

# Kodak Easyshare C813 Logic Board Replacement

Replace the Logic Board in your Kodak Easyshare C81.3

Written By: Susan Marano

## INTRODUCTION

This guide demonstrates how to replace the camera's logic board.

### TOOLS:

- [Anti-Static Wrist Strap \(1\)](#)
- [Desoldering Braid \(1\)](#)
- [Phillips #00 Screwdriver \(1\)](#)
- [Soldering Workstation \(1\)](#)
- [iFixit Opening Tools \(1\)](#)

## Step 1 — Battery

- Turn off camera by firmly pressing the power button that is located on the top of the camera near the selector dial.

## Step 2

- Press thumb firmly on battery door and slide it in the direction of the arrow.
- Lift thumb allowing the door to swing open.

## Step 3 — Back Cover

- Before removing back cover, it is advisable to use an [anti-static wrist strap](#) to prevent damage to electronics.

## Step 4

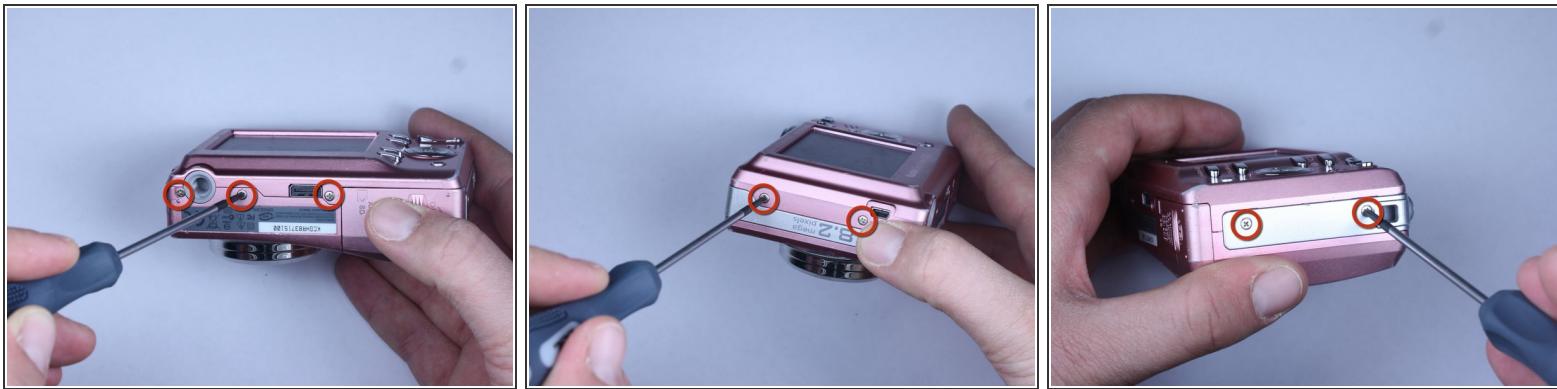

- Turn the camera off by firmly pressing the power button located on top of the camera.

## Step 5

- Locate the 7 screws holding the back cover on.
  - Three screws are located on the bottom of the camera.
  - Two screws are located on the side shown in the photograph.
  - Two final screws are located on the opposite side shown in the photograph.

## Step 6

- Remove all 7 screws:
  - Hold the camera firmly with one hand so that you can still see a screw.
  - Place the Philips 00 ([Found here](#)) screwdriver into the screw.
  - Turn the screwdriver to the left until it is free.
  - Repeat for the remaining screws.

