

Motorola Moto Z2 Force Battery Disconnection

Pre-req only guide on disconnecting the battery on your Moto Z2 Force.

Written By: Tarun Thiruma

INTRODUCTION

Pre-req only guide on disconnecting the battery on your Moto Z2 Force for futher dissassembly.

TOOLS:

- [iFixit Opening Picks set of 6 \(1\)](#)
- [Spudger \(1\)](#)

Step 1 — Remove the Battery Tape

- Use a pair of tweezers to remove the two black pieces of tape securing the battery.
- ⓘ Take care to keep these tape pieces intact so they can be reused.
- ★ While not crucial, this tape helps dissipate heat from the battery. They won't stick back down by themselves, but if the tape pieces are still mostly intact, re-attach them with some adhesive during reassembly.

Step 2 — Remove the Battery Connector Bracket

- Use an opening pick to pry up the small black bracket covering the battery connector. It is secured with a small bit of adhesive.
- Use a pair of tweezers or your fingers to remove the bracket.

Step 3 — Disconnect the Battery Connector

- Use a spudger to pry up and disconnect the battery connector.

To reassemble your device, follow these instructions in reverse order.
