🔧 TOOLS:

- Phillips #2 Screwdriver (1)
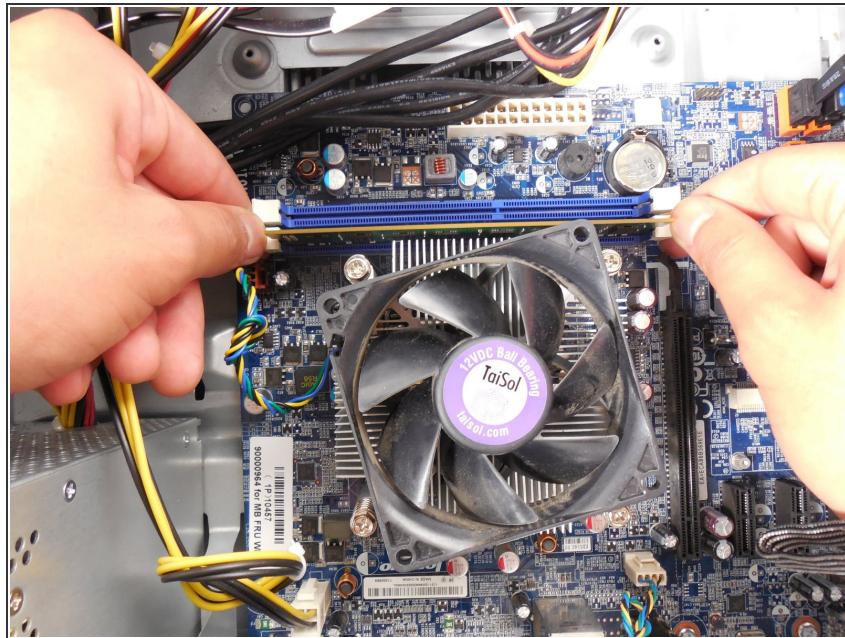

Step 1 — Side Panel

- Lay the computer down on its side as shown.

- Remove the two 14mm screws shown. The screws are loose enough to unscrew with your hands.

Step 2

- Gently slide the side panel straight back and remove from the computer.

Step 3 — RAM Module

- Push down on the white clips on both sides of the memory module to release it.

- Gently pull up on the memory module to remove it from the unit.

To reassemble your device, follow these instructions in reverse order.