## Step 7

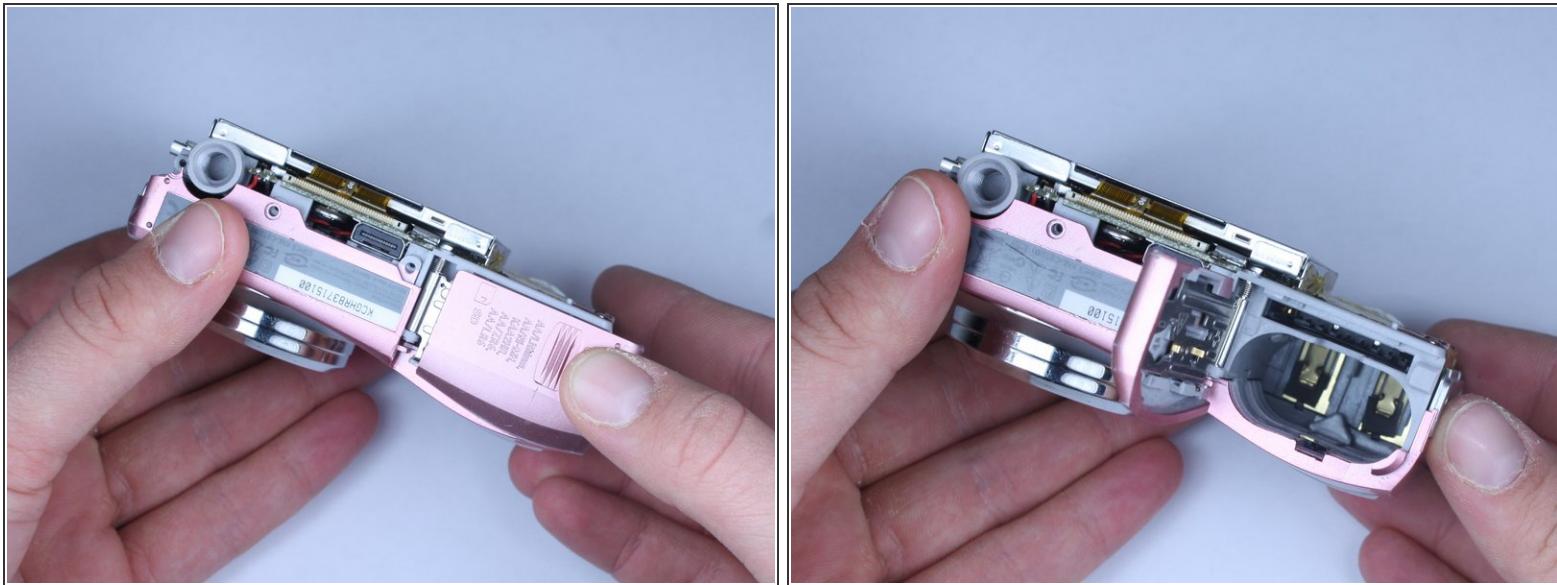

- Use [plastic opening tools](#) to slightly open the side of the case.
- Insert a plastic opening tool and apply pressure to the internal three tabs at the top.
  - The first two are near the words "3X Optical Zoom".
  - The third is near the shutter button.

