

Jura Impressa S85 Water Reservoir Seal Replacement

Replace the water reservoir seal in your Jura Impressa S 85

Written By: VauWeh

INTRODUCTION

Dripping water out of the joint between water reservoir and machine is an annoying issue. The water reservoir seal should be replaced. This is a very easy fix, you even need not open the Impressa.

TOOLS:

- [Large Needle Nose Pliers](#) (1)

PARTS:

- [New Item](#) (1)

Step 1 — Water Reservoir Seal

- Remove the water reservoir.
- Turn the Jura on its side to have access to the bottom plate
- The water connector is protected by a plastic cover, which is secured by two plastic rivets.
- Use pliers to squeeze the rivets and push them up.
- Carefully pry up the plastic cover.
- Give some food-proof lubricant to the new seal and replace it.

To reassemble your device, follow these steps in reverse order
