

MacBook Pro 13" Retina Display Late 2013 Logic Board Assembly Replacement

Prereq to remove the logic board

Written By: Sam Goldheart

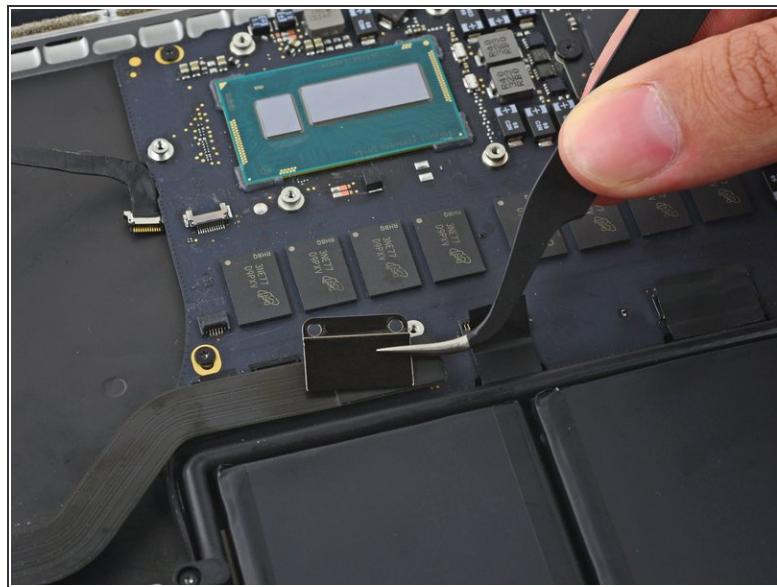

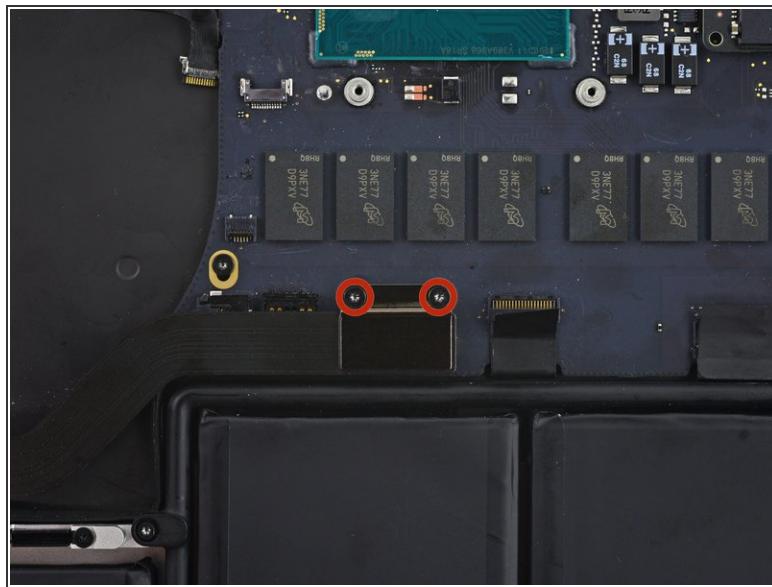

INTRODUCTION

Prereq to remove the logic board

TOOLS:

