INTRODUCTION

If you need to replace the hard drive, follow this guide. For this guide you will need Phillips #0 screwdriver, from the iFixit tool kit to remove the back case. You will need a plastic spudger to remove the casing.

🔧 TOOLS:

- Phillips #0 Screwdriver (1)
- iFixit Opening Tools (1)
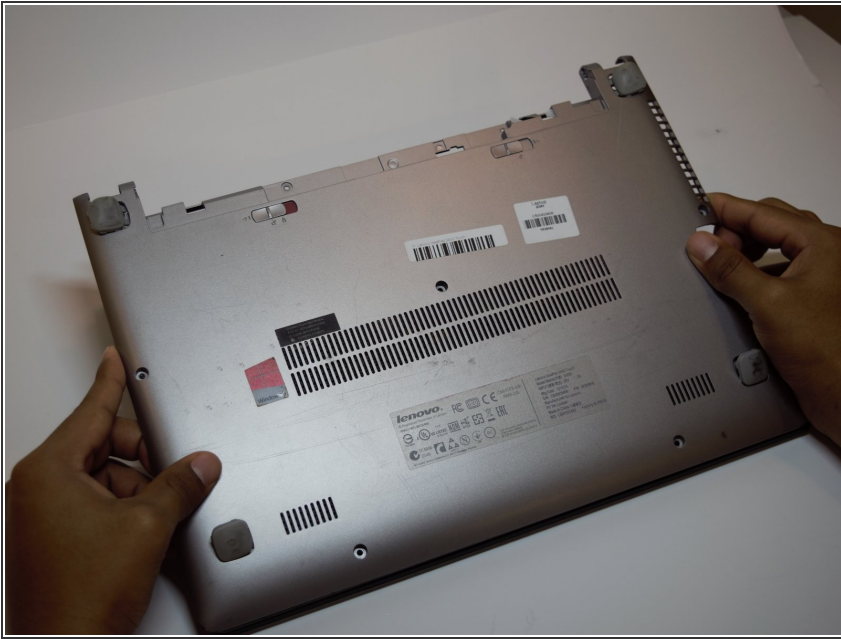

Step 1 — Battery

- Turn your computer over so the back is face up.

- Use your forefinger to unlock the two tabs located on the back. Slide the tabs until you see the red showing.

- The battery cover will then pop up allowing you access to the battery.
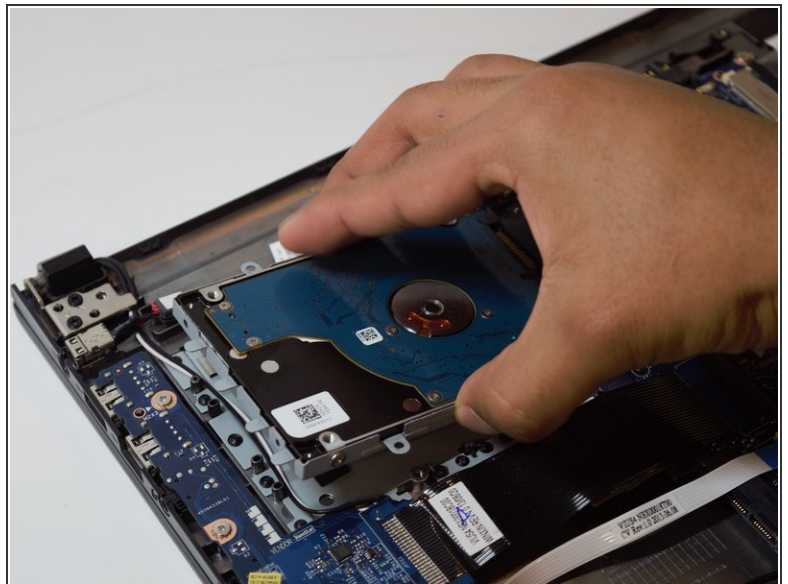

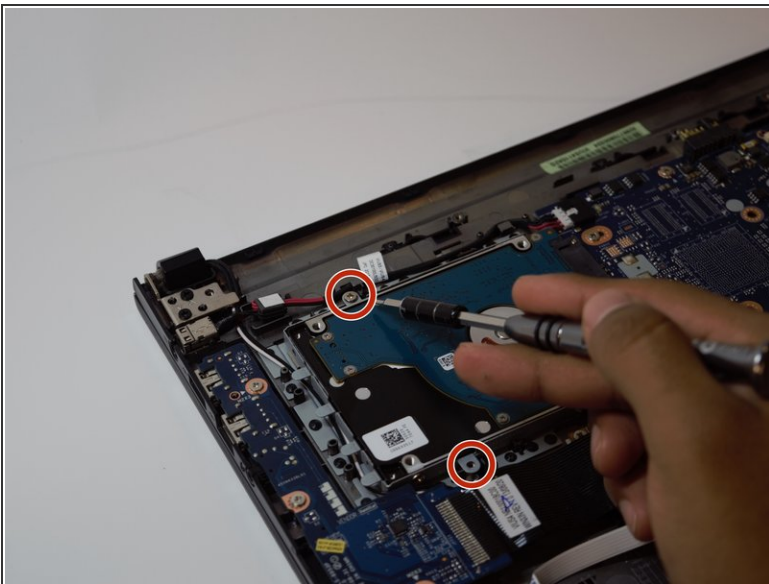

Step 2 — Hard Drive

- Remove the five 6mm Phillips #0 screws from the back panel.

- Pull back the rubber tabs from the corners of the laptop backing to expose the screws.

  - ⓘ The two tabs next to the battery flip toward the battery. The two remaining tabs flip down, away from the battery.

- Remove the four 4mm Phillips #0 screws that are underneath the rubber tabs.

- Remove the three 6mm Phillips #0 screws from under the battery.

Step 3

- Slide the back panel away to remove it.
  - ⓘ Don't be afraid to apply force when removing the back panel.

Step 4

- Remove the two 3mm Phillips #0 screws that hold the hard drive to the case.
- Take out the hard drive by lifting and sliding it at the same time.

To reassemble your device, follow these instructions in reverse order.
