Macintosh PowerBook 165c Display Replacement

This guide will demonstrate how to replace the Macintosh PowerBook 165c display.

Written By: Jason

# INTRODUCTION

Use this guide to replace the display.

🔧 TOOLS:

- iFixit Opening Tools (1)
- T8 Torx Screwdriver (1)

Step 1 — Display

- Orientate the computer right side up and open the display case to reveal the display.

- Use a plastic opening tool to remove the two small plastic plugs located on the display case just below the display.
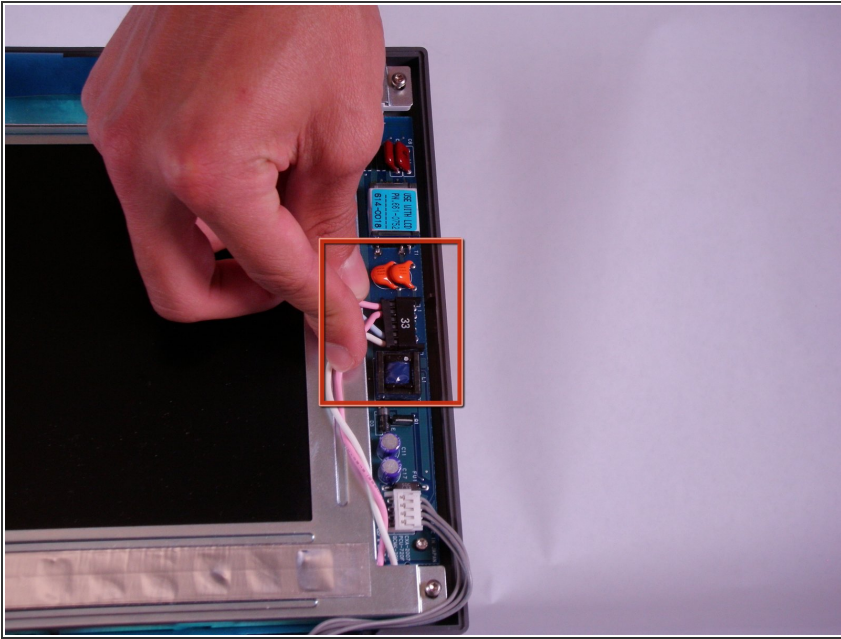

Step 2

- Use a T8 torx screwdriver to remove the two, 7.7mm long screws that were revealed by removing the plastic plugs.

- Twist counterclockwise to remove the screw.

⚠ Caution: Once the screws are removed, the display is only held by two screws. Handle delicately.

Step 3

- Grip the two bottom corners of the plastic display cover and gently pull towards yourself so that the display cover rotates about the top of the display case.

- The display cover should release from top.

- Remove the display case.

Step 4

- Locate the black connector on the right of the display. The connector can be identified by the pink, light blue, and white wires protruding from its side.

- Remove the black connector from the circuit board by pulling it away from its adapter.

Step 5

- Using a T8 torx screwdriver, remove the four, 10.8mm long screws from the corners of the display.

⚠ Caution: The display is no longer supported and must be handled with care.

Step 6

- Carefully tilt the display downwards and rest it on the keyboard.

Step 7

- Locate the orange ribbon cable on the back of the display.

- Open the white tab fastener by pulling it outward.

- Remove the orange ribbon cable by gently pulling it away from the opened tab fastener.

- ⓘ The display is now free.

To reassemble your device, follow these instructions in reverse order.
