INTRODUCTION

This guide will show you how to replace the Moto Z's battery.

TOOLS:

- Spudger (1)
- iFixit Opening Tools (1)
- Tweezers - Pro/ESD/Angled (1)
- iOpener (1)

PARTS:

- Motorola Moto Z Replacement Battery (1)

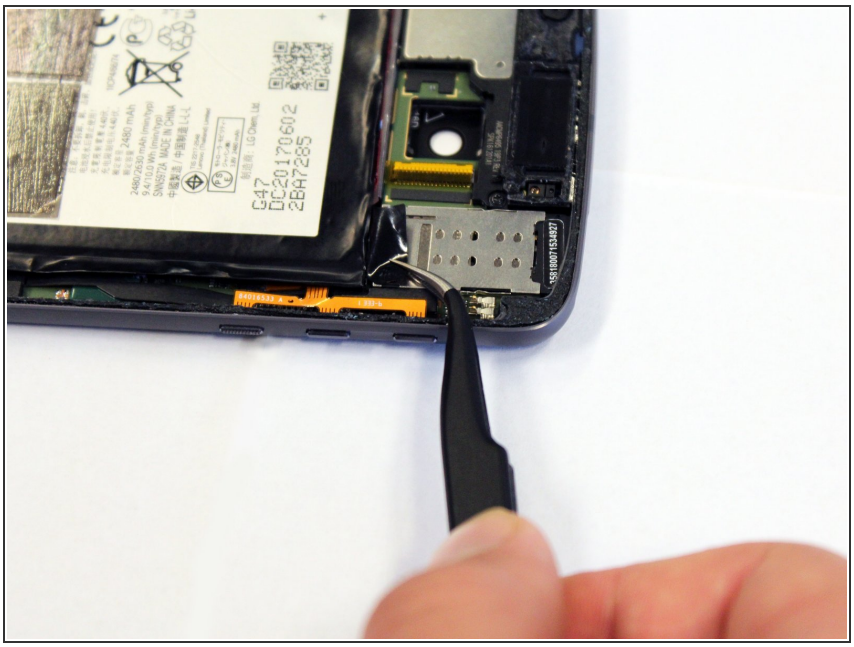
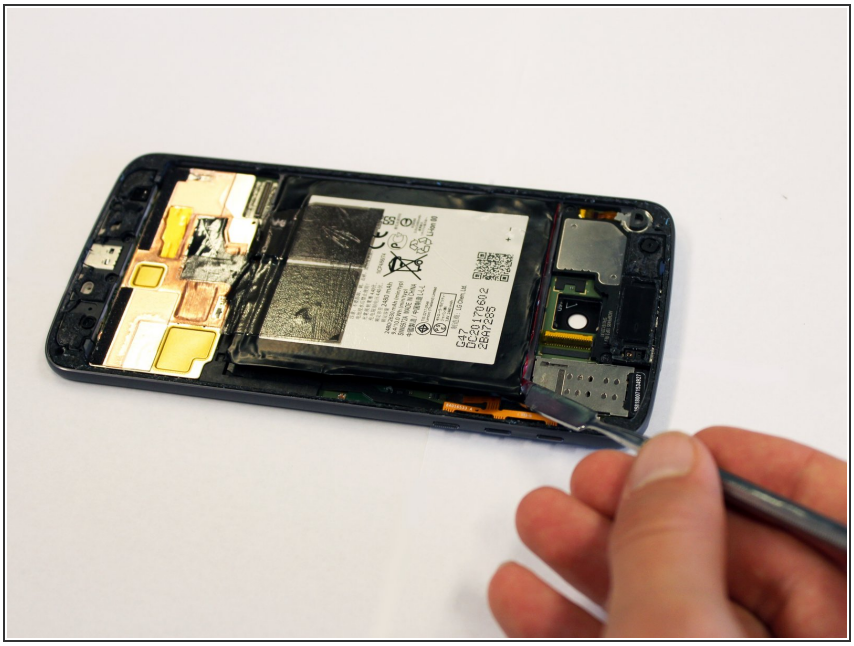
Step 1 — Battery



- Locate the pull tab on the top right of the battery.
- Pull up gently on the pull tab using angled tweezers.

⚠ The tab will easily tear. If it does, use a spudger to separate the corner of the battery from the phone.

Step 2



- Place the flat end of the nylon spudger in between the phone and the battery.

⚠ Use the nylon spudger despite the image in this guide showing the metal spudger.

- Pry the top of the battery off the phone, starting at the top right corner.

