LG Dare Logic Board Replacement

Replacing a broken logic board in an LG Dare.

Written By: Haoyan Huang

INTRODUCTION

Use this guide to install a new logic board in your LG Dare.

🔧 TOOLS:

- Phillips #00 Screwdriver (1)
- iFixit Opening Tools (1)

Step 1 — Battery

- Remove the back cover by firmly pressing against the raised lip on the back panel. Slide the cover towards the top of the phone.

Step 2

- Remove the battery by placing your fingernail or a opening tool in the recessed edge and lift the battery out.

Step 3 — Logic Board

- Use the #00 screwdriver to remove the six 4mm phillips screws located around the edges of the phone.
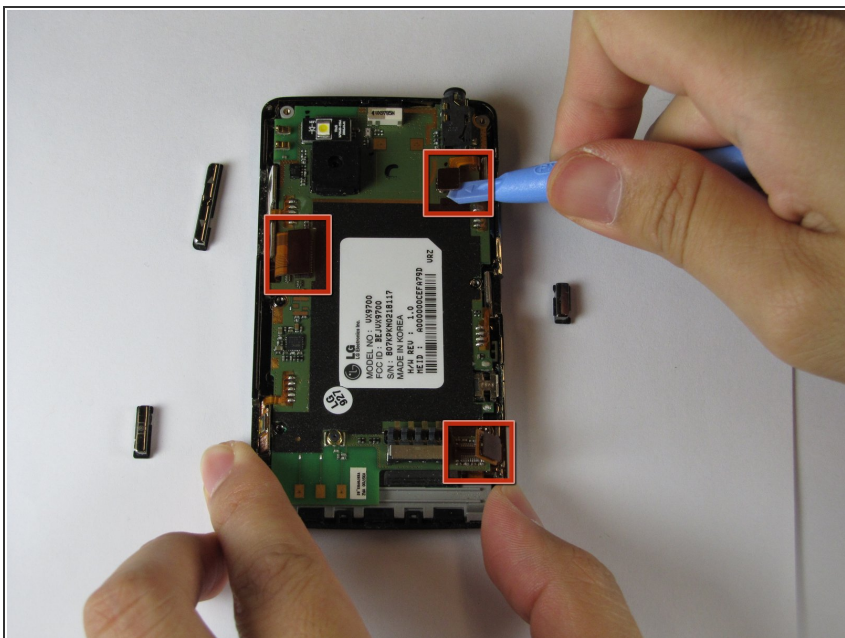

Step 4

- Lift the back plastic cover off by moving the opening tool around the edges of the phone.

- Wedging the opening tool in several places on the bottom of the phone will help release small tabs that hold the back to the front frame.

- ⓘ The side buttons may fall out when removing the back plastic.

Step 5

- Pull off the back plastic panel.

- Remove the buttons from the edge of the frame. The buttons are [lock], [volume control], [speaker], and [camera].
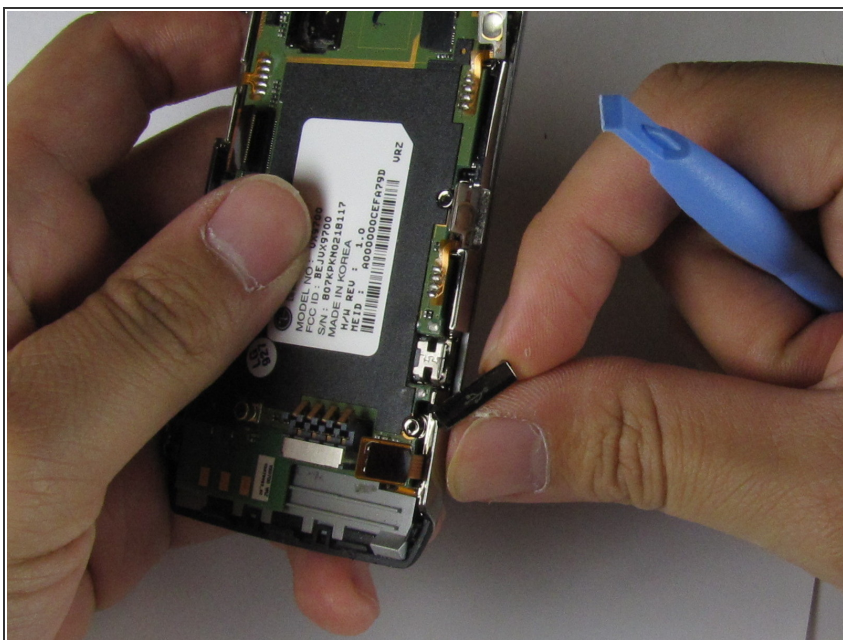

Step 6

- Disconnect the three ribbon connectors from the motherboard.

This document was generated on 2019-11-17 02:40:09 AM (MST).

Step 7

- Remove the LED.

- Remove the camera connector.

- Remove the camera sensor from the logic board. Squeeze the sides of the camera sensor firmly and pull straight up.

Step 8

- Open the USB port cover.

This document was generated on 2019-11-17 02:40:09 AM (MST).

Step 9

- Use the opening tool to lift up the green logic board in all areas and remove it.

- (i) The logic board may require some force to remove because it is taped to the plastic frame.

- (i) When removing the logic board, be careful not to tear any of the ribbon cables or side buttons.

To re-assemble your device, follow these instructions in reverse order.
