

Logitech G502 Proteus Core Scroll Wheel Replacement

The default scroll wheel is made of metal and may be a bit noisy for some. Follow this guide if you wish to remove your wheel or replace it.

 **TOOLS:**

- [Spudger \(1\)](#)
- [Phillips #00 Screwdriver \(1\)](#)

 **PARTS:**

- [Scroll Wheel \(1\)](#)

Step 1 — Scroll Wheel

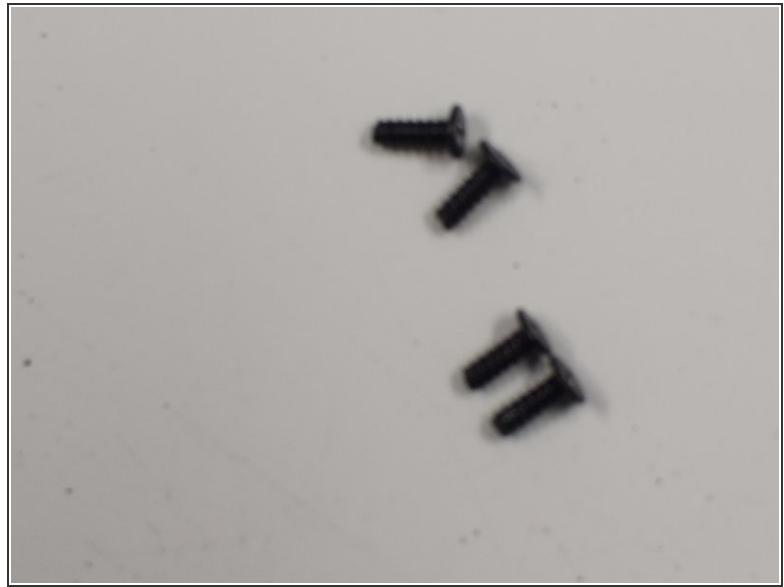

- Flip the mouse over to access the feet.

Step 2

- Use your fingers or a nylon spudger to remove the specified mouse feet in order to reveal the screws.

Step 3

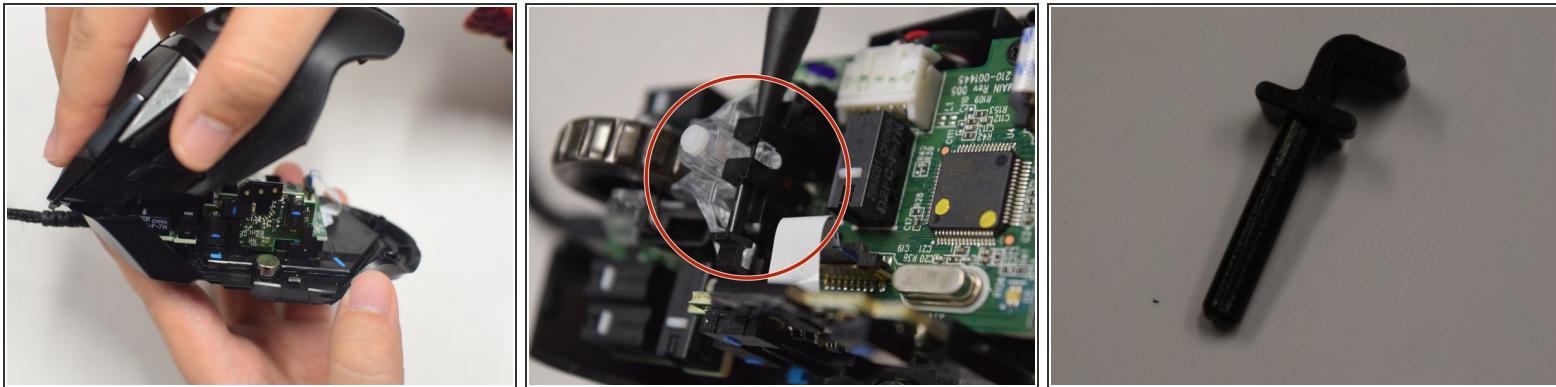

- Use a #00 Philips screw bit to remove the indicated 12.5mm screws.

Step 4

- Use a nylon spudger to pry the top shell from the bottom of the mouse.

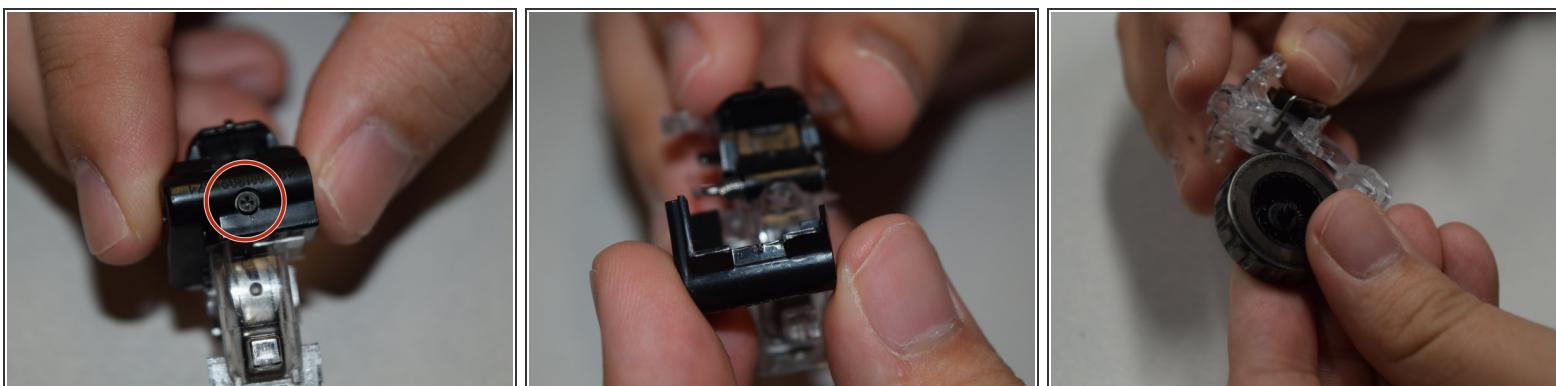

Step 5

- Use a nylon spudger to push the fastener pin free.

- *(i)* Be careful not to lose two springs near the front of the mouse underneath the wheel housing. Place them aside safely.

Step 6

- Once the pin is removed, use a #00 Phillips screw bit to remove the 7.5mm screw from the scroll wheel holder.
- Once the plastic scroll wheel holder is off, the scroll wheel is free and can be lifted out.

To reassemble your device, follow these instructions in reverse order.
