Step 1 — Lacing

- Untie the knot 1.

- (i) If you are having trouble, you can cut it with scissors.

Step 2

- From where the knot was, start unweaving the lacing.

- (📌) To unweave the lacing, pull it through all of the holes, until you get to the next section.

- (⚠️) The lacing is hard to pull through the glove and requires quite a bit of manpower.

- (i) The first section continues up until the pocket.

Step 3

⚠️ This section is difficult to unlace and may need the assistance of a tool to get it lose. We have used the unlacing/lacing tool that came with the our kit.
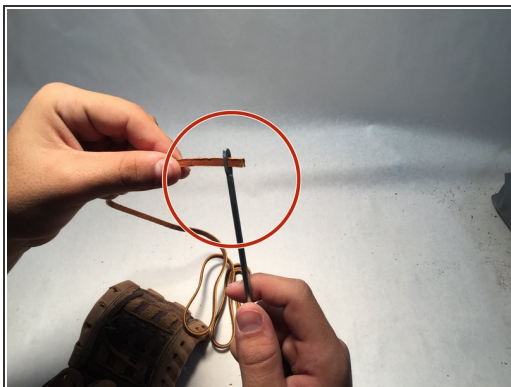

📌 This is the pocket section.

Step 4

● Trace along the pocket and when you come to the end untie the knot.

ⓘ We have now unlaced all of the glove.

Step 5

- Start by weaving the lace through the lacing tool as shown.

- Weave through spot A and then tie a knot.

- Weave the lace through the pattern shown

Step 6

- Weave the lace through spot B.

- Follow the pattern shown and tie a knot at spot C.

- (i) Make sure to pull this section tighter than the rest.

- Cut off the extra lace.

- We have now used the first length of lace.

Step 7

- Weave through spot D and then tie a knot.

- Follow the pattern shown.

Step 8

- Tie a knot at spot E and cut off the left over lace.

- (i) We will be using this lace in the next step.

Step 9

- Weave through spot F and tie a knot.

- Follow the pattern shown.

- Weave through spot G and tie a knot.

- (i) Spot G has another piece of lace in it but it opens up in two different spots.

Step 10

- Congratulations, you now have relaced your old baseball glove!

Enjoy your newly-repaired baseball glove.
