Step 1 — Disassembling Back Cover

- Carefully slide battery cover off in a downward direction.

- Using the plastic opening tool, remove the battery. Light force may be necessary.
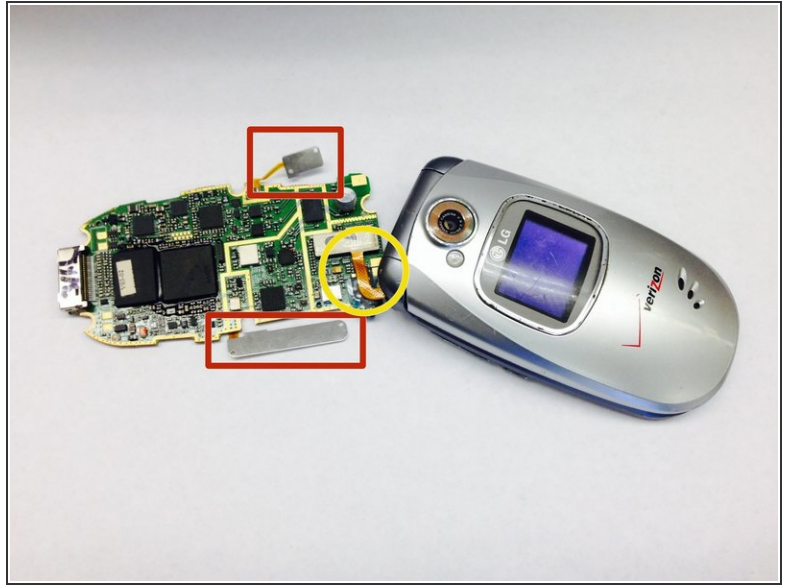

Step 2

- Using a Phillips #0 screwdriver, remove the five screws from the back cover and carefully set them aside.

Step 3

- Using the plastic opening tool, carefully lift the back cover off.

Step 4 — Keypad

⚠ Before touching anything inside the phone: it is crucial that you are very cautious when working around the wiring and sensor bars.

● Look to the following photo for the location of the two sensor bars.

● Without disconnecting the orange wire, carefully flip the computer chip over and lay flat on the table, exposing the keypad.

Step 5

- Carefully remove the keypad and replace with the new keypad.

⚠ If sensor bars behind the volume and camera buttons fall out, gently put them back in place behind the buttons.

Step 6

- Carefully set the computer chip back in place.

Step 7

- Place the back cover back on and secure it with the screws.

Step 8

- Insert the battery.

- Slide the back cover on the phone.
