

MacBook Pro 13" Retina Display Late 2012 AirPort Board Replacement

Replace the AirPort Board in your MacBook Pro 13" Retina Display Late 2012.

Written By: Walter Galan

INTRODUCTION

Use this guide to replace the AirPort board.

TOOLS:

- [MacBook Pro and Air 5-Point Pentalobe Screwdriver \(1\)](#)
- [iFixit Opening Tools \(1\)](#)
- [Spudger \(1\)](#)
- [T5 Torx Screwdriver \(1\)](#)
- [T6 Torx Screwdriver \(1\)](#)
- [Tweezers \(1\)](#)

PARTS:

- [MacBook Pro 13" and 15" \(Late 2012/Early 2013\) Retina Airport/Bluetooth Board \(1\)](#)

Step 1 — Lower Case

- Remove the following ten screws securing the lower case to the upper case:
 - Two 2.3 mm P5 Pentalobe screws
 - Eight 3.0 mm P5 Pentalobe screws

 Throughout this repair, [keep track of each screw](#) and make sure it goes back exactly where it came from to avoid damaging your device.

Step 2

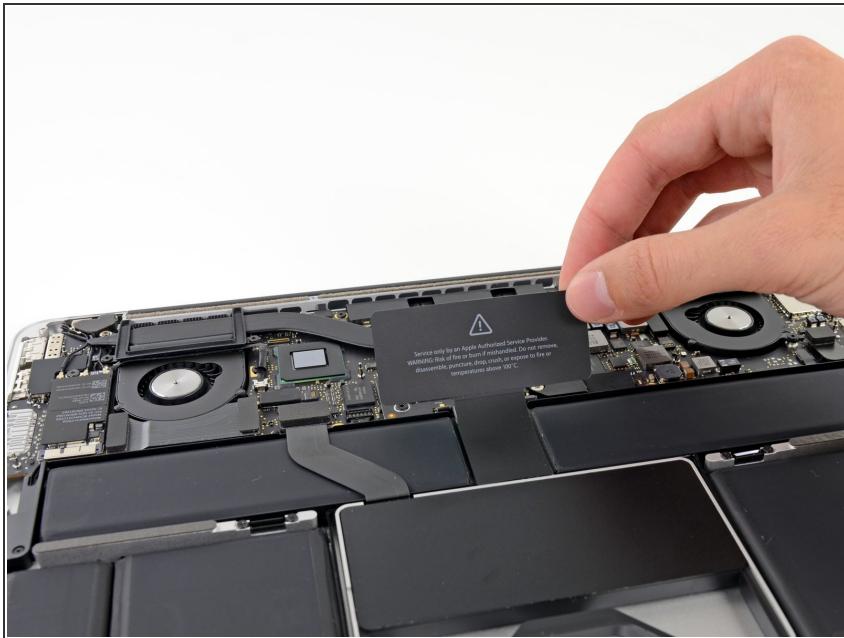

- Wedge your fingers between the upper case and the lower case.
- Gently pull the lower case away from the upper case.
- Remove the lower case and set it aside.

Step 3

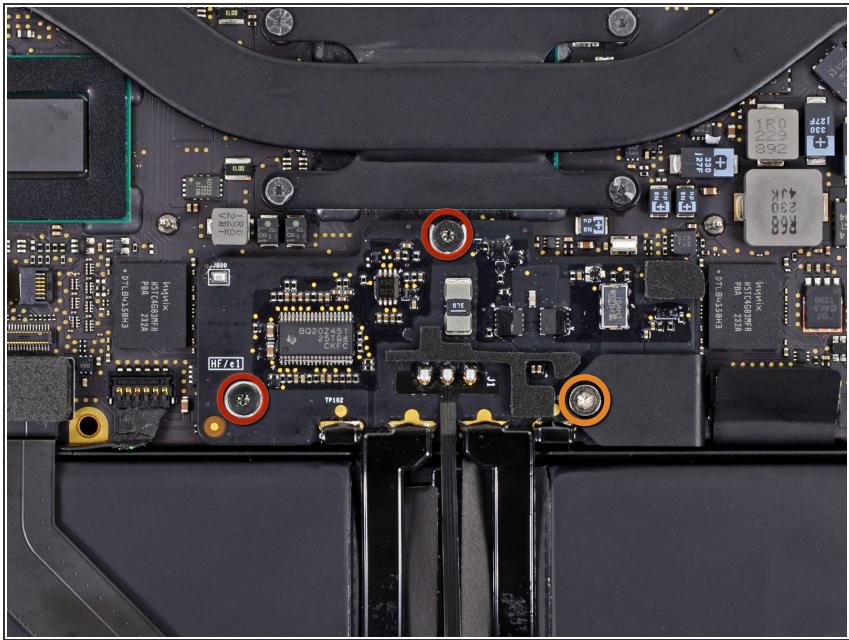

- ⓘ The lower case is connected to the upper case at the center, with two plastic clips.
- ⚡ During reassembly, gently push down the center of the lower case to reattach the two plastic clips.