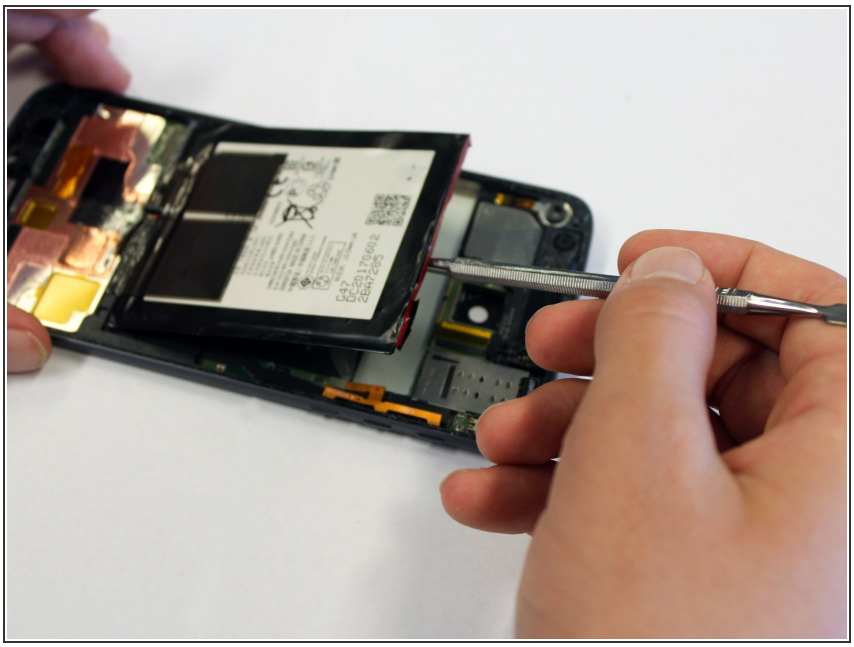
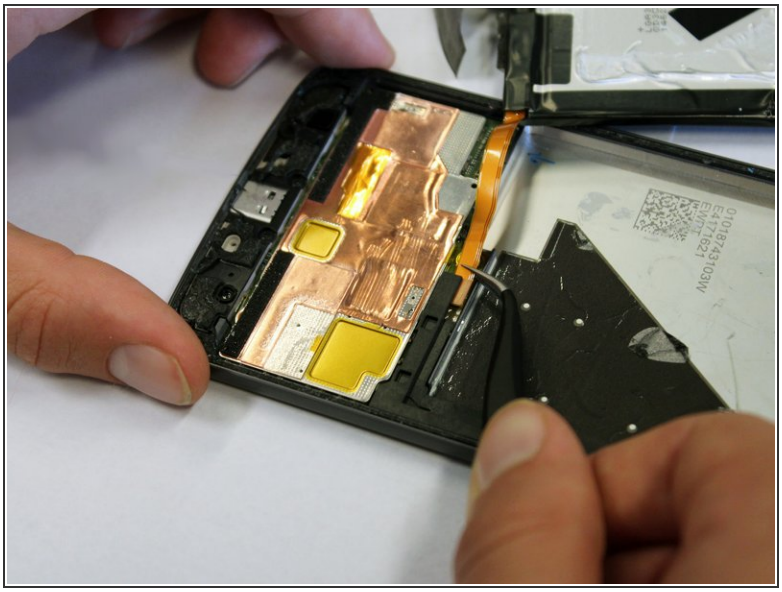
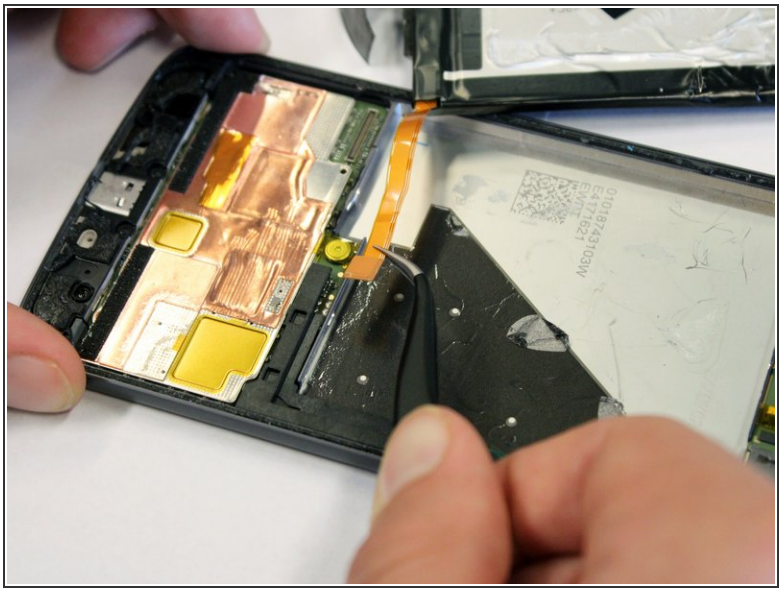
Step 3



- Lift the top half of the battery off the phone.
- Peel off the strips of tape at the bottom of the battery.

Step 4





- Pull the orange cable from the phone using the angled tweezers.

⚠ Do not remove the cable from the battery.

To reassemble your device, follow these instructions in reverse order.
