

Lenovo Thinkpad Edge E545 Hard Drive Replacement

This guide will give you a step by step tutorial for replacing the hard drive

Written By: Brian butler

 **TOOLS:**

- **Phillips #0 Screwdriver** (1)
- **Metal Spudger** (1)
- **Phillips #000 Screwdriver** (1)

Step 1 — Battery

- First, flip the laptop over as shown in the photo.

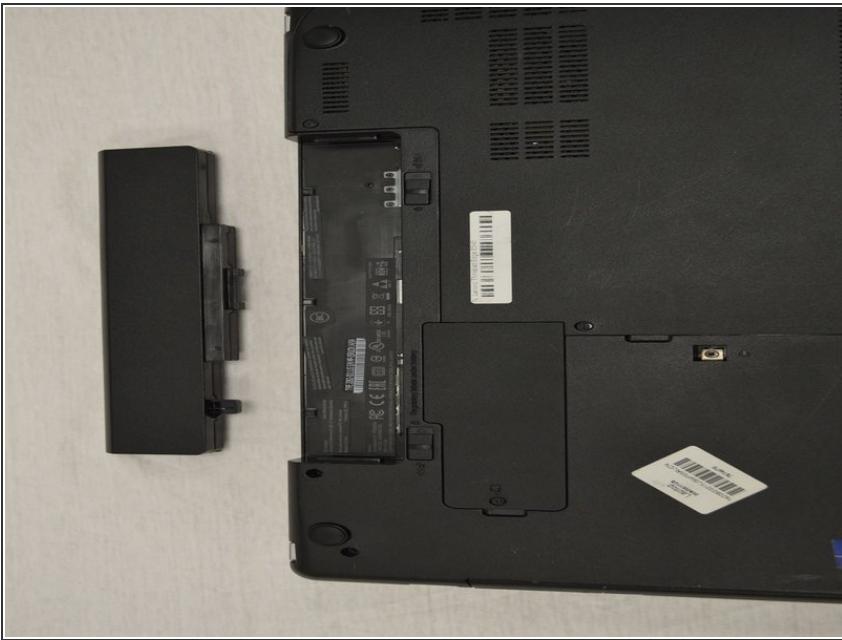

⚠ Make sure device is fully powered down before removing battery.

Step 2

- Below the battery are two small tabs. These function as a lock for the battery.
- Push the tabs towards each other to release the battery.

Step 3

- Remove the battery from the device.

Step 4 — Back Panel

- Using a Phillips screwdriver, remove the four screws around the edges of the rectangular panel.

(i) It is recommended that you fully remove the screws and place them in a secure location.

! Make sure to use the appropriate sized screwdriver. The wrong size can cause damage to the screws or screwdriver.

Step 5

- Once all the screws are removed, gently slide the metal scallop around the edge of the panel to pry it open.
- Slowly lift the left edge side of the panel with your fingers. Once the left side is up, continue lifting the right edge of the panel.

Step 6

- Remove the back panel.
- The back of the laptop will be exposed once the panel is removed.

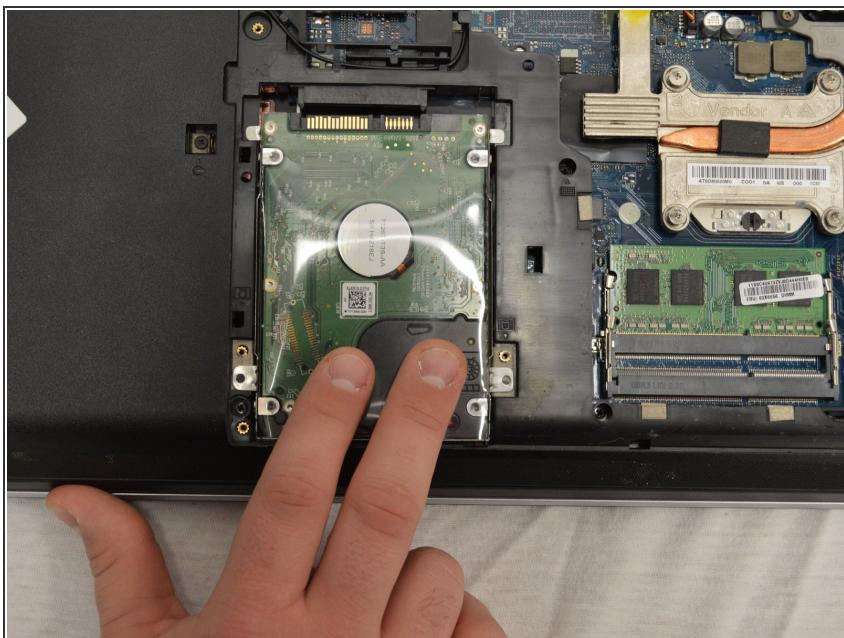

ⓘ Many of these small components are easily damaged--do not touch anything unless instructed to.

Step 7 — Hard Drive

- After back panel is removed, you can remove the two screws at the bottom of the hard drive using the Phillips #000 screwdriver.

Step 8

- After screws are removed, slide the hard drive down to disconnect from motherboard and remove it.

Step 9

- Now you have successfully removed the Hard drive.

To reassemble your device, follow these instructions in reverse order.