## Step 8

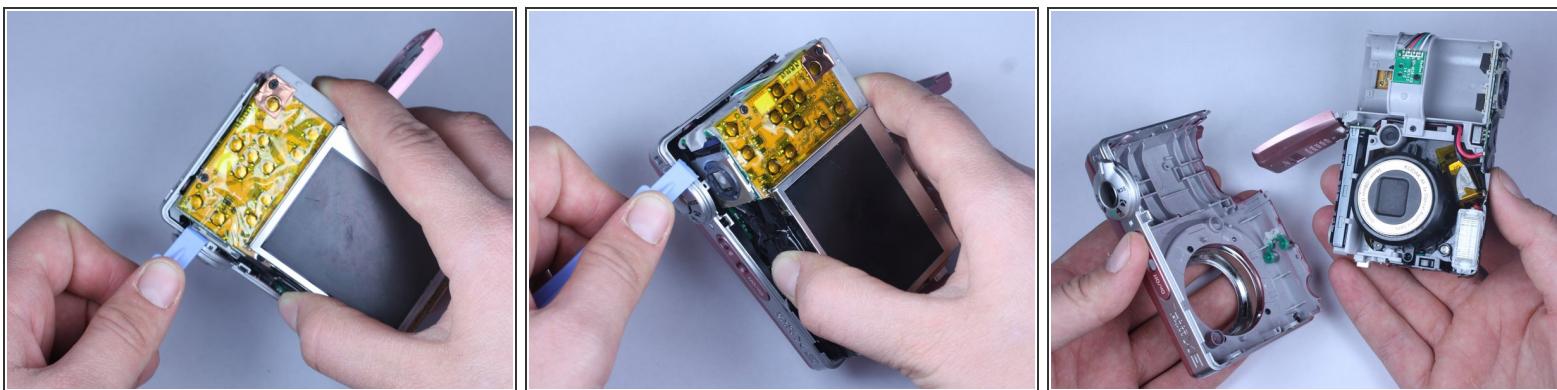

- Gently pull apart the back cover from the rest of the camera.
- Make sure there are no more screws or tabs keeping the cover on.
- Use the plastic opening tool to separate any sides still closely connected.

## Step 9 — Front Cover

- Open the battery door.
- Press thumb firmly on battery door and slide it in the direction of the arrow.
- Lift thumb allowing the door to swing open.

## Step 10

- Use the plastic opening tool to lift the casing around the shutter button.
- Gently remove the front cover from the device.

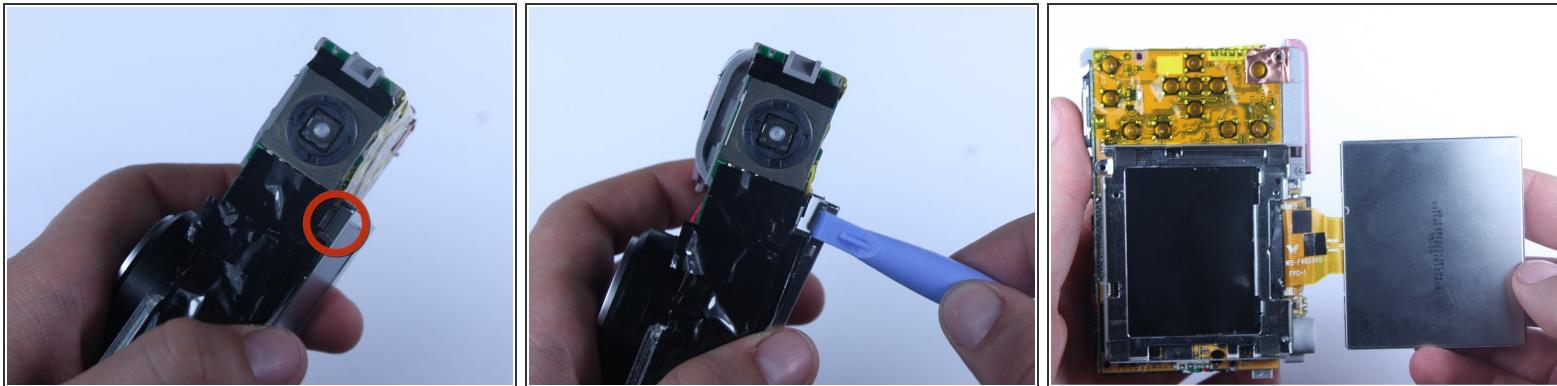

## Step 11

**⚠** Do not touch the terminals shown in the photo. These link to the capacitor which could shock you if not discharged.

- To discharge the capacitor follow this [guide](#).

## Step 12 — LCD

**i** Once the front cover is removed, the battery door maybe closed for convenience.

- Locate the exposed portion of the LCD screen.
- Use a wedge to free the LCD screen from the medal housing.

**⚠** Do not pull the screen away completely, it is still attached to the logic board via the yellow cable.

## Step 13

- Remove the screw at the upper right corner of the metal housing.

