

Lenovo IdeaTab S6000 Vibration Motor Replacement

This guide will help you replace the vibration motor of the Lenovo IdeaTab S6000.

Written By: Gabriel Delgado

INTRODUCTION

The following guide details the necessary steps that you have to follow in order to replace the vibration motor for the Lenovo IdeaTab S6000.

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
 - [iFixit Opening Tools](#) (1)
 - [Spudger](#) (1)
-

Step 1 — Battery

- Remove the speaker screens by working them loose with a plastic opening tool. You may need to first loosen them with tweezers or a craft knife.

⚠ These screens are held in place by glue that is hard to remove. Please take your time to ensure that this step is done correctly.

Step 2

- Remove the screws from both of the spots that were covered.

Step 3

⚠ DO NOT USE A METAL TOOL FOR THIS.

- Go all around the casing, prying the screen away from the backing with the spudger.
- It will make a popping sound each time one of the lock tabs is disconnected.
- ⓘ Take your time as you move all around the device when prying the backing off.

Step 4

- Pull off the plastic that is covering the battery cable.

Step 5

- Using either the plastic opening tool or your fingers, gently pull on both sides of the plug to release it.

Step 6

- Remove the battery by grabbing the tab shown and pulling up.
- The battery is held to the device by adhesive. Pull the battery up from the tab and it will lift out with a bit of effort.

Step 7 — Vibration Motor

- Use the spudger to pry up the vibration motor.

To reassemble your device, follow these instructions in reverse order.