Step 4 — Battery Connector

- Remove the plastic cover adhered to the battery contact board.

Step 5

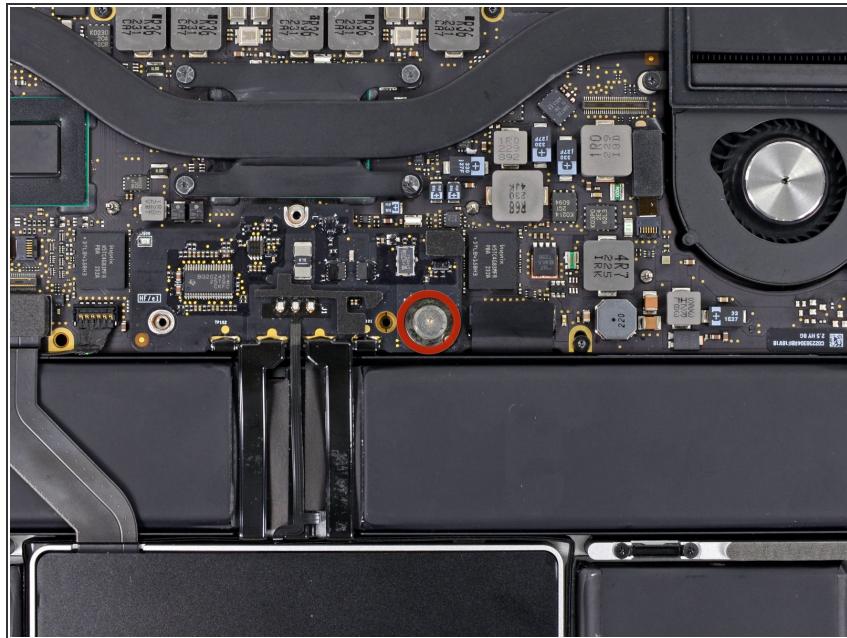

- Remove the following screws securing the battery connector board to the logic board:
 - Two 2.8 mm T6 Torx screws
 - One 7.0 mm T6 Torx shouldered screw

Step 6

- Use tweezers to remove the small plastic cover located near the bottom right of the battery connector board.

Step 7

- Remove the wide head 6.4 mm T6 Torx screw securing the battery connector to the logic board assembly.

Step 8

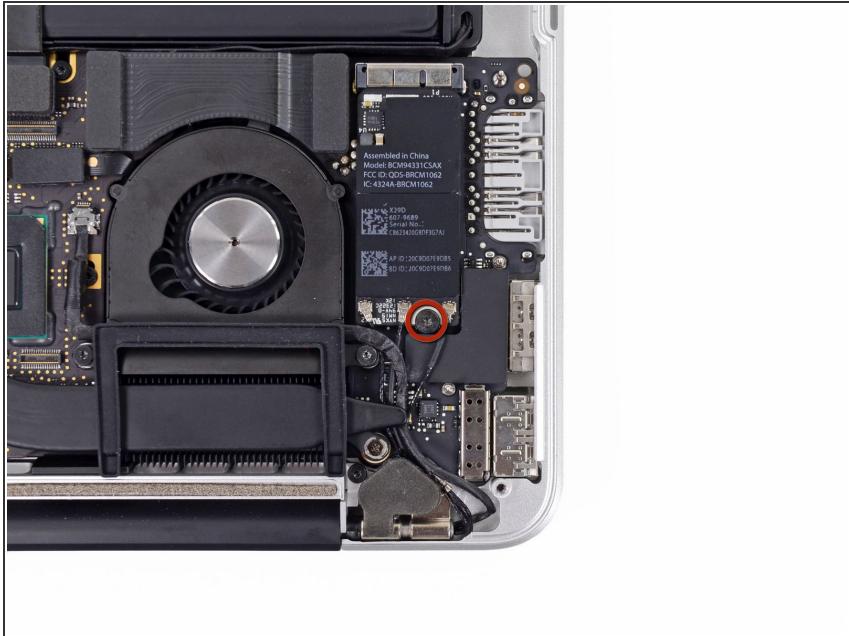

- Carefully lift the battery connector board up off the logic board.
- It is recommended to bend the battery cables just slightly, to keep the board suspended up above the logic board and out of the way.

⚠ Do not fold the board completely over, or crease the cables, as this may damage the battery.

This document was generated on 2019-09-19 02:32:59 PM (MST).

Step 9 — AirPort Board Assembly

- Remove the single 2.7 mm T5 Torx screw securing the AirPort board to the I/O board.

Step 10

- Use the flat end of a spudger to pry and disconnect the three antenna cable connectors from the AirPort board.