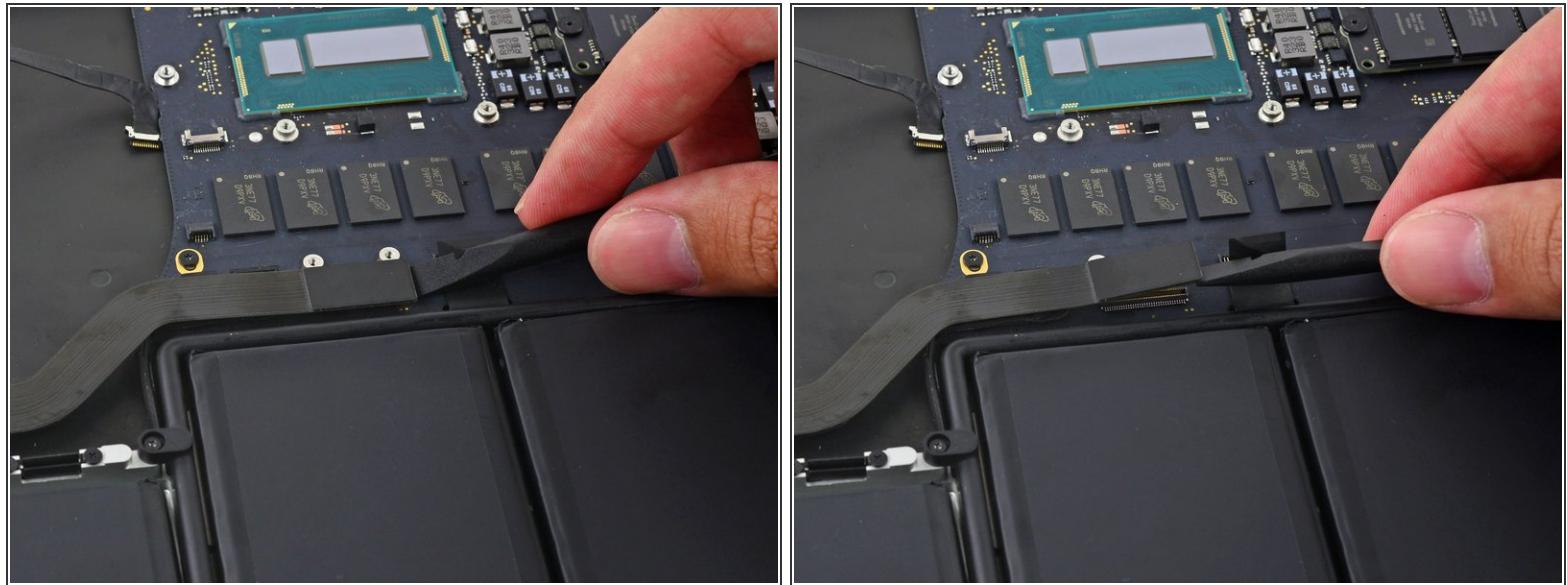

- [T5 Torx Screwdriver](#) (1)
- [Spudger](#) (1)
- [Tweezers](#) (1)

Step 1 — Logic Board Assembly

- Remove the two 2.1 mm T5 Torx screws securing the I/O board cable bracket to the logic board.
- Remove the I/O board cable bracket.

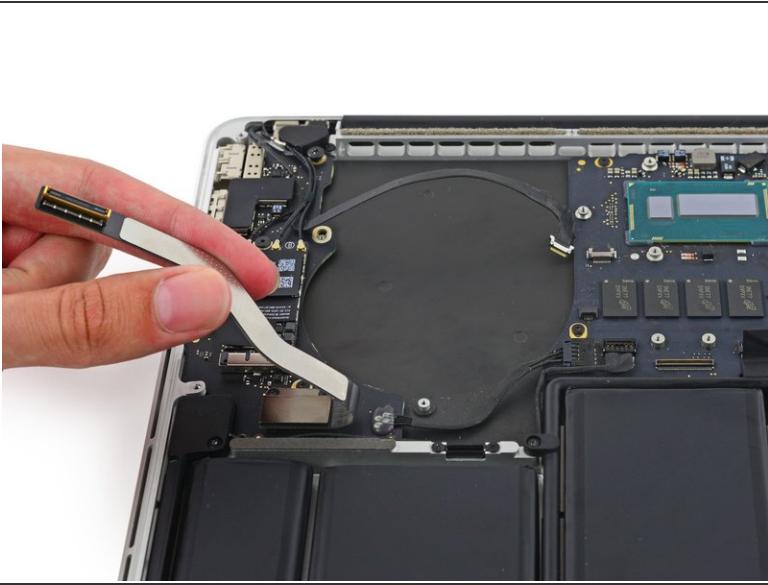

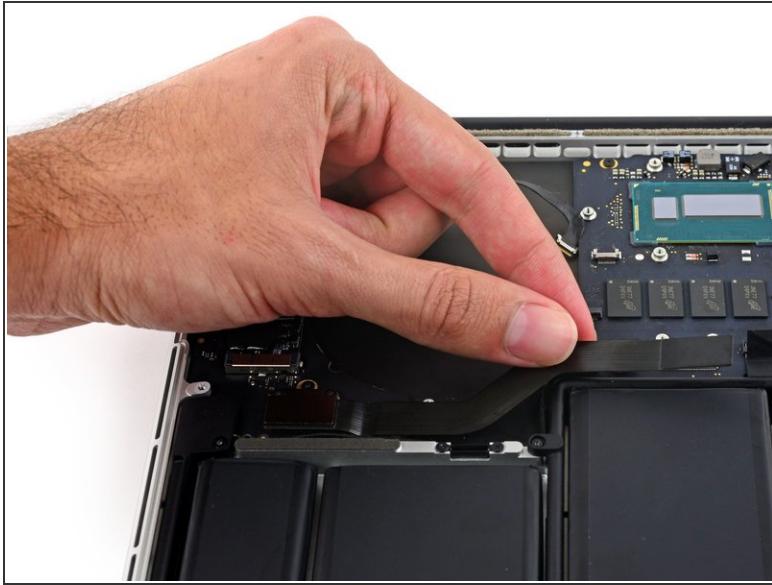

Step 2

- Use the flat end of a spudger to pop the I/O board connector straight up off its socket on the logic board.

