INTRODUCTION

There are a few reasons why you might want to replace the battery in your Lenovo Yoga 910-13IKB. Over time, batteries degrade and their ability to hold a charge diminishes, resulting in low battery life that might not be enough to get you through the day. In rare cases, it is possible for the battery to expand and push against the chassis and other components of the laptop. For users who wish to replace the battery on their device, Lenovo has made it easy to do so, only requiring a JIS #00 screwdriver.
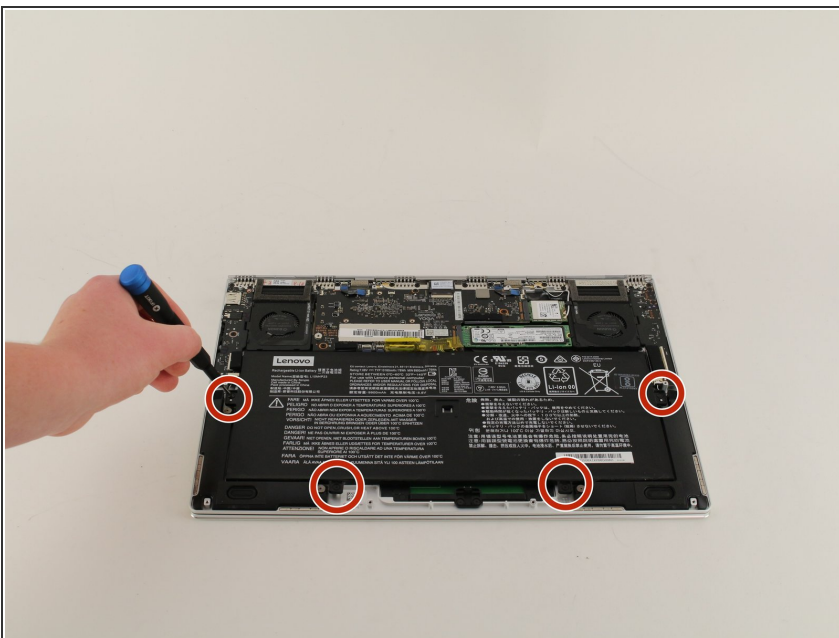

TOOLS:

- JIS #00 Screwdriver (1)

Step 1 — Battery

⚠️ Completely power off the laptop and disconnect it from any power sources before beginning.

● Turn the laptop over and remove the ten 3mm JIS #00 screws along the perimeter of the bottom panel.

● Remove the panel.

Step 2

● Remove the four 3mm JIS #00 screws holding the battery in place.

Step 3

- Disconnect the bundled cable connector that allows the battery to power the device.

- ⚠️ Pull evenly on the width of the cable so that no individual wire is overly strained.

- Lift the battery out.

To reassemble your device, follow these instructions in reverse order.
