

# Insignia Flex 8 Screen Replacement

This guide will enable you to replace a broken on your Flex 8 tablet.

Written By: Tyler Tyrrell

## INTRODUCTION

This process is simple once the tablet is disassembled and requires only requires a prying tool.

### TOOLS:

- [Phillips #00 Screwdriver](#) (1)
- [Plastic Cards](#) (1)

## Step 1 — Circuit Board

- ⚠** Turn off the power to your tablet to avoid injury.
- ℹ** Position the tablet so that the screen is face down and the power button is located in the upper left hand corner.
- Hold down the power button for five seconds until the tablet powers down.

## Step 2

- Remove the back casing from the screen by sliding a credit card or a similarly thin but firm object in between the casing and the screen.
- You may need to use a spudger to initially create separation between the screen and the casing.
- Run this object around the perimeter of the tablet until there is separation between the casing and the screen.
- Remove the back casing and set aside.

## Step 3

- Peel tape off of ribbon connectors. Starting at the power button, work clockwise around the tablet.

## Step 4

- To remove the camera ribbon cable, lift the flap using a spudger.
- Pull the ribbon directly back to release it.

## Step 5

- Remove the second ribbon cable by prying up the black flap using a spudger.
- Pull the ribbon cable horizontally directly away from the battery.

## Step 6

- Remove the final ribbon cable by pulling back the two black tabs on either side of the ribbon cable.
- Pull the ribbon horizontally directly away from the battery.

## Step 7

- Unscrew the thirteen 4.75mm screws around the perimeter of the tablet using a PH 00 screwdriver.

## Step 8

- Unscrew the four 3.75mm screws and plastic washers using a PH 00 screwdriver.
- Lift up the circuit board.

## Step 9

- Unscrew the final two screws that were underneath the circuit board.
- *(i)* These screws are near the charging port and USB adapter.
- *(i)* These screws are also 3.75mm and can be interchanged with the second set of screws only.

## Step 10

- Lift the circuit board and black internal mounting piece away from the screen.
- Set the circuit board aside.

**⚠** Be careful of the soldered antenna as you separate the pieces.

**⚠** Be careful of the soldered ribbon that is connected to the power source. This ribbon is fragile.

## Step 11 — Screen

- Slide the spudger in between the silver screen and the black border

## Step 12

- Pry up the LCD display and lift it away from the plastic screen.

To reassemble your device, follow these instructions in reverse order.