⚠ Be careful to only pry up on the I/O board cable, **not** on the socket itself or you risk damaging your logic board.

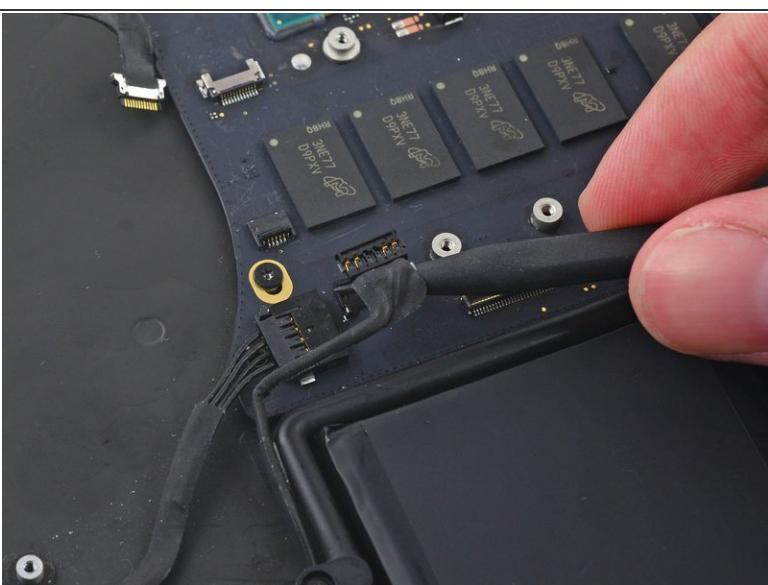

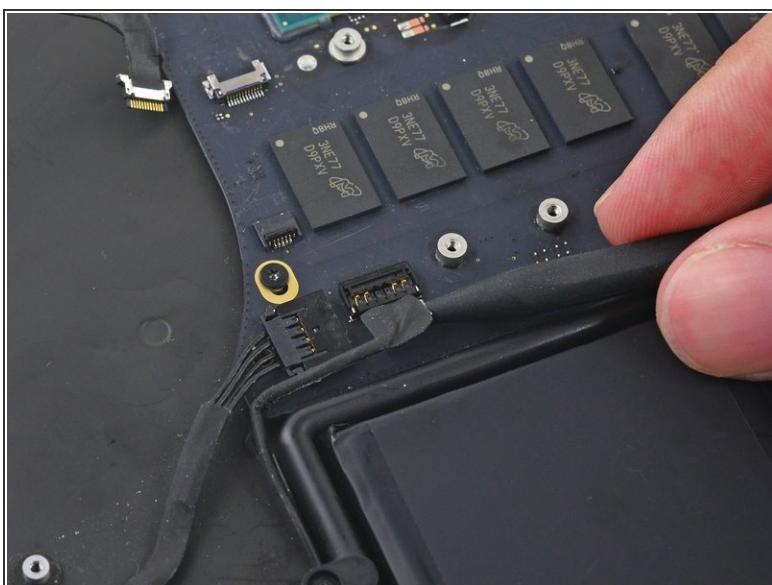

Step 3

- Lift the logic board end of the I/O board cable straight up to bend it out of the way.

 To avoid damage to the cable, fold only at the bend in the I/O board end of the cable.

Step 4

- Use the tip of a spudger to lift the right speaker connector straight up out of its socket on the logic board.

