INTRODUCTION

This guide will assist with the replacement of the battery. The user should be familiar with using a screwdriver, and should be able to keep track of all removed screws. Be careful of any sharp edges within the computer itself.
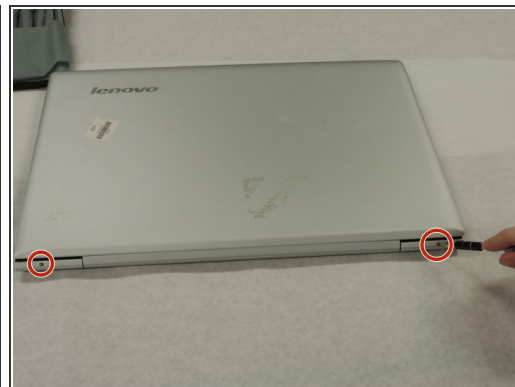

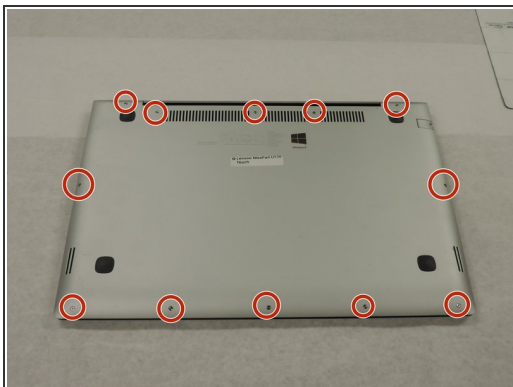

TOOLS:

- Phillips #000 Screwdriver (1)
- iFixit Opening Tools (1)
- JIS #1 (1)

PARTS:

- Replacement Battery (1)

This document was generated on 2019-11-15 02:39:57 PM (MST).
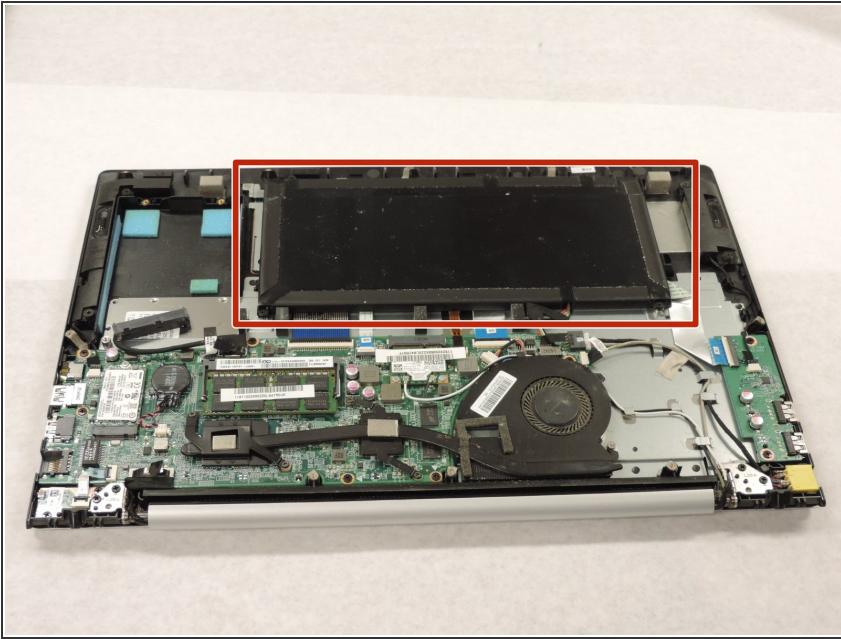

Step 1 — Battery

- Remove the back panel by removing all screws. Use a PH000 screwdriver head.

- Make sure to also remove the hinge screws.

Step 2

- To remove the panel, use a plastic opening tool to prevent any damage.

Step 3

- Locate and assess the battery. Pictured in the upper right area of the computer.
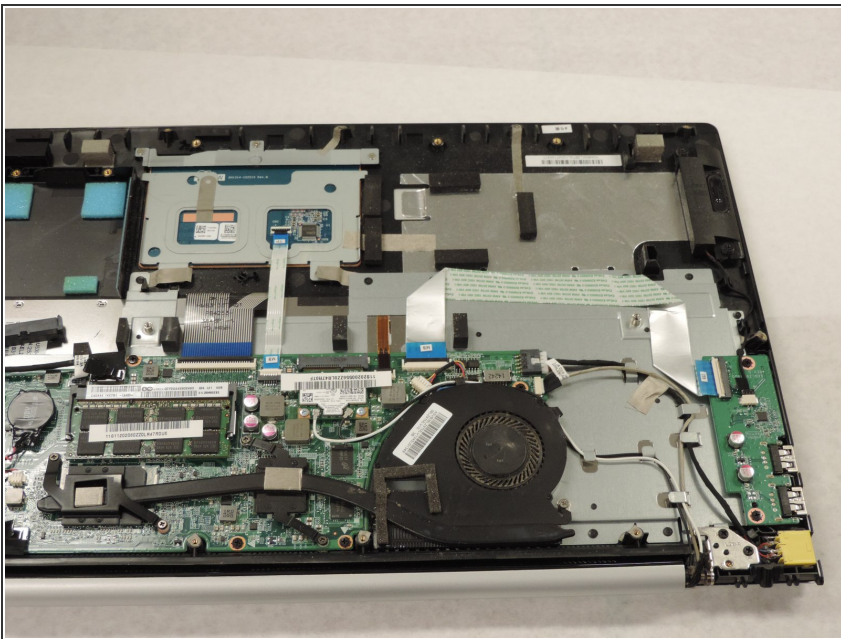

Step 4

- Locate and remove all screws attaching the battery to the hull of the computer. It is recommended that you use a JIS #1 screwdriver head for this task.

- Be careful to keep track of all removed screws.

Step 5

- Detach the connection from the battery to the motherboard. This is the only connection that needs to be disconnected for the battery.

- To remove the connection, please pull firmly, as it well secured.

Step 6

- Simply lift the battery out of the computer, and acquire a replacement.

To reassemble your device, follow these instructions in reverse order.
