Projector Main Board Replacement

Written By: Jorge L Navarro

 **TOOLS:**

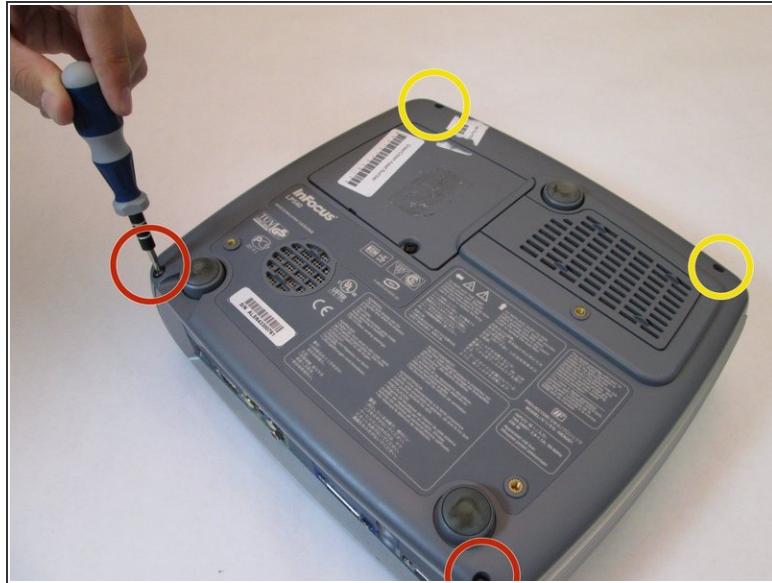

- [Flathead Screwdriver \(1\)](#)
- [T10 Torx Screwdriver \(1\)](#)
- [Phillips #0 Screwdriver \(1\)](#)

Step 1 — Main Board

- Flip the projector right-side up and turn it so that the back ports are facing you.
- Remove the 7mm metallic hex screws using the flat-head screwdriver.
- Remove the two black 10mm screws using the T10 Torx screwdriver head. The screws are located at the center of the back panel.

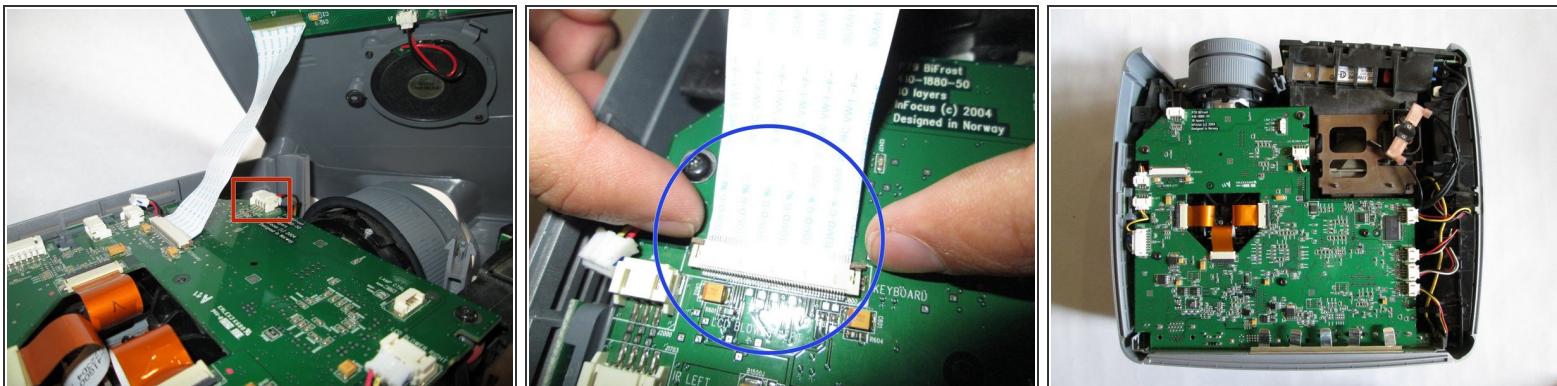

Step 2

- Flip the projector over.
- Remove the two 77mm screws that are located nearest to the back panel ports. Use the T10 Torx screwdriver head.
- Next, remove the two 10mm screws located near the lens side with the T10 Torx screwdriver head.
- Flip the projector back over.

 Lift up the main lid cautiously to avoid ripping the electrical ribbons.

