

# Motorola V557 Camera Replacement

Written By: Matthew Sanders

---

# INTRODUCTION

Prerequisites: Battery, Faceplate

## TOOLS:

- [iFixit Opening Tools](#) (1)
  - [Push Pin](#) (1)
  - [Spudger](#) (1)
  - [T6 Torx Screwdriver](#) (1)
-

## Step 1 — Battery

- Push down on the silver button while sliding the back plate down to reveal the battery.

## Step 2

- Grab the lower edge of battery at the black areas and pull upward on the edges to remove it.

### Step 3 — Faceplate

- Remove the four rubber stoppers from around the screen with a pin to reveal four screws.

### Step 4

- Remove the four 3.8 mm T-6 Torx screws.

## Step 5

- Separate the cover from the edges using a plastic opening tool.

## Step 6

- With the edges separated, close the phone and lift off the faceplate with your fingers.

## Step 7 — Camera

- Gently peel off the plastic film from the metal plate above the camera lens as shown.

## Step 8

- Insert the spudger into the slots marked and gently pry upwards to remove the metal cover.
- Repeat the previous bullet for the two corresponding tabs on the opposite side of the phone.

## Step 9

- Lift and peel back the tape attaching metal casing to body of the phone.
- Gently lift the metal cover and remove to expose the circuit board.

## Step 10

- Using a plastic opening tool, pry or lift open the pink door shown.
- After the door is open, gently pull on the ribbon cable's corner to separate it from the board.

⚠ Work out the ribbon cable's end slowly and gently to avoid damaging the pink door port.

## Step 11

- Use a plastic opening tool to dislodge and remove the rubber camera cover.

## Step 12

- Lift the top ribbon cable, with camera attached, up and away from the rest of the phone.

To reassemble your device, follow these instructions in reverse order.