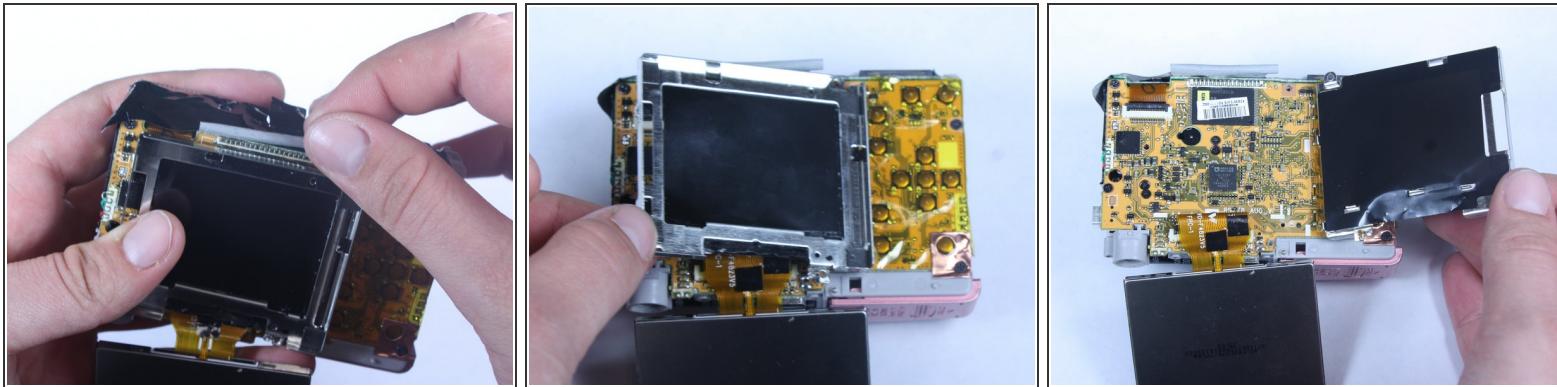

## Step 14

- Locate the 2 solder joints holding down the metal housing.
- Remove the solder.
  - Place wick on solder.
  - Place solder iron on wick

*(i)* The wick should be sandwiched between the iron and the solder.

## Step 15

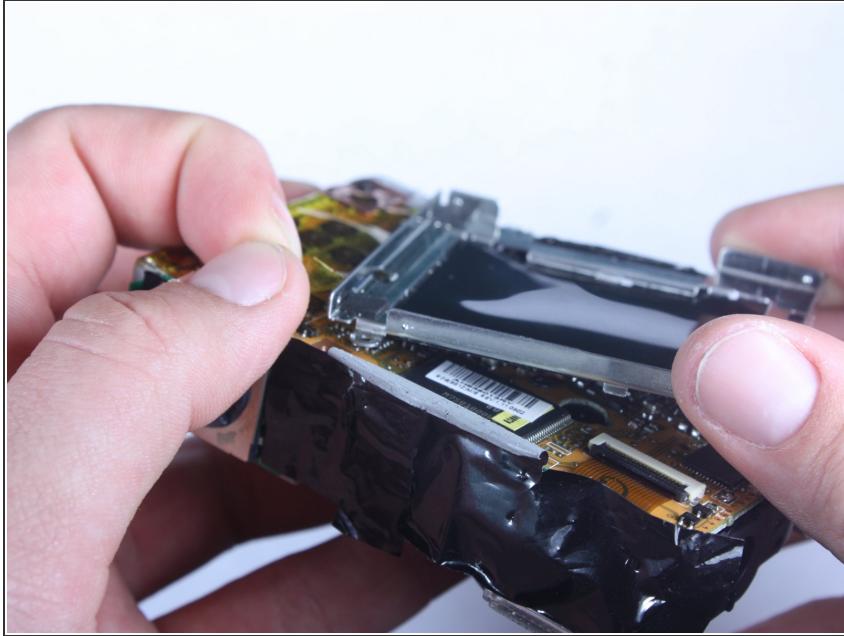

- Peel back the black tape from the metal housing.
- Lift the metal housing from the left so that it hinges on its right side.
- *(i)* The metal housing is still loosely attached on its right side.

## Step 16

- Locate black tab holding the LCD screen connector in the port.
- Use wedge or fingernail to lift the black tab.
- Pull the LCD screen connector out of the port.

