INTRODUCTION

If you experience any difficulties with charging or playing music through an auxiliary cable, you may need to replace your JBL Pulse 2 speaker's auxiliary and micro USB ports.

TOOLS:

- [Tweezers \(1\)](#)
- [Phillips #1 Screwdriver \(1\)](#)
- [Metal Spudger \(1\)](#)
- [Spudger \(1\)](#)
- [Soldering Workstation \(1\)](#)

Step 1 — Battery

- Remove the rubber rings from either end of the device.
- If there is difficulty in lifting the rings from the device, use the metal spudger.

Step 2

- Remove the four 4.8mm Phillips #1 screws from each end of the device with the Phillips head screwdriver.
- Lift the end pieces off of the device.

Step 3

- Remove the four 9.5mm Phillips #1 screws from each end of the device.

Step 4

- Peel one end off and slowly draw it across the length of the device until you get to the other side.

Step 5

- Remove the four 7.9mm Phillips #1 screws along the black centerpiece of the device between the camera and the auxiliary port.
- Lift up the casing and circuit board but do not try and remove the ribbon wires.

Step 6

- Remove the cover from the end that the ribbon wires are attached to. It should peel off easily.

Step 7

- Unlatch the mechanism holding the ribbon wires in place, then disconnect them from the motherboard.
- To access the wires, remove some of the black glue holding them in place with the spudger.

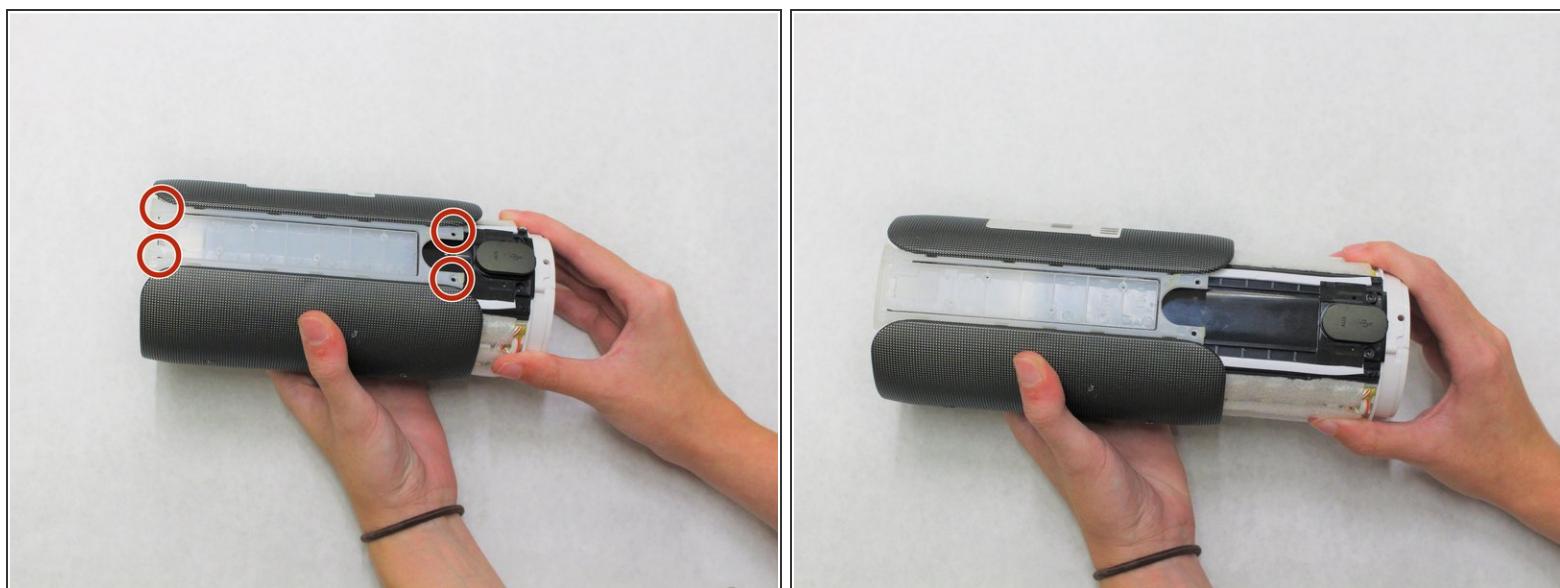

Step 8

- Slowly pull the ribbon wires out from the outside.

