## Step 1 — Back Cover

 Ensure your device is completely OFF before starting this guide.

- Use a Torx T4 screwdriver to unscrew the nine 5 mm screws holding the cover in place.

- Use a Torx T4 screwdriver to unscrew the 8 mm screw in the center.

 When reassembling, make sure not to tighten the screws too much or you may risk cracking the plastic cover.

## Step 2

- Use the plastic opening tool to pry the cover up and away from the laptop, starting at one end and working your way around the cover.

 The cover is large and flat and made of thin plastic. It cracks easily, so make sure not to pry too hard.

## Step 3 — Battery

- Use a Phillips #00 screwdriver to remove the four 3 mm screws holding the battery in place.
- ⓘ Be careful not to cross-thread the screws. Also, don't let the screws fall down into the laptop case.

## Step 4

- Lift the battery connector straight up away from the board using your fingers or an opening tool.

## Step 5

- Remove the battery.

## Step 6 — SSD

- Use a Phillips #00 screwdriver to remove the 3mm screw on the SSD.

## Step 7

- Use your fingers to lift up the SSD and pull away from the socket removing it from the laptop.

## Step 8 — Motherboard

- Use a PH00 screwdriver to remove the nine 3mm screws.

## Step 9

- Disconnect the indicated cables from the motherboard.
- ⚠ Be careful when removing cables. Do not pull or yank cables from their slots.
- Remove the motherboard.
- ⓘ If you want to fully remove the motherboard, you must desolder the display cable.

To reassemble your device, follow these instructions in reverse order.
