Step 1 — Back Cover

- Remove the two Phillips #000 screws.

- *i* These screws are located behind the stand for the device.

- *i* Our device did not include these screws.

Step 2

- Use a plastic iFixit opening tool to pry the edges of the back case loose by placing it in between the edge of the cover and the screen.

- ⚠ Do not immediately attempt to remove the back of the case without attempting Step three, or you risk snapping the back cover.

Step 3

- Use the spudger to reach into the center of the device and pry off the back case by giving it a light force upwards.
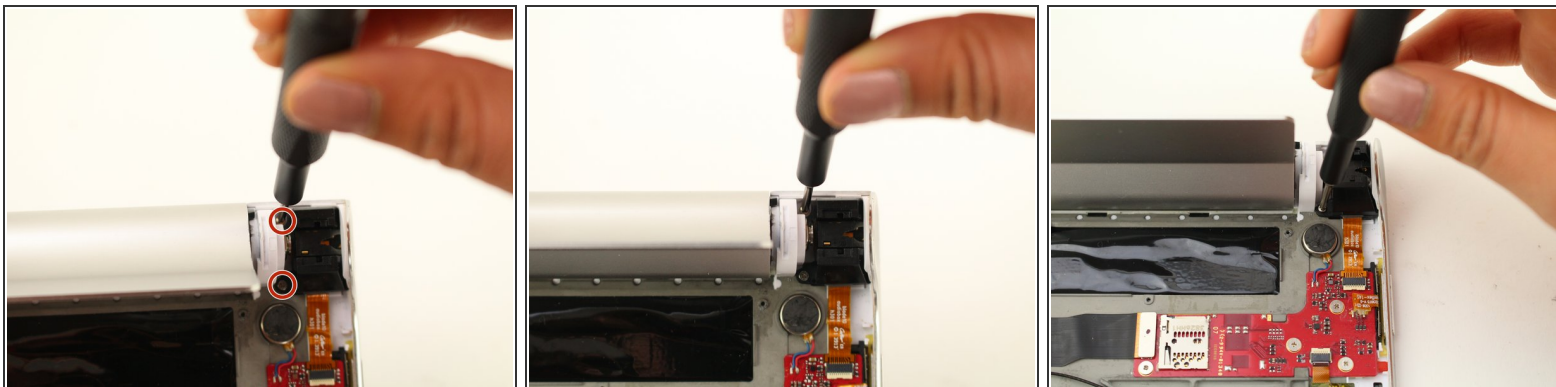

Step 4 — Headphone Jack

- Remove the headphone jack cover with tweezers by grabbing it and pulling directly up and away from the device.
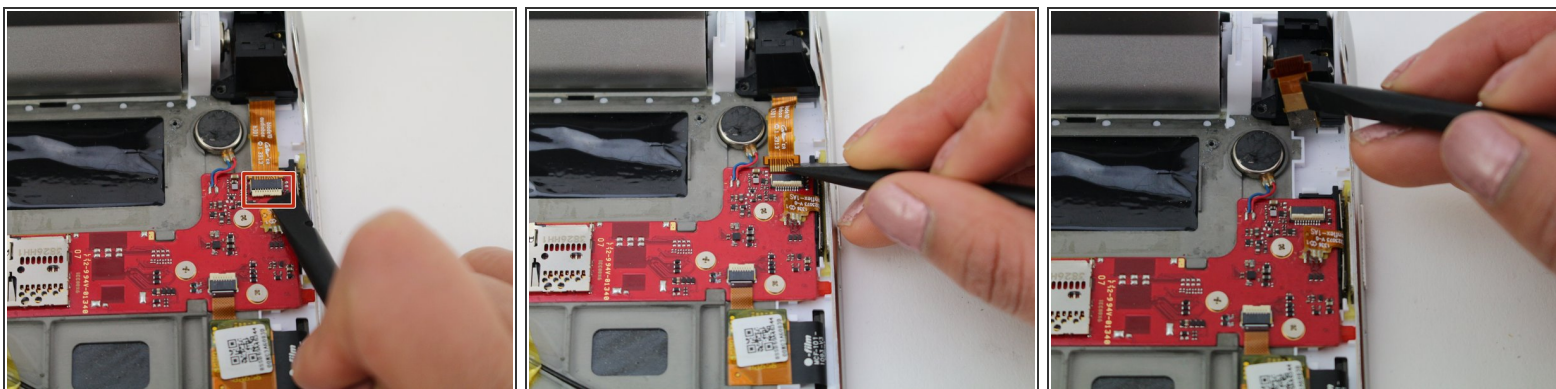

Step 5

- Remove the two 3.5mm screws using the Phillips #00 Screwdriver.

Step 6

- Disconnect the headphone jack from the motherboard by placing the spudger in between the connections and motherboard and pushing up towards you.

- Pull the wire towards the headphone jack to disconnect it.

Step 7

- Use tweezers to remove the headphone jack by pulling it up and towards you.

To reassemble your device, follow these instructions in reverse order.