## Step 17 — Logic Board

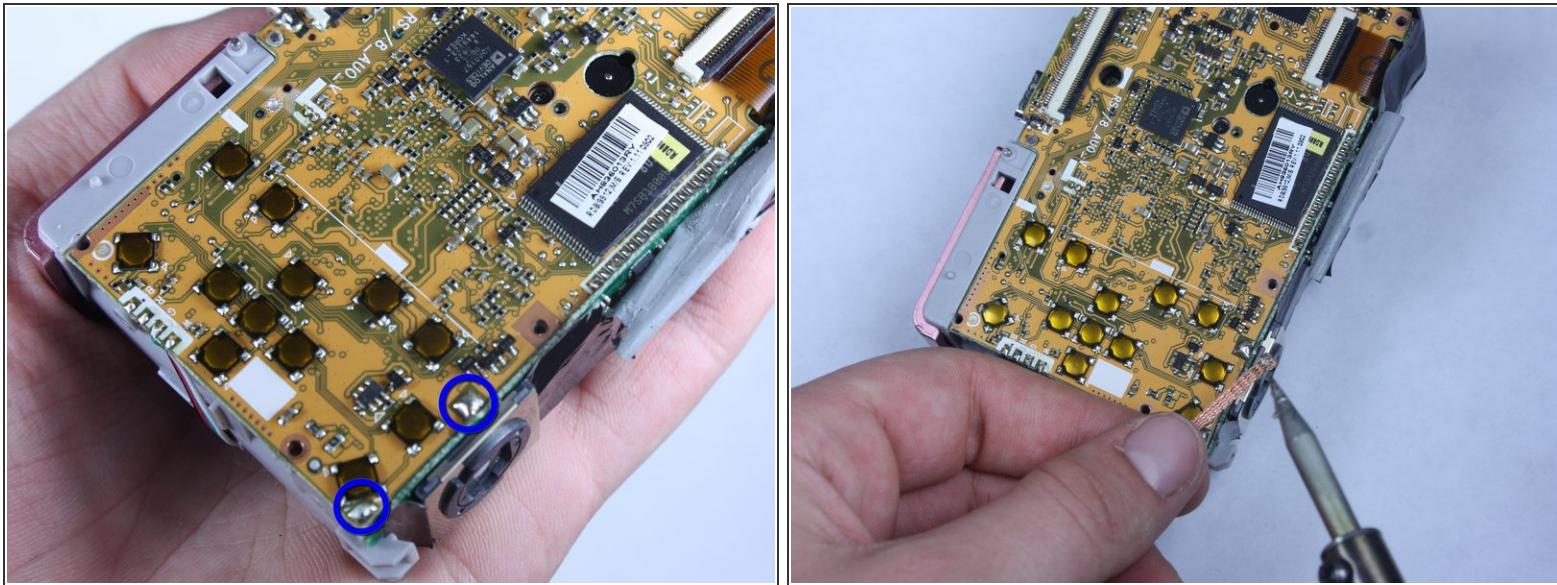

- Remove the metal housing from the logic board by carefully peeling the yellow tape off of the metal housing.