Step 5

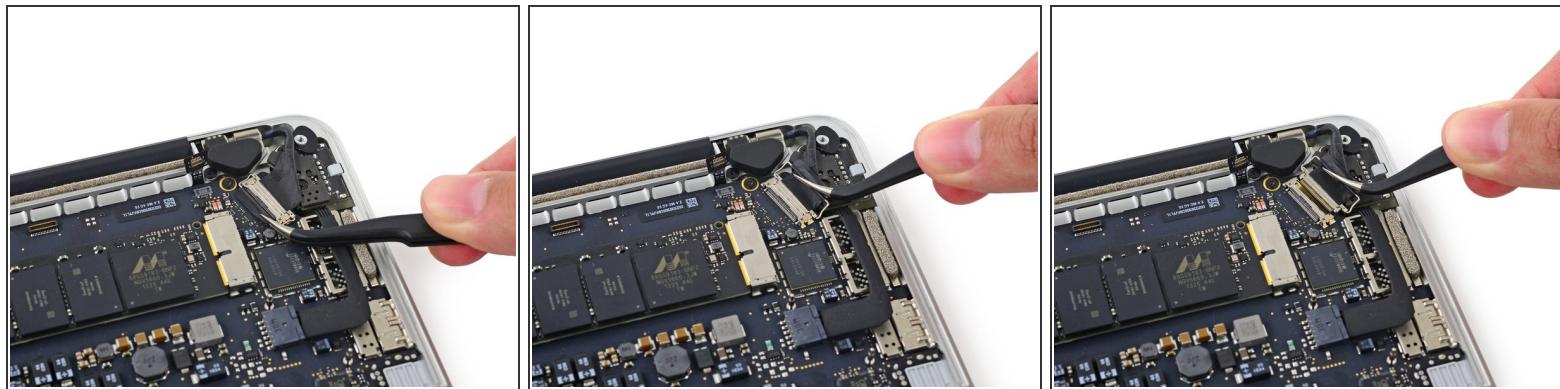

- With the tip of a spudger, push on either side of the I/O board connector to *walk* it out of its socket on the logic board.

Step 6

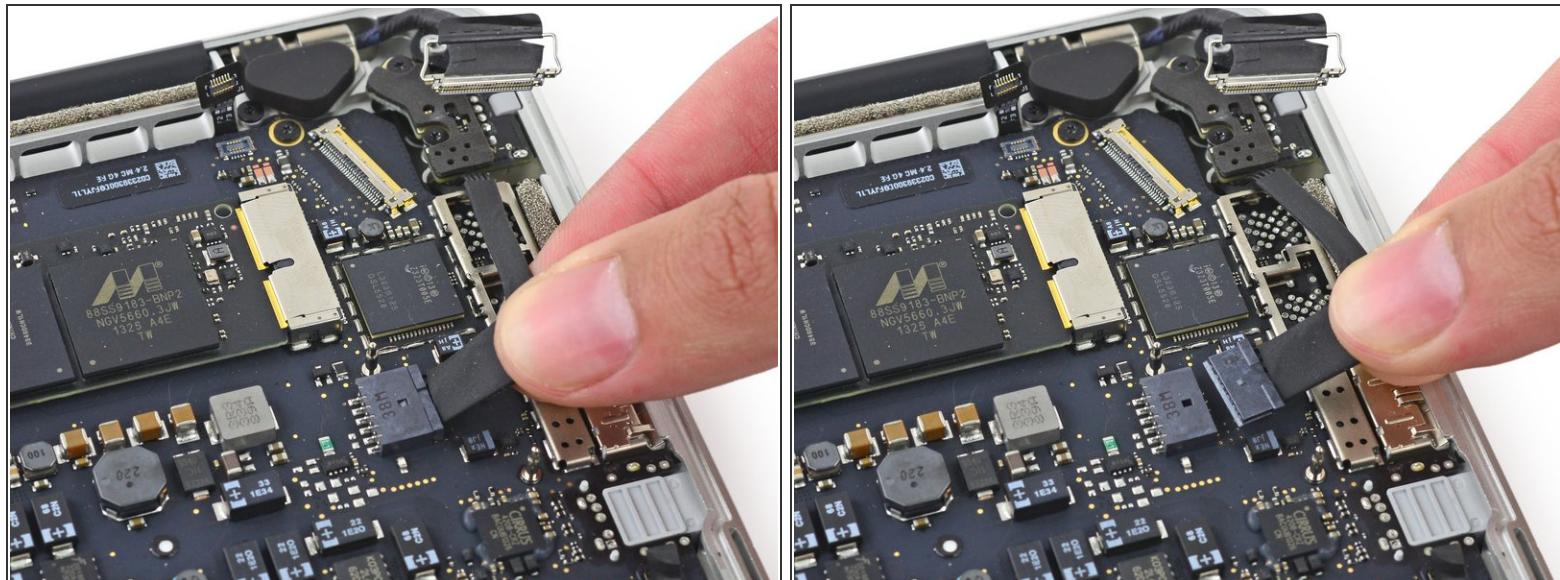

- Use the flat end of a spudger to disconnect the keyboard backlight cable and bend it up out of the way of the logic board.

