INTRODUCTION

The Lifeprint 3 x 4.5 uses a rechargeable Lithium ion battery. In the case that the Lifeprint won't charge, replacing the rechargeable battery is a potential solution to allow your Lifeprint to turn on.
🔧 TOOLS:

- iFixit Opening Tools (1)
- Phillips #0 Screwdriver (1)

Step 1 — Top Cover

- Place one hand on the top cover and one hand on the bottom portion of the LifePrint.

- While having the LP logo on the printer facing away from you, push the top cover away from you until it can't be slid away any further.

- Pull the cover with the LP logo up to separate it from the rest of the printer.
Step 2 — Inner Cover

- Using a Phillips #0 screwdriver, remove the four 15 mm screws connecting both sections of the device.

- Use an opening tool to remove the inner cover from the printer.

Step 3 — Battery

- Remove three 4mm Phillips #0 screws connecting the metal shield covering the battery.

- Slide out the white power connector with two red wires, two black wires, and one yellow wire from the terminal connected to the circuit board.

- Apply pressure gently and slowly from underneath the battery from the plastic.

Step 4

- Remove the battery from the printer.

To reassemble your device, follow these instructions in reverse order.
