

# LG Cosmos 2 Motherboard Replacement

Replacing the motherboard will take some care and time.

Written By: Nick White

## INTRODUCTION

The steps to this process straightforward and mostly involve removing screws.

### TOOLS:

- [iFixit Opening Tools](#) (1)
- [Tweezers](#) (1)
- [64 Bit Driver Kit](#) (1)

## Step 1 — Battery

- Insert the plastic opener into the slot at the top of the device.
- Apply gentle pressure with the plastic tool to pop the back case off.

## Step 2

- Use the plastic opener to lift, and remove, the device battery.

## Step 3 — Rear Case

- Use a screwdriver and corresponding bit to remove the six 2mm screws that are located along the edge of the rear case. Set the screws aside.

## Step 4

- Use the plastic opener to pry the rear case loose.
- (i)* This can be difficult. You will need to pry around the entire edge of the rear case, not just in one place.

## Step 5 — Motherboard

- Use a screwdriver and corresponding bit to remove the two 3mm screws that attach the motherboard to the front case. Set the screws aside

## Step 6

- Rotate the phone 180 degrees and use the plastic opener to lift the metal piece that covers the ribbon cable.

## Step 7

- Use the plastic opener to disconnect the ribbon cable.

## Step 8

- Use tweezers to disconnect the two cables that attach the motherboard to the case.

**⚠ Note:** Pull on the cables gently to prevent damage for future use.

## Step 9

- Remove the motherboard from the front case.

To reassemble your device, follow these instructions in reverse order.