Step 7

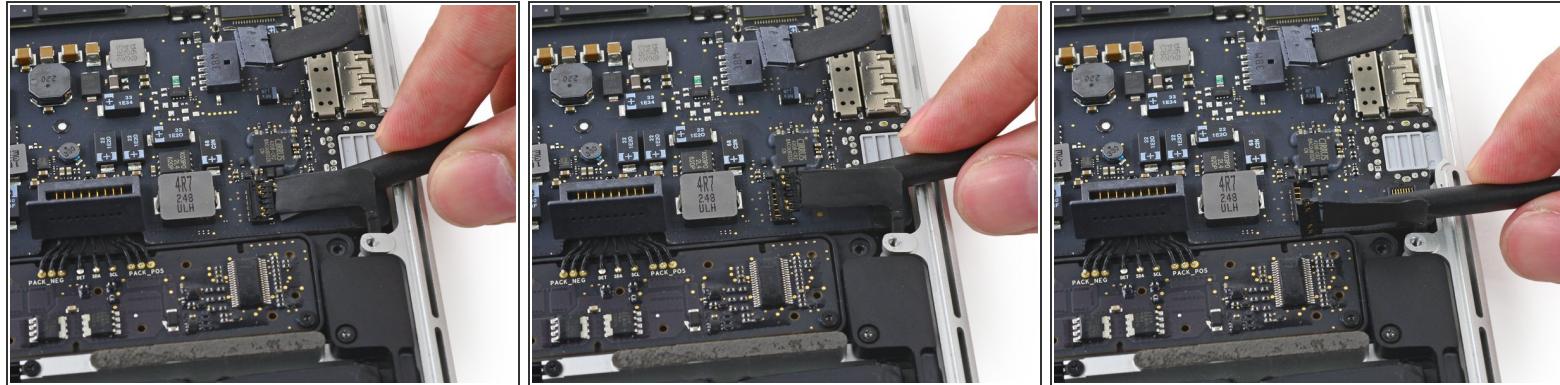

- Grab the black plastic tab to flip the display cable connector open and pull it straight out of its socket on the logic board.

