

# Kindle Paperwhite 1st Generation LED Lights Replacement

Use this guide to install new LED lights into your Kindle Paperwhite.

Written By: Anthony Nahal

---

## INTRODUCTION

Having trouble reading in the dark? Replace the display's LED lights if the lighting on your Kindle is uneven or absent.

---

### **TOOLS:**

- [Phillips #2 Screwdriver](#) (1)
  - [iFixit Opening Tools](#) (1)
  - [Spudger](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Case

- Using a spudger or plastic opening tool, gently pry the bezel from the screen. It is easier to start in the corners and work your way around the bezel.

⚠ Do not insert the spudger too far under the bezel; it could easily damage the screen.

## Step 2

- Remove the eleven 3.0 mm Phillips screws surrounding the midframe.

ⓘ At the top of the display, a strip of black tape covers one screw.

## Step 3

- Lift the midframe out of the case.

❗ If the midframe is stuck, slide it to the left first, and then lift it out.

## Step 4 — Battery

- Turn over the midframe to locate the battery.
- Remove the three Phillips 3.0 mm screws securing the battery to the midframe.

## Step 5

- Gently lift the battery from the bottom, and slide it out of the midframe.

## Step 6 — Motherboard

- ❗ With the case and battery removed from the midframe, begin removing all cables attached to the motherboard.
- ❗ Place the device so the midframe's backside faces up. Start with the cable on the bottom left corner.
  - Use a spudger to lift up the white locking cable tensioner and slide the flex cable out.
  - Proceed counterclockwise to the next cable and repeat. Small flex cable on the bottom won't need cable tensioner lifted, just carefully pull out.

## Step 7

- Remove the white flex cable by gently lifting the yellow plastic connector.

## Step 8

- Remove the yellow anti-static tape from the display ribbon cable connector.
- Use a spudger to lift up and disconnect the cable tensioner.

## Step 9

 Use a Philips screwdriver to remove the seven 3.0 mm Phillips screws securing the motherboard:

- Three silver screws with silver washers
- Two silver screws with no washers
- One black screw with a golden washer
- One black screw with a square washer

## Step 10

- Remove the motherboard.

## Step 11 — LED Lights

- Use a pair of tweezers to remove the white strip of tape that covers the LED lights.

## Step 12

- Use a spudger to gently remove the plastic screen from the display.
- ⓘ The plastic screen is held on by a thick layer of glue. Be patient when lifting the screen to avoid bending or breaking the thin plastic.

## Step 13

- Once the outer screen is removed from the Kindle, gently use your fingers to pull off the LED lights.

To reassemble your device, follow these instructions in reverse order.
