Step 5

- Locate the 7 screws holding the back cover on.
  - Three screws are located on the bottom of the camera.
  - Two screws are located on the side shown in the photograph.
  - Two final screws are located on the opposite side shown in the photograph.

Step 6

- Remove all 7 screws:
  - Hold the camera firmly with one hand so that you can still see a screw.
  - Place the Philips 00(Found here)screwdriver into the screw.
  - Turn the screwdriver to the left until it is free.
  - Repeat for the remaining screws.

Step 7

- Use plastic opening tools to slightly open the side of the case.

- Insert a plastic opening tool and apply pressure to the internal three tabs at the top.

  - The first two are near the words "3X Optical Zoom".

  - The third is near the shutter button.
Step 8

- Gently pull apart the back cover from the rest of the camera.

  - Make sure there are no more screws or tabs keeping the cover on.

  - Use the plastic opening tool to separate any sides still closely connected.

|

Step 9 — Front Cover

- Open the battery door.
  - Press thumb firmly on battery door and slide it in the direction of the arrow.
  - Lift thumb allowing the door to swing open.

Step 10

- Use the plastic opening tool to lift the casing around the shutter button.
- Gently remove the front cover from the device.

Step 11

⚠️ Do not touch the terminals shown in the photo. These link to the capacitor which could shock you if not discharged.

● To discharge the capacitor follow this [guide](#).
