🔧 TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)

Step 1 — Internal Monitor Components

- Using the plastic opening tool, remove screen protector from front of monitor.

Step 2

- Remove the six 4mm screws using a size 00 Philips head screwdriver.

- Remove the screen, exposing the circuit board.

- Turn device over to expose rear circuit board.

Step 3

- Disconnect speaker from monitor for ease of access by unplugging wire.

Step 4 — Power Button

- The power button is located at the top of the device.

Step 5

- Remove the button by picking it up out of the hole it is connected to.

Step 6

- Insert a new button by placing the small end in the hole to connect the button to the device.

To reassemble your device, follow the instructions in reverse order.
