## INTRODUCTION

A guide on how to replace the volume and power buttons on a Motorola Droid MAXX 2 smartphone.

### TOOLS:

- [T4 Torx Screwdriver](#) (1)
- [Spudger](#) (1)

## Step 1 — Battery

- Insert a small pointed object into the hole on the sim card tray to eject the tray from the phone.

## Step 2

- Pull the sim card tray up out of the phone

## Step 3

- Wedge your thumb into the indent located on the bottom left corner of the back cover and pull up to remove the back cover.

## Step 4

- Remove the seventeen 3.2mm Torx T4 screws from the mid-frame.

**i** These may be T3 screws. If you are having trouble unscrewing these, stop and try a T3 bit.

## Step 5

- Pull the mid-frame off of the phone.
- *i* Keep track of the on/off and volume buttons when you take the phone apart because they are likely to fall out when the halves are separated.

## Step 6

- Remove the static tape covering the two connectors.
- Use a spudger to disconnect the battery cables from the motherboard.
- If battery has adhesive, use heat gun for one to two minutes to loosen it. Be careful of the points outlined in red when prying it up. Use guitar picks or a spudger to gently lift the battery and separate the adhesive.

## Step 7

- Remove the disconnected battery from the phone.

## Step 8 — Button Assembly

- Peel back the orange adhesive covering the ZIF connector.

## Step 9

- Lift the black tab on the ZIF connector up.
- Pull the ribbon cable out of the ZIF connector.

## Step 10

- Use the plastic spudger to loosen the metal prongs that hold the button assembly onto the phone.

## Step 11

- Pull the button assembly up and out of the phone.

To reassemble your device, follow these instructions in reverse order.