## Step 18

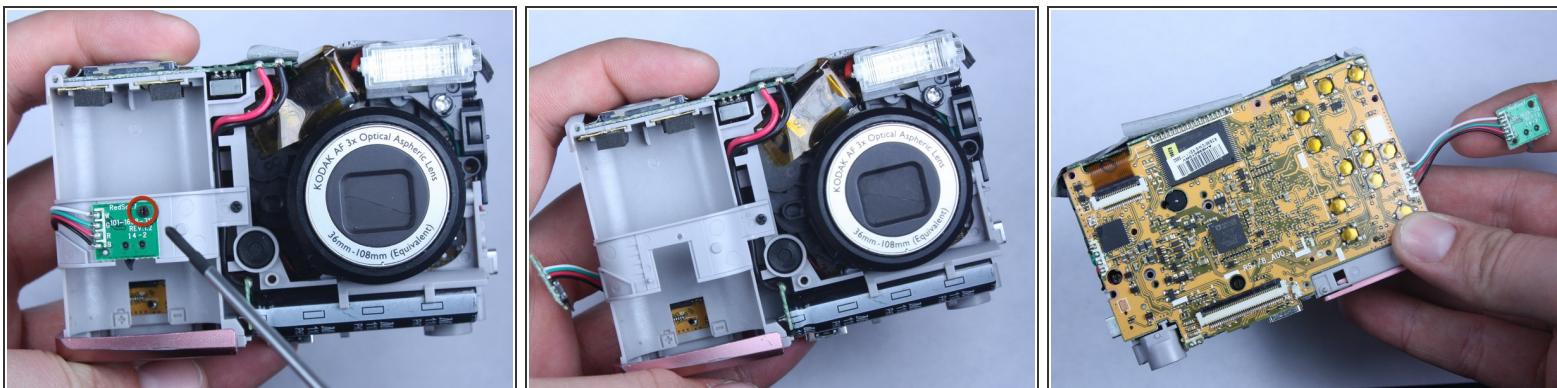

- Locate the 2 screws on the yellow tape.
- Remove the 2 screws.
- Remove the yellow tape.

## Step 19

- Locate the 2 solder joints near the shutter button.
- Remove the solder on both joints with the wick and soldering iron in the same manner as Step 11.

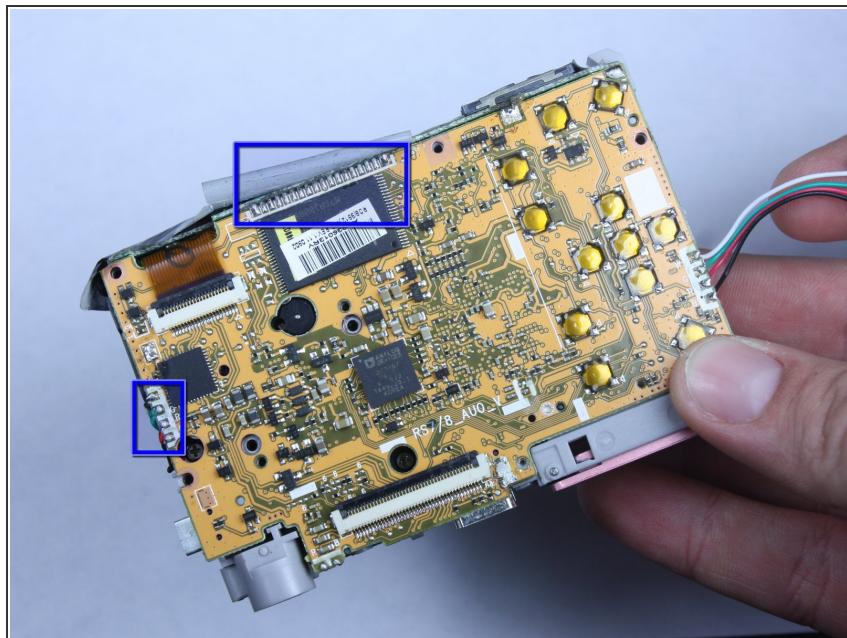

## Step 20

- Turn the camera over.
- Remove the screw holding the small green board.
- Lift the small green board.