Step 8

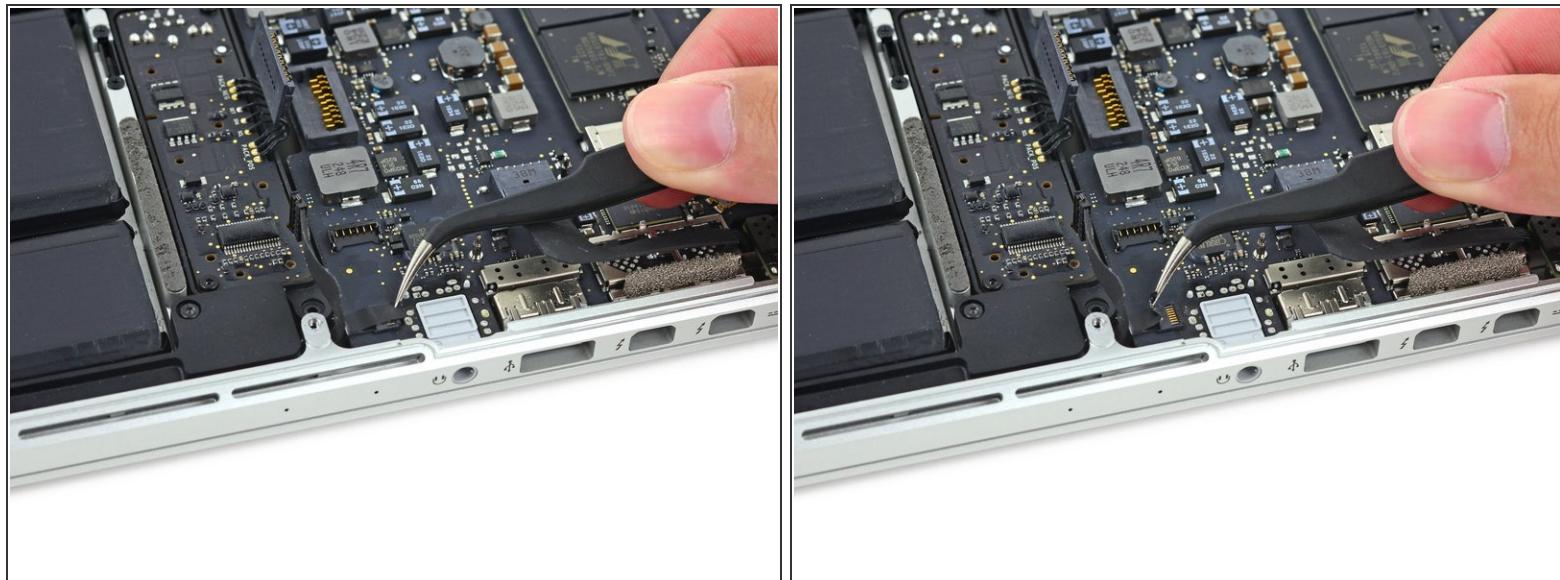

- Carefully pull the DC-In board connector straight out of its socket on the logic board.

Step 9

- Wedge the flat end of a spudger under the left speaker cable near the connector and lift it straight up out of its socket and fold it out of the way.

Step 10

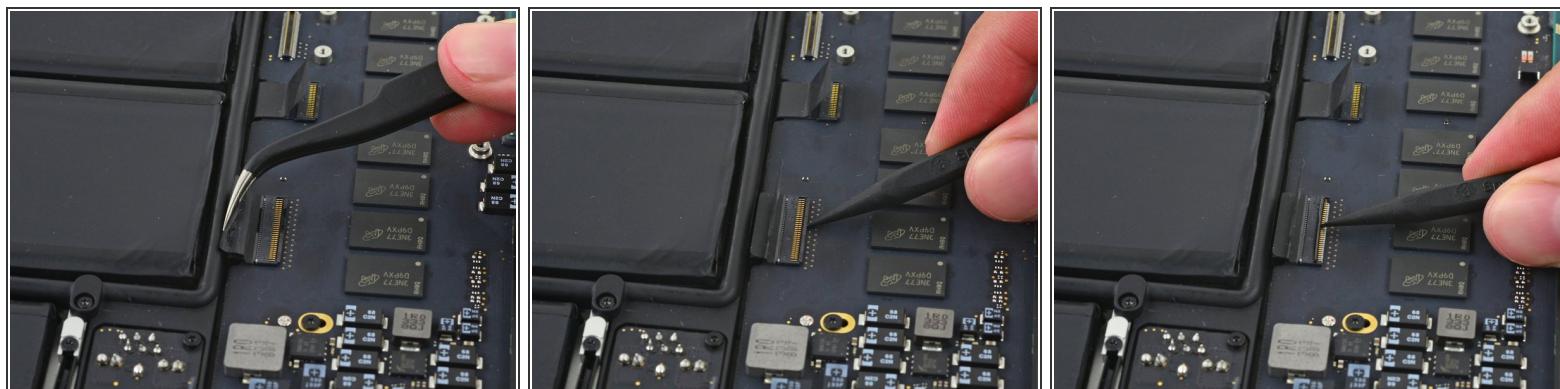

- If necessary, peel back any tape covering the microphone cable ZIF connector.

Step 11

- Use the tip of a spudger to flip the retaining tab on the microphone cable ZIF connector.
- Pull the microphone cable out of its socket on the logic board.