 If there is too much resistance, remove more of the black glue.

Step 9

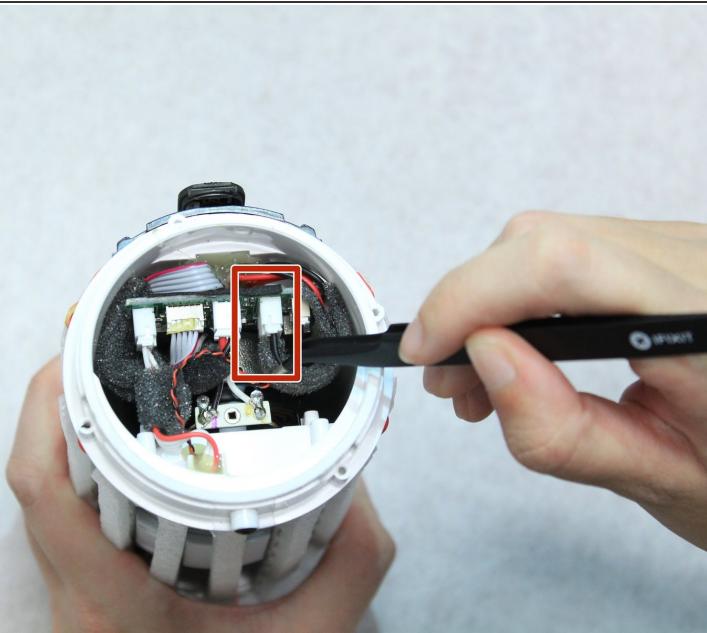

- Remove the four 7.9mm Phillips #1 screws around the edges of the center piece.
- Slide the outer casing off away from the auxiliary and micro USB port.

Step 10

- Remove the other end of the device to access the wiring underneath it.

