INTRODUCTION

If the laptop begins to freeze up then it is a problem with the fan.

🔧 TOOLS:

- iFixit Opening Tools (1)
- Spudger (1)

Step 1 — Battery

- Flip laptop over so the model sticker is showing, and begin to unscrew all of the screws.

Step 2

- Pop off the back panel using a plastic opening tool once all screws are removed.

This document was generated on 2019-10-26 10:39:35 PM (MST).

Step 3

- Once the panel is fully removed, begin to unscrew the battery.
Step 4

- Use the iFixit Opening tool to disconnect the battery from the circuit board.

- When all screws are removed from the battery, carefully lift the battery up.
Step 5

- The battery is completely removed, and can be replaced with a new battery.

Step 6 — Fan

- Remove all screws securing the fan to the laptop.

Step 7

- Unhook the wire from the fan component using a spudger.

Step 8

- Now the fan is completely removed.

To reassemble your device, follow these instructions in reverse order.