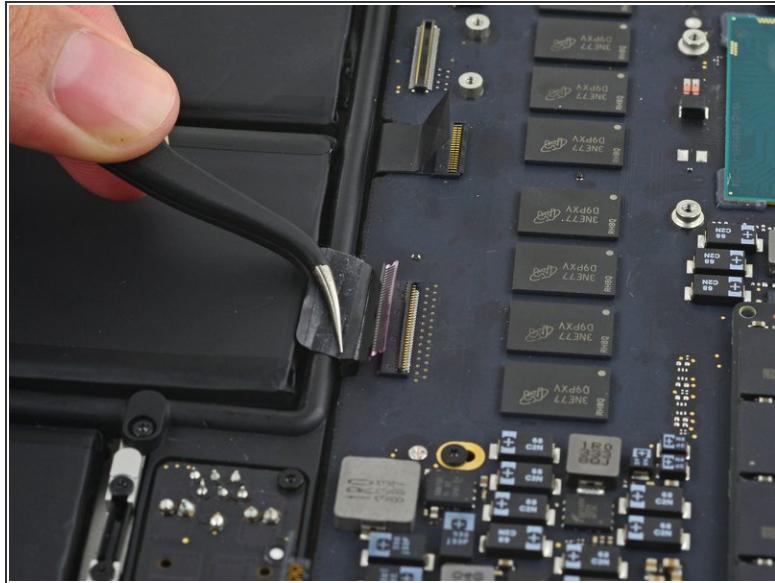

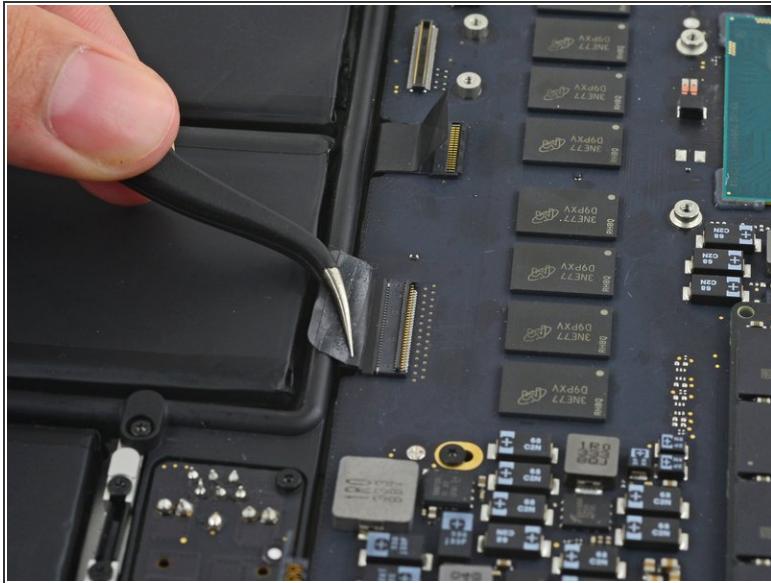

Step 12

(i) If necessary, peel back any tape covering the keyboard cable connector.

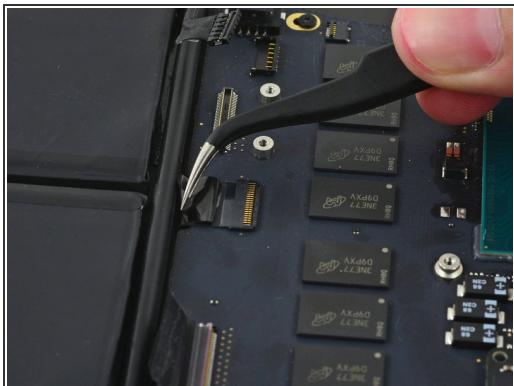

- Use the tip of a spudger to flip the retaining tab on the ZIF connector.

Step 13

- Pull the keyboard cable straight out of its ZIF socket on the logic board.

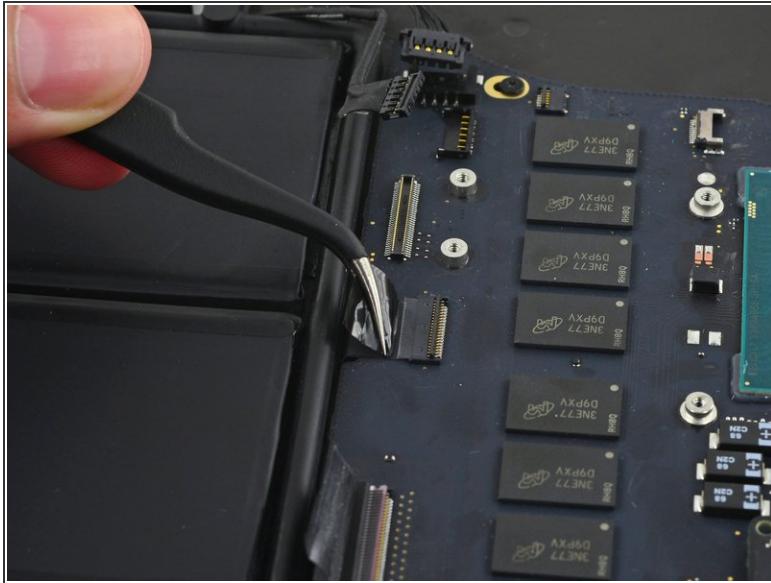

Step 14

(i) If necessary, peel back any tape covering the trackpad cable connector.

