

# Kindle Fire HD Front Facing Camera Replacement

This guide will show you how to replace the front facing camera on your Kindle Fire.

Written By: Matthew Hodgdon

 **TOOLS:**

- [Phillips #00 Screwdriver](#) (1)
- [iFixit Opening Tools](#) (1)

 **PARTS:**

- [Kindle Fire HD 7" \(2012, 1st Gen\) Front Camera](#) (1)

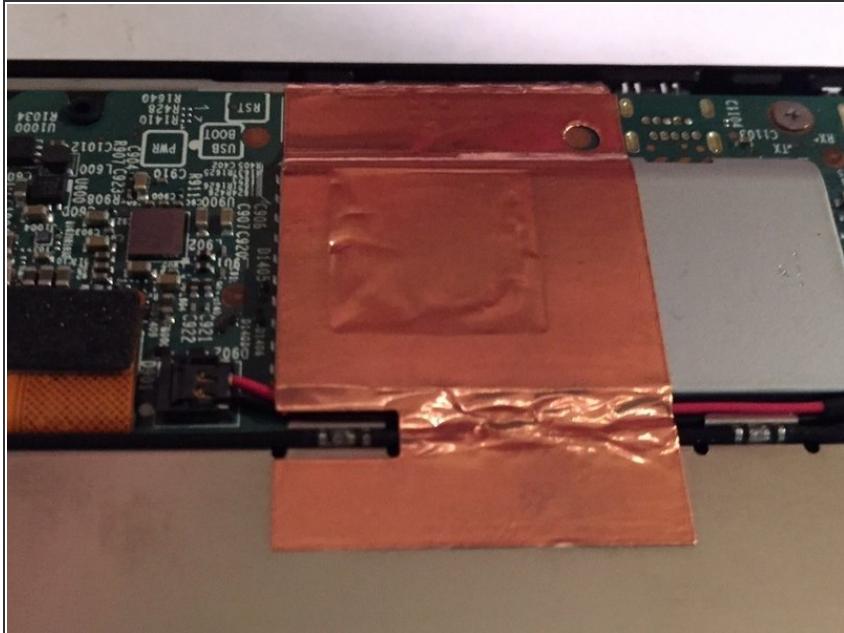

## Step 1 — Open the Kindle

- Wedge a plastic opening tool into the lower right corner of the Kindle Fire.
- Lift up until you hear a slight popping noise.
- Repeat along the perimeter of the device to release the clips securing the case halves to each other. Remove the back cover.

⚠ The Kindle Fire could possibly have tape on the inside. Check for tape before removing the back cover.

## Step 2

- If your device has copper tape attached to the battery, carefully peel it off the battery.

## Step 3

- Locate the antenna cable connector which is easier to find if you look for the gold tipped black wire that surrounds the battery.
- Lift and pull up the power connector cable that surrounds the battery

## Step 4 — Remove Screws

- Locate and unscrew the four 3 mm screws using the Phillips #00 screwdriver.
- Unscrew the one T5 Torx screw using the special T5 Torx screwdriver head.
  - The 2 mm T5 Torx screw is located on the motherboard near the antenna clip.
  - If you aren't equipped with the T5 Torx screwdriver, you could try using your fingers, although it will be very difficult to remove it.

This document was generated on 2019-09-21 05:12:40 AM (MST).

