

KLH Speaker Tweeter and Driver Replacement

Replace the tweeter and driver of a KLH bookshelf speaker.

Written By: Mark Lee Hensley

INTRODUCTION

Use this guide to replace the tweeter and driver of your KLH bookshelf speaker.

TOOLS:

- [Phillips #2 Screwdriver](#) (1)
 - [Flathead Screwdriver or sudger](#) (1)
 - [Phillips #1 Screwdriver](#) (1)
 - [8" Needle Nose Plier](#) (1)
-

Step 1 — Tweeter and Driver

- Remove the front speaker mesh to expose the speakers. The mesh will lift off without the use of tools.

Step 2

- Once the mesh is removed, begin to remove the screws securing the small upper speaker/tweeter with a #1 Phillips head screwdriver.

Step 3

- Once the screws have been removed, pry out the small upper speaker with an opening tool.
- ⓘ Take care not to damage the speaker's wooden body while prying the speaker out.

Step 4

- After you have removed the speaker, disconnect the red and brown wires from the speaker.
- ⓘ You might require needlenose pliers to do this.

Step 5

- Remove the speaker from its plastic bezel using a #1 Phillips head screwdriver.

Step 6

- For the larger bottom speaker, the same steps will be taken to remove the speaker.
- Remove the four screws securing the speaker.

Step 7

- Once the screws are removed, remove the speaker by either prying up from the top, or pushing the speaker through by pushing on the bottom of the speaker.

Step 8

- Once the speaker is removed, remove the black and white wires.

To reassemble your device, follow these instructions in reverse order.