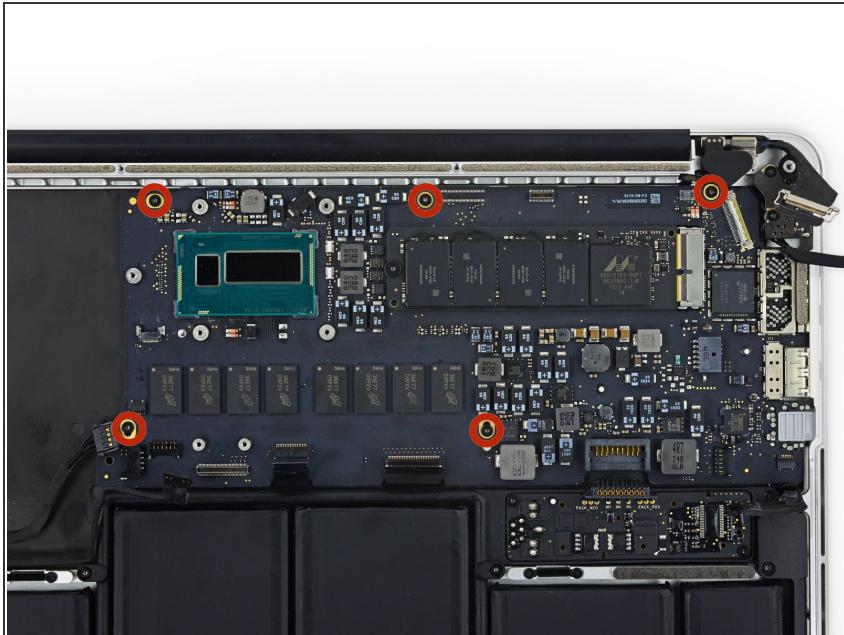

- Use the tip of a spudger to flip the retaining tab on the ZIF connector.

Step 15

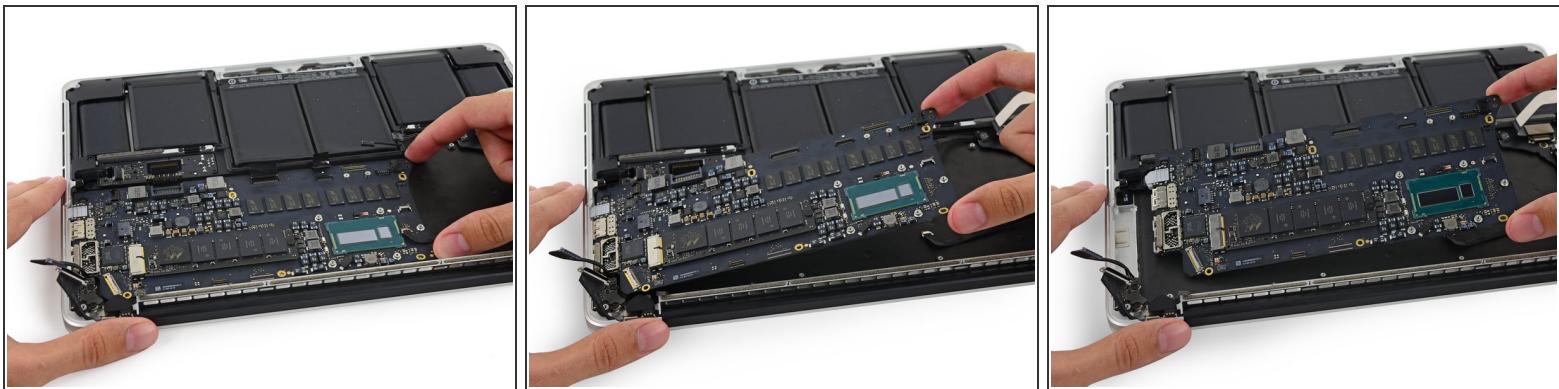

- Pull the trackpad ribbon cable straight out of its socket on the logic board.

Step 16

- Remove the five 3.5 mm T5 Torx screws securing the logic board to the upper case.
- ➡ When reassembling, install all five screws loosely, position the logic board, and then tighten evenly.

Step 17

- Lift the processor end of the logic board up slightly and pull it toward the fan recess to free the ports from the edge of the upper case.
- Remove the logic board.

★ When reinstalling, make sure the keyboard, keyboard backlight, MagSafe, and microphone cables don't get trapped beneath the logic board.

★ Also be sure to slide the ports' metal EMI fingers under the side of the case, not over.

To reassemble your device, follow these instructions in reverse order.
