Step 1 — Button Board

- Use a plastic opening tool to pry around the edges of the circular rubber panel.

Step 2

- Once the edges are loose, pull off the rubber button panel completely.

- New adhesive will have to be applied when reassembling.
Step 3

- Use your plastic opening tool to pry the button board loose by lifting the edges.

Step 4

- Lift the button board, exposing the attached cable.

- ⊡ New adhesive will have to be applied when reassembling.

Step 5

- Pull black piece on top of socket away from board to loosen, then detach the cable.

To reassemble your device, follow these instructions in reverse order.