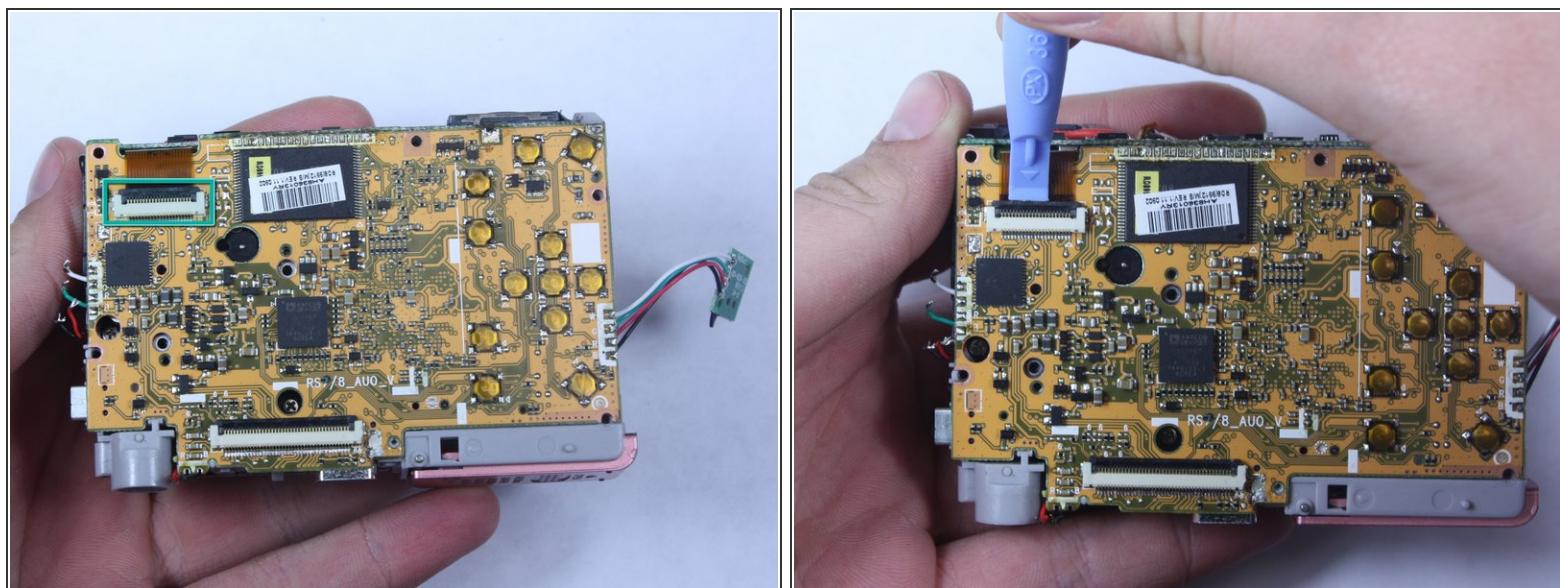

**⚠** The small green board is still attached to the logic board via wires.

## Step 21

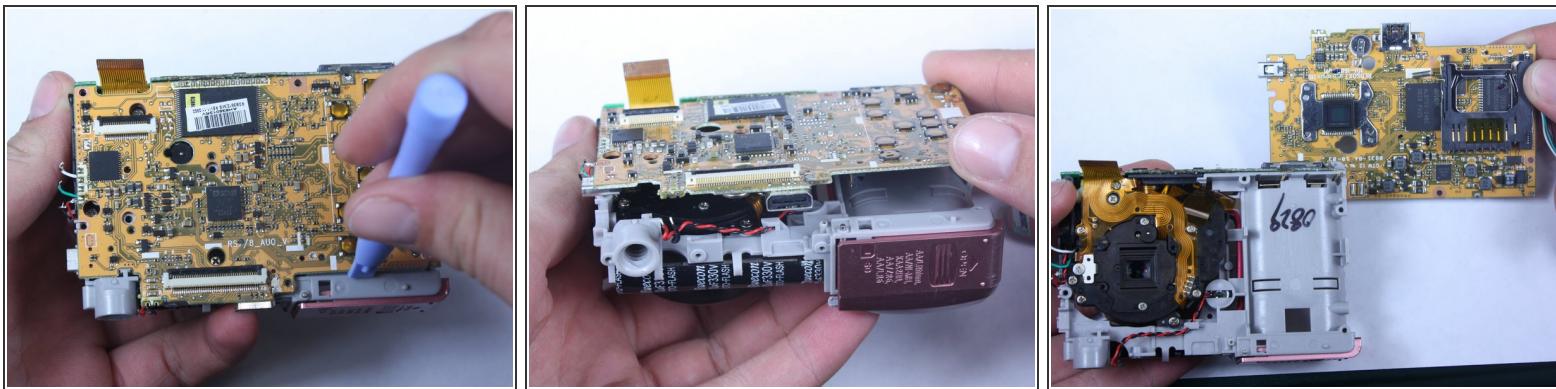

- Desolder the remaining 20 solder joints connecting the logic board to the camera.

## Step 22

- Locate the black tab holding the yellow cable in place.
- Use a plastic opening tool or fingernail to lift the black tab.
- Pull the yellow cable from the port.

## Step 23

- Use a plastic opening tool to lift the board from the camera.
- Continue to remove the board completely.

To reassemble your device, follow these instructions in reverse order.
