Step 1 — Back Casing

- Insert a plastic opening tool into the seam between the back casing and the screen to separate the back casing from the tablet.

- ⚠ You may need to use a metal opening tool for extra prying power, but beware that it can scratch your device or damage the internal components if the tool is inserted too deep.
- ⓘ You will hear the tabs pop as you separate the back casing around the tablet.

This document was generated on 2019-09-17 05:57:31 PM (MST).

Step 2

- Lift the back casing away from the rest of the device which should include the exposed circuit board and screen.

- Set the casing aside.

Step 3 — Cameras

- Use a plastic opening tool to flip up the black strip that is holding the orange camera ribbon near the module on the circuit board labeled "front camera" in white print.

- Repeat this action on the orange camera ribbon near the module on the circuit board labeled "back camera" in white print.

Step 4

- Use tweezers to gently pull on both orange camera ribbons in the opposite direction in which they are connected until they disconnect from the modules on the circuit board.
Step 5

- Peel off the grey tape covering the ribbons, in order to separate the cameras and their respective ribbons from the rest of the device.

⚠️ Do not use excessive force while removing the tape to prevent tears in the ribbons.

Step 6

- Use a a plastic opening tool to pry out the back camera at the top of the circuit board.

To reassemble your device, follow these instructions in reverse order.
