

Kingston HyperX Cloud II Ear Padding Replacement

How to replace ear padding in a Kingston HyperX Cloud II.

Written By: Alex Derkautsan

INTRODUCTION

If your Kingston HyperX Cloud II ear padding is worn or uncomfortable, use this guide to replace the ear padding. The headphone padding is made to keep the headset comfortable around the ears when being worn. If the padding has any signs of wear and tear, it could lead to discomfort during use.

Step 1 — Ear Padding

- Start on one side of the padding, and peel away from the center enough to get the lip out of the groove of the cup.
- Gently work around the cup until the cup is completely out of the lip and detached.

To reassemble your device, follow these instructions in reverse order.
