INTRODUCTION

This guide will show you how to remove your Keyboard in order to replace with a new one of the same model.
🔧 TOOLS:

- iFixit Opening Tools (1)
- 64 Bit Driver Kit (1)

Step 1 — Battery

- Turn over laptop.

- Switch open the left battery lock.

- (i) If you are replacing inner components of the laptop, it is recommended to remove the battery first to avoid damage to the laptop.
Step 2

- Hold the right battery lock open with one hand while removing the battery itself with the other.

Step 3 — Back Panel

- Loosen the five Philips screws that secure the panel.

- (i) The screws do not actually fully remove from the panel. Loosening them as much as you can will be enough to disconnect them from the laptop.
Step 4

- Prop open the cover with a plastic opening tool.

- ⚠ If the cover does not come off easily, do not force it. Make sure all screws are loosened.

Step 5 — Keyboard

● Remove the three 3 mm Phillips screws holding the keyboard in. These screws are designated by an imprinted keyboard picture next to them.
Step 6

● Carefully pry off the keyboard with your plastic opening tool , moving along the edges.

⚠ DO NOT immediately remove the keyboard as it is still connected underneath by a wire.

Step 7

- Carefully lift the keyboard.

⚠ The keyboard is still connected to the laptop. Lift it slowly.

- Turn over the keyboard to locate the keyboards ribbon cable.

Step 8

- Use the plastic opening tool to lift open the ribbon connector that is holding the ribbon cable in its slot.

Step 9

- Remove the cable from its slot.

⚠ If the cable does not come out easily, ensure that the black ribbon has been completely released.

To reassemble your device, follow these instructions in reverse order.
