Step 1 — Battery

- Use the blue iFixit opening tool to remove the backing of the device.

- Wedge the tool in the crease between the device backing and screen.

Step 2

- Disconnect the larger ribbon that runs along the top of the battery and connects to the motherboard.

- Lift up the connector by pulling it up with your fingernail. The ribbon will then be released and you can detach it.

Step 3

- Detach the five colored wires that connect the battery to the motherboard.

- Use two fingers and place one on either side of the white plastic encasing the wires.

- Pull on this piece to release it from the motherboard.

- ⓘ Now the battery is detached from the motherboard.

Step 4

- ⓘ The battery is now only connected to the device by the glue on the bottom.

- ● Use the iFixit opening tool to wedge the battery off of the device. You will have to use some force to pry the battery off of the device.

- ⓘ Now that your battery is removed it is ready for replacement.

To reassemble your device, follow these instructions in reverse order.