Step 11

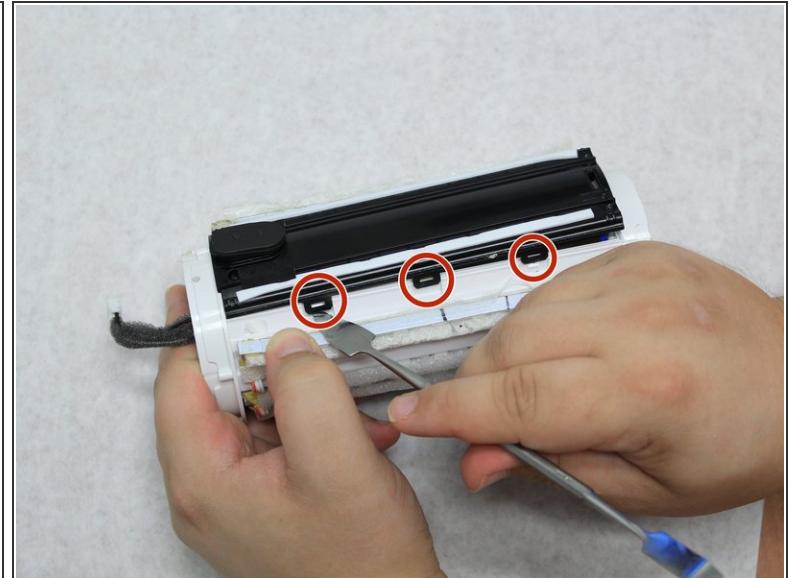

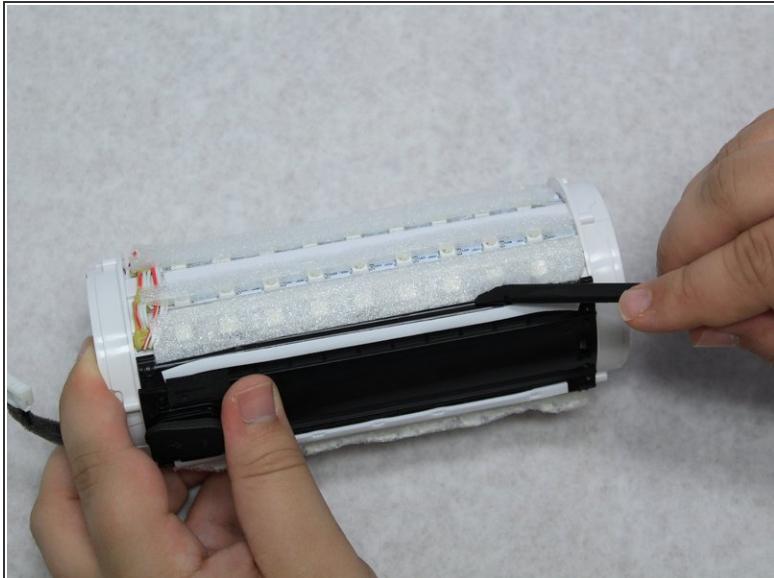

- Use the angled tweezers to disconnect the battery from the motherboard. It will take some work to remove this piece.

Step 12

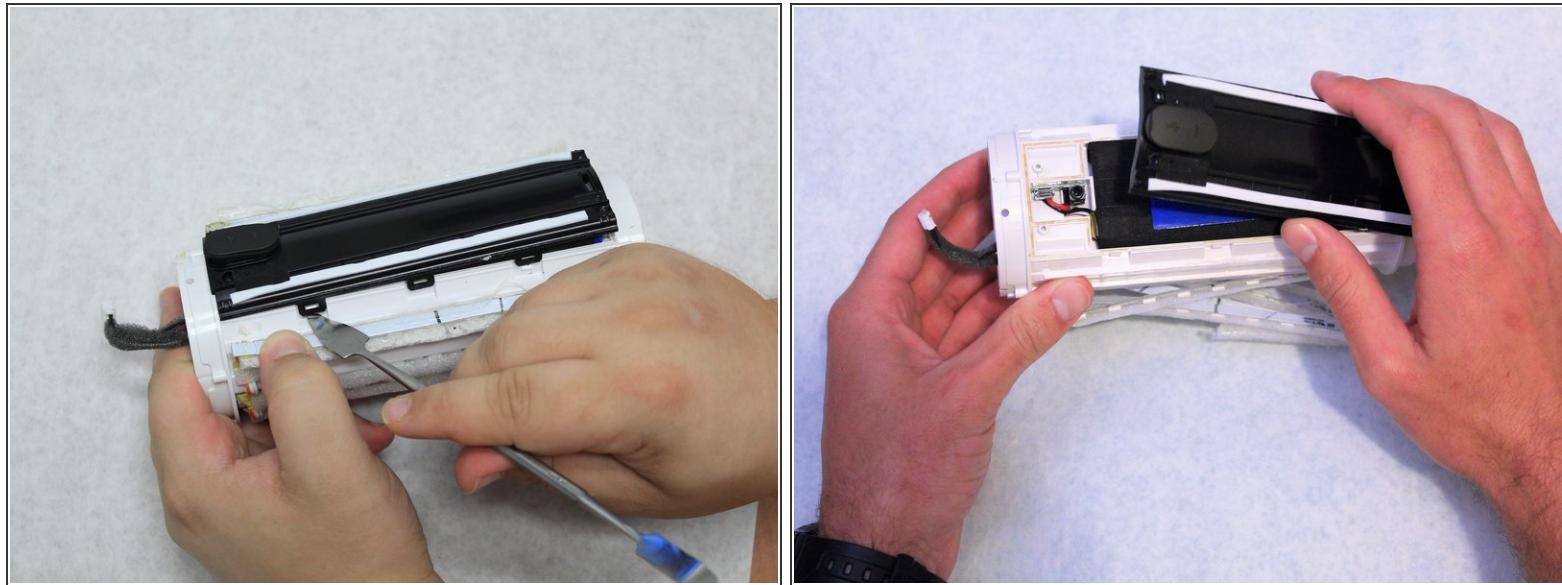

- Remove the four 7.9mm Phillips #1 screws from the black centerpiece of the device.