## Step 5 — Detach Cable

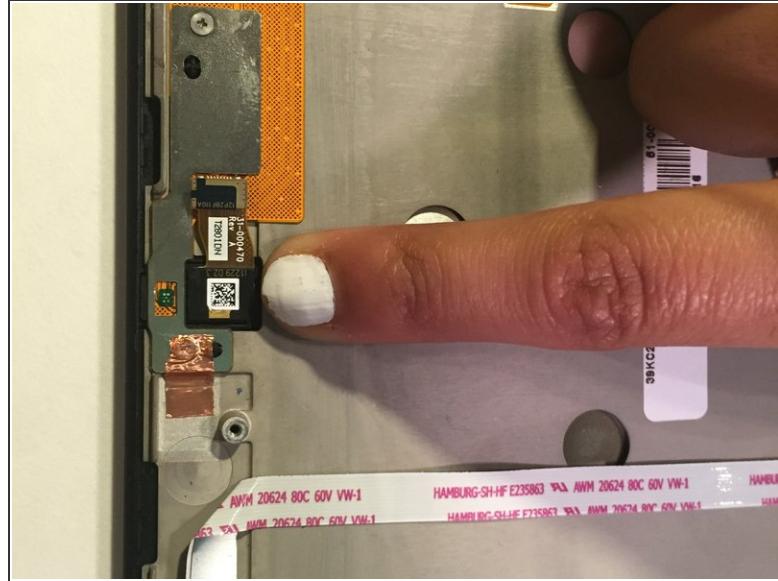

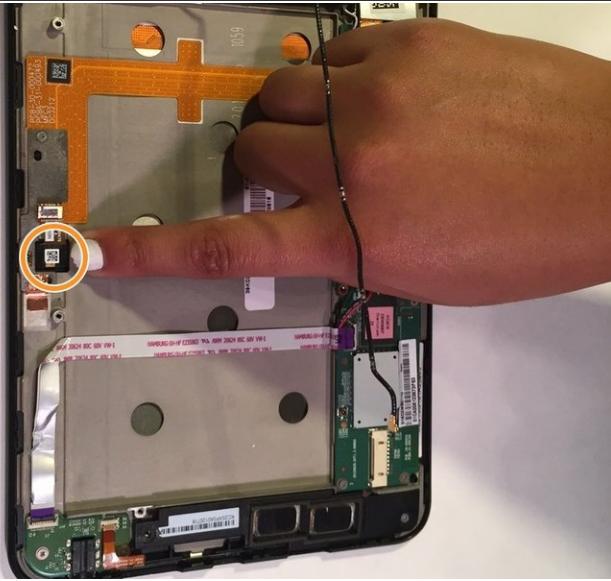

- Detach the plastic piece that connects the wires to the motherboard using the plastic opening tool.

## Step 6

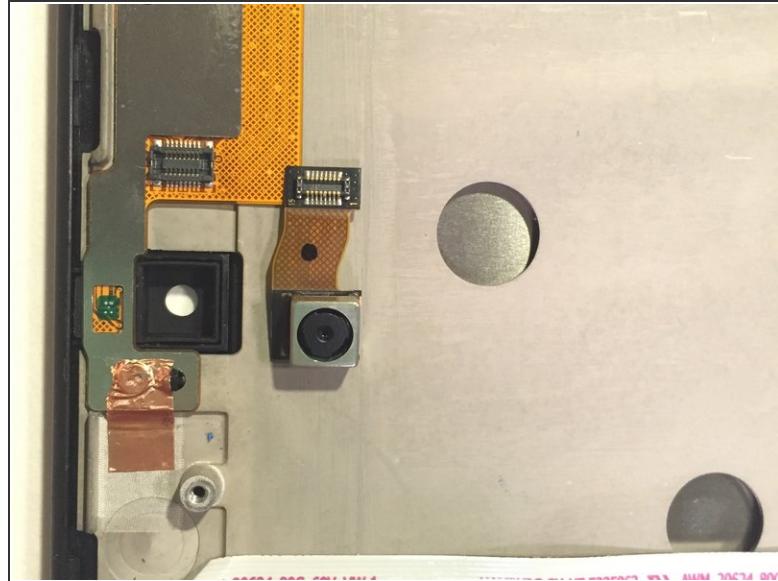

- Lift the battery out of the device with your finger or the plastic opening tool.

## Step 7 — Front Facing Camera

- After removing the battery, locate the camera.

## Step 8

- Use the plastic opening tool to carefully lift the camera up.
- Now you may lift the camera out of your device.

To reassemble your device, follow these instructions in reverse order.