 The three cables are coded with black sleeves of different lengths. During reassembly:

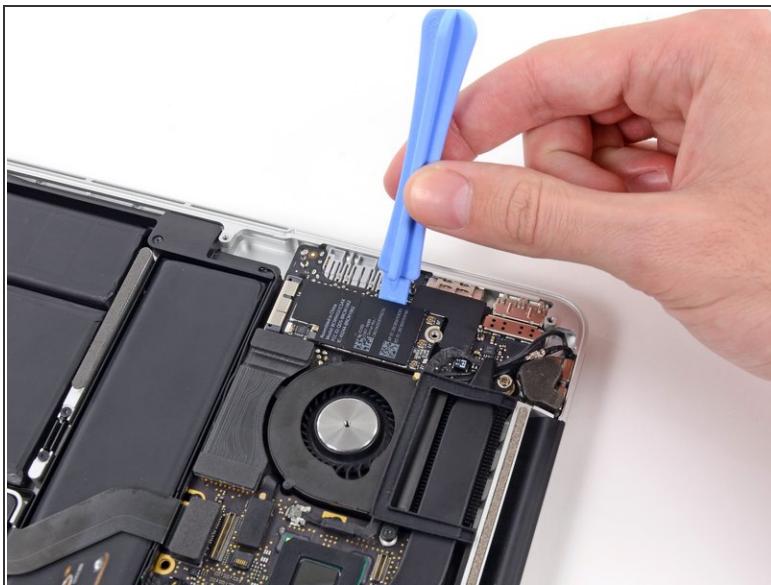

- Connect the long-sleeved cable to the center socket.
- The short-sleeved cable connects next to the screw.
- The remaining cable has no sleeve, and connects in the last empty socket, next to the fan.

Step 11

- Move the antenna cables aside, clear of the AirPort board.

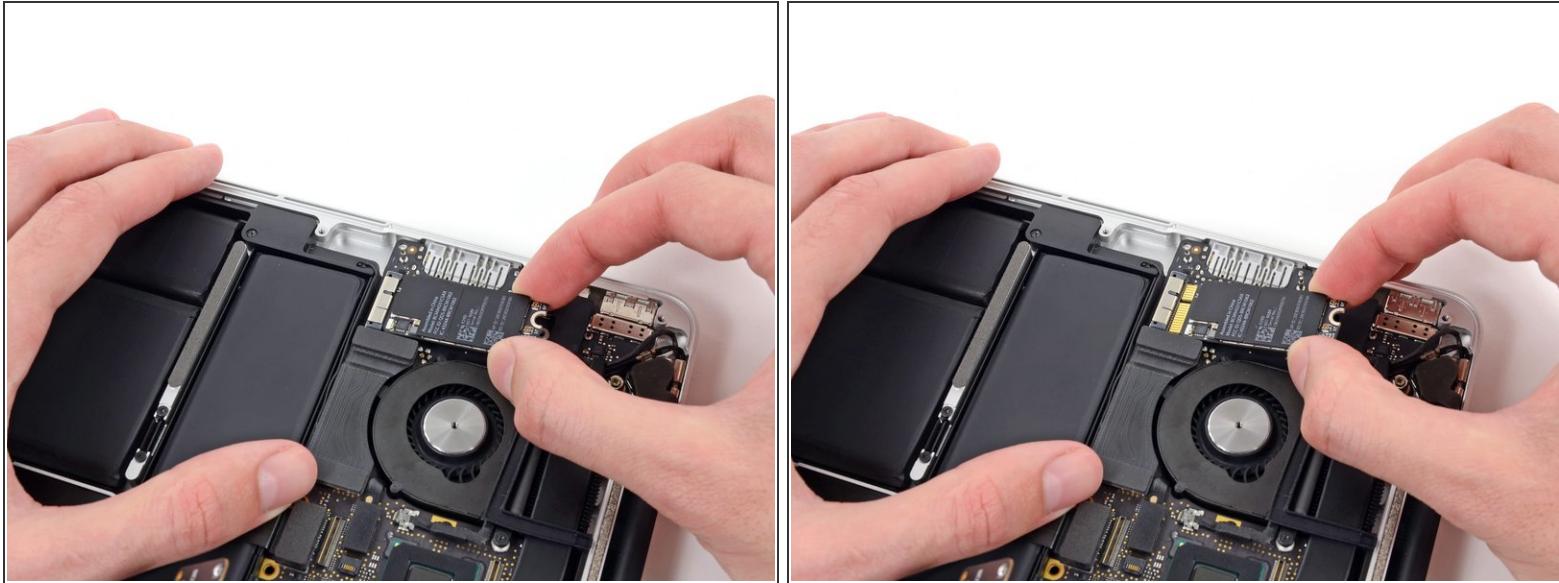

Step 12

- Wedge a plastic opening tool between the AirPort board (side nearest the I/O ports) and the I/O board.
- Gently pry the AirPort board upwards, but do **not** remove it.

⚠ Only lift the AirPort board as much as is necessary to get a grip on it. Lifting it too high above the I/O board may damage the board or the socket.

Step 13

- Pull the AirPort board straight out of its socket on the I/O board.

Step 14 — AirPort Board

- AirPort board remains.

To reassemble your device, follow these instructions in reverse order.