Step 3

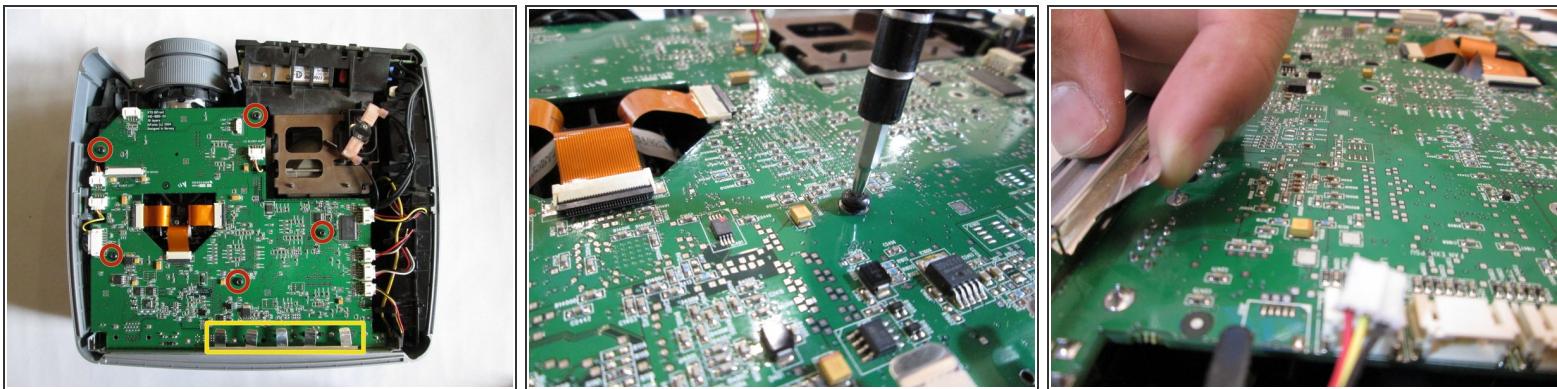

- Unplug the speaker wire from the circuit board by simultaneously squeezing the sides and pulling.
- Pull on the brown tabs located at the sides of the white plastic ribbon holder and pull the ribbon out.
- Pull the top cover back.

Step 4

- Remove the cables from the white tabs.

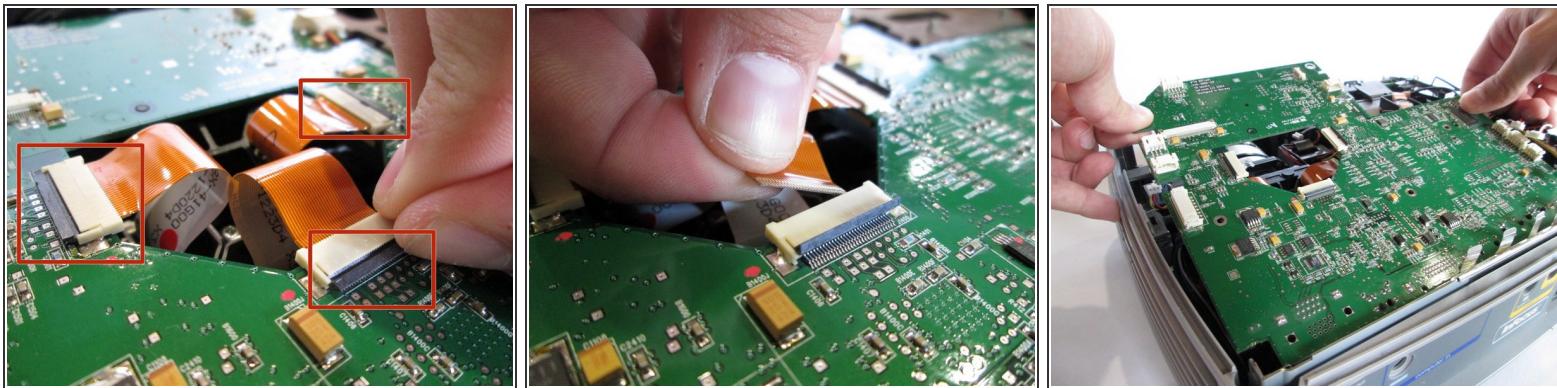

Step 5

- Remove the five 5mm screws located throughout the motherboard with the screwdriver. Use the T10 Torx screwdriver head.
- Pull up on each metal tab located at the rear of the projector. There are 5 tabs.

⚠ Do not pull up on the metal tabs too hard or too fast because they can break easily.

Step 6

- Remove the three gold ribbons by flipping up the black tabs that hold the ribbon in place.
- Pull the ribbons out carefully and place them under the main board.
- Carefully lift the entire main board up.

To reassemble your device, follow these instructions in reverse order.
