Step 1 — Back Case

- Slightly pry open one corner of the device by using your finger nail to separate the screen from the back case.
- Use an opening tool to carefully detach the back case from the tablet. Start by inserting the tool where your fingernail opened a gap, and work around all four sides of the device.

(i) There will be a slight click noise as you free each tab.

- Once the case is completely free, carefully lift it and place it face up on the workstation, being cautious not to damage the speaker wires connecting the two halves.
