INTRODUCTION

rough draft

TOOLS:

- [1.5mm Hex Screwdriver](#) (1)
-

Step 1 — Face-Screen

- Clear a table or desk to use as a workspace. You will need a container to place small screws as they will be used in reassembly.

Step 2

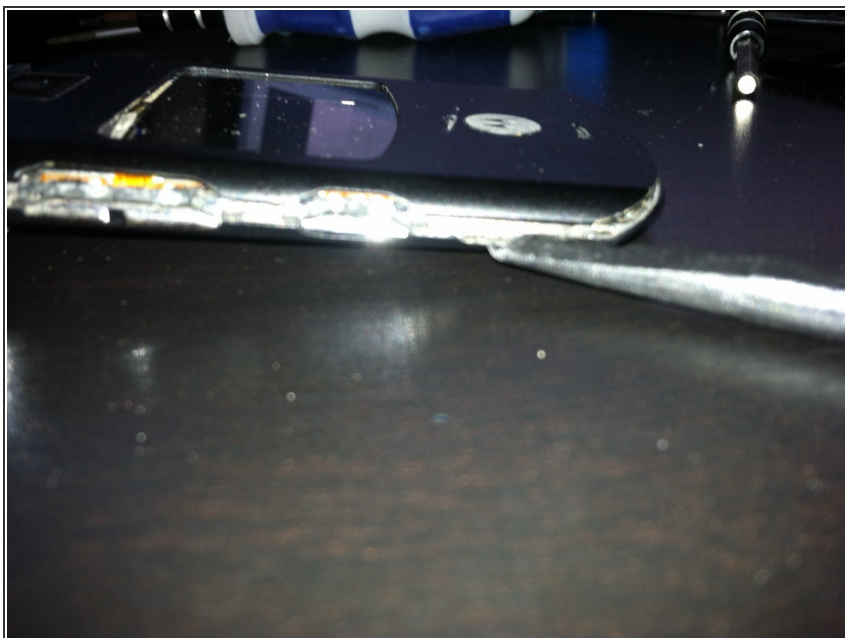

- Open the phone's face.

Step 3

- Unscrew the four screws located around the face plate using a 1.5mm Hex tool.

Step 4

- After removing the screws, use a flat surfaced tool to take the face-screen off.

Step 5

- Use this step as a checkpoint. Once the face-screen cover is off, the workspace should resemble this step's picture.

Step 6

- Carefully remove the face-screen using your fingers.

Step 7

- You may now carefully install a functioning face-screen.

Step 8

- After securing the face-screen into the casing, place the face screen cover back on.

Step 9

- Screw in the four corner screws.
After completion of this step, your phone should function properly.
Enjoy!

Enjoy your newly inserted face-screen.
