

LG T310 Teardown

This guide will walk through the steps of tearing down the LG T310 phone.

Written By: Andrew

 **TOOLS:**

- [iFixit Opening Tools \(1\)](#)
- [Phillips #00 Screwdriver \(1\)](#)

Step 1 — LG T310 Teardown

- Slide back cover down with hand in the direction of the arrow on the cover
- Gently remove back cover
- Remove the battery by inserting the plastic opening tool into the groove and gently prying it out

Step 2

- Remove all of the screws on the back of the phone using a Phillips head screw driver
- Slide out the SIM card from the phone

Step 3

- Using the plastic opening tool, pry off the shell of the phone, revealing the motherboard

Step 4

- Using the plastic opening tool, gently pry the motherboard out (while doing this be sure not to pull on the mother board as it is attached to the touch screen)
- Starting at the top left corner of the screen (with phone face down), insert your plastic opening tool and work down the left side.
- The screen should be loose now making it possible to remove it from the case by hand (try not to touch the actual screen, only the side or back).
- This completes the tear down of your LG-T310 Cookie

To reassemble your device, follow these instructions in reverse order.
