INTRODUCTION

A blown fuse can render the KDC-BT565U unusable. Replacing of a dead fuse with a proper 10 amp car fuse can restore the unit to working condition. This guide shows you how to replace this fuse.

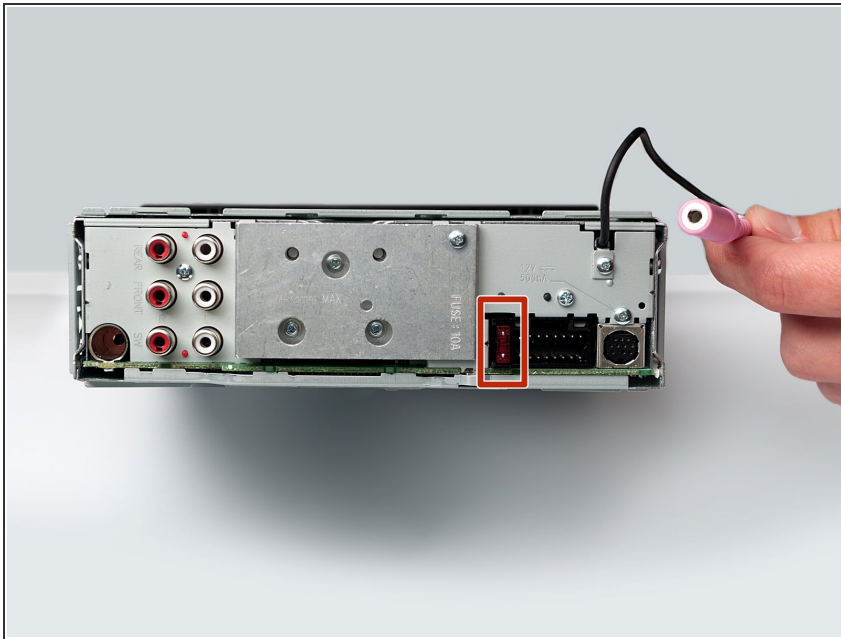

NOTE: This requires the KDC-BT565U unit to be unmounted from the car. This may require specialist assistance.

PARTS:

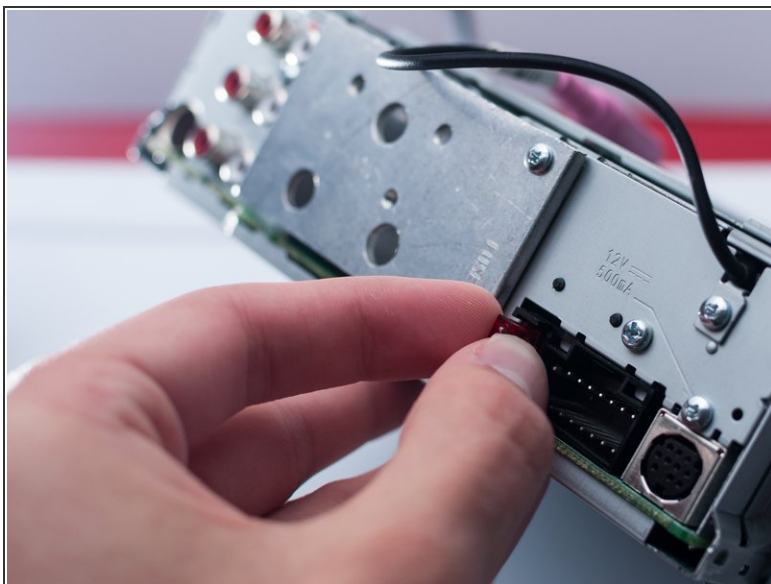

- 10 amp fuse (1)
-

Step 1 — Fuse

- The fuse can be found on the back of your radio indicated by the red square in the photo.

Step 2

- Pinch the fuse head with your fingers or a gripping tool to remove. This may require some force.
- Reinsert a fuse that has the same amperage of the fuse that was previously removed (10 amps).

To reassemble, follow these instructions in reverse order.
