

Microsoft Surface Pro 2 SSD Replacement

Written By: Ronnie

 **TOOLS:**

- [T5 Torx Screwdriver \(1\)](#)
- [T4 Torx Screwdriver \(1\)](#)
- [T3 Torx Screwdriver \(1\)](#)
- [iOpener \(1\)](#)
- [iFixit Opening Picks set of 6 \(4\)](#)
- [Spudger \(1\)](#)
- [Phillips #00 Screwdriver \(1\)](#)

 **PARTS:**

- [mSATA SSD \(1\)](#)

Step 1 — SSD

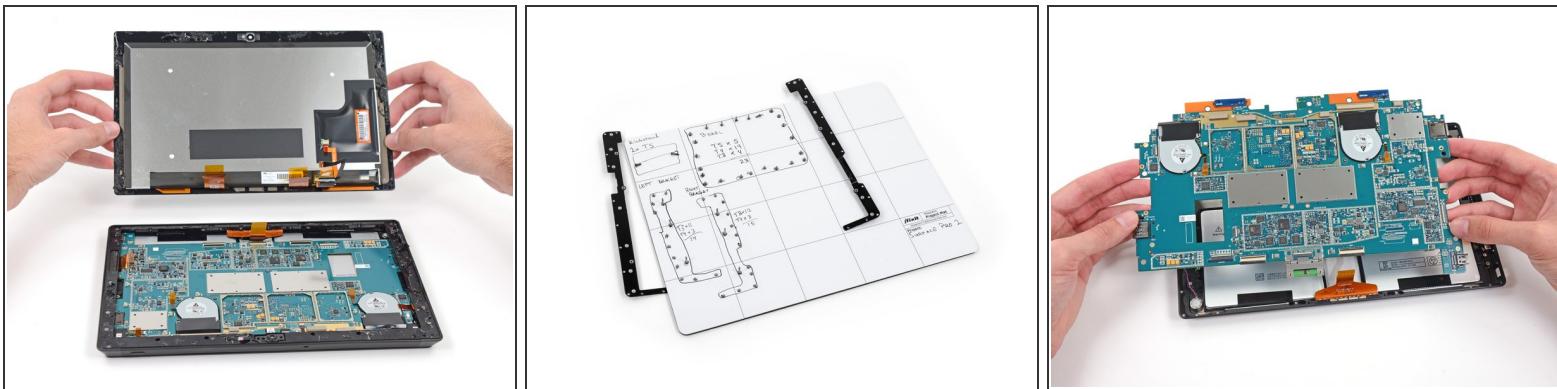

- Remove the two T5 Torx screws, then take off the kickstand.

Step 2

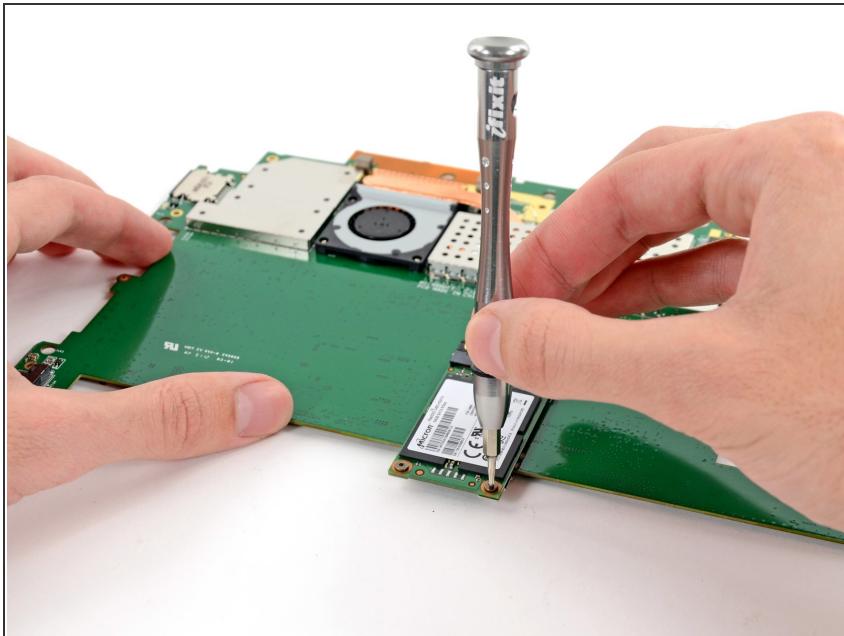

- Use an iOpener or heat gun to melt the adhesive.
- Insert 21 opening picks under the display.
- Slowly lift off the display.

Step 3

- Remove the four ribbon cables connecting to the motherboard with a spudger.
- Remove the 52 screws securing the motherboard to the metal plates and the plastic bezel.
- Lift off the motherboard.

Step 4

- Unscrew the two screws on the mSATA SSD and remove the SSD.
(Note: This image is from a first generation Surface Pro, but it works)

To reassemble your device, follow these instructions in reverse order.