Step 13

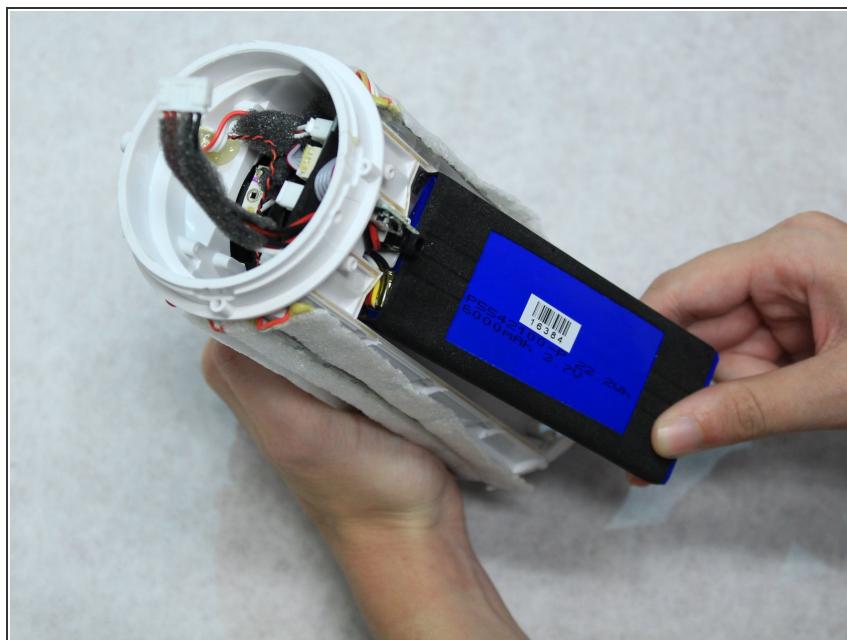

- Use the spudger to reach under the sides of the black centerpiece to access the six latches, three of which are on each side.

Step 14

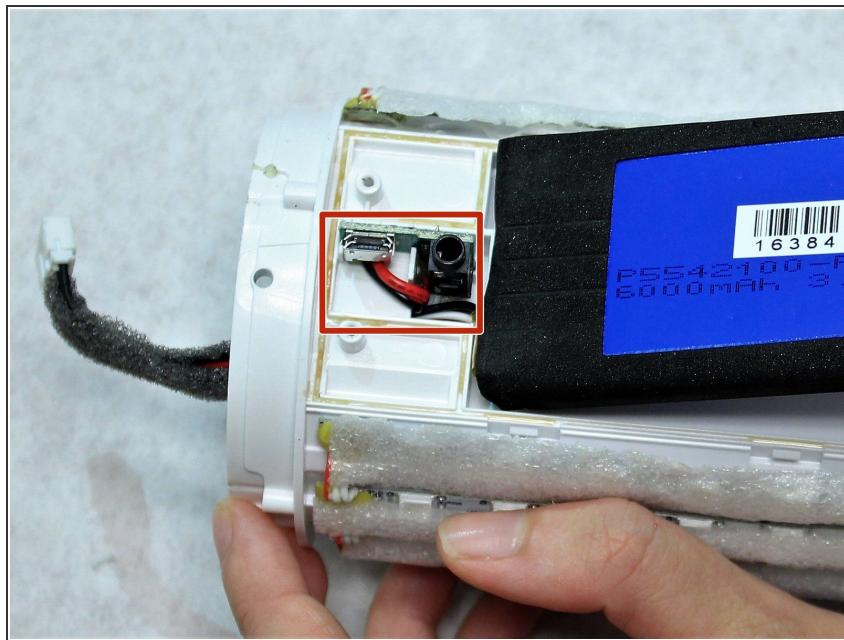

- Lift the black centerpiece off with the metal spudger to reveal the battery underneath.

Step 15

- Use a hot air gun to soften the hot glue in order to fully remove the battery.

Step 16 — Auxiliary and Micro USB Port

- Remove the solder on the micro USB and Auxiliary port wires to disconnect them.

To reassemble your device, follow these instructions in reverse order.
