

MovPak Teardown

Written By: Tony Shannon

INTRODUCTION

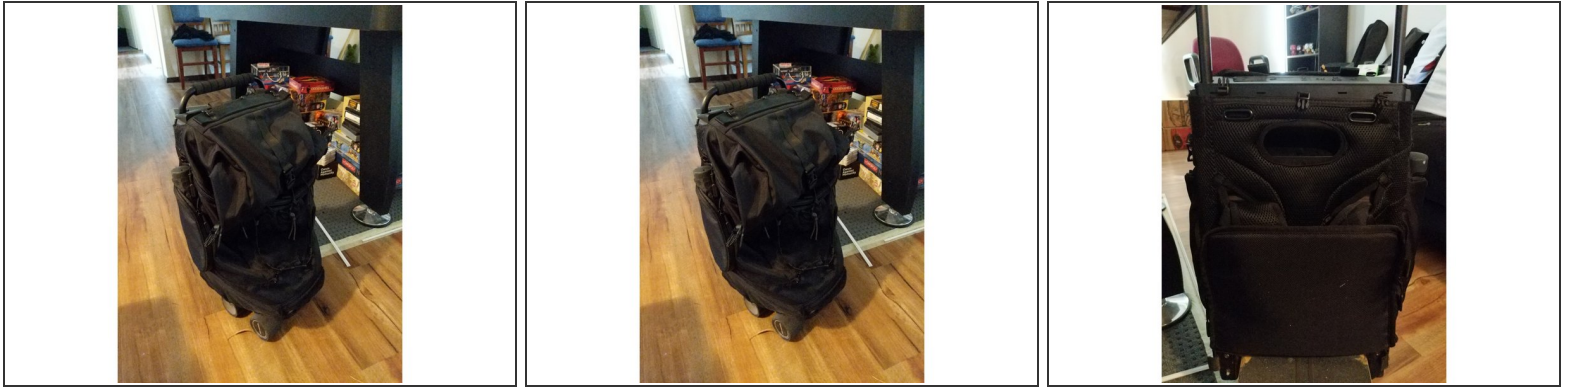

Today my movpak stopped working so I decided to give it a tear down to see why

TOOLS:

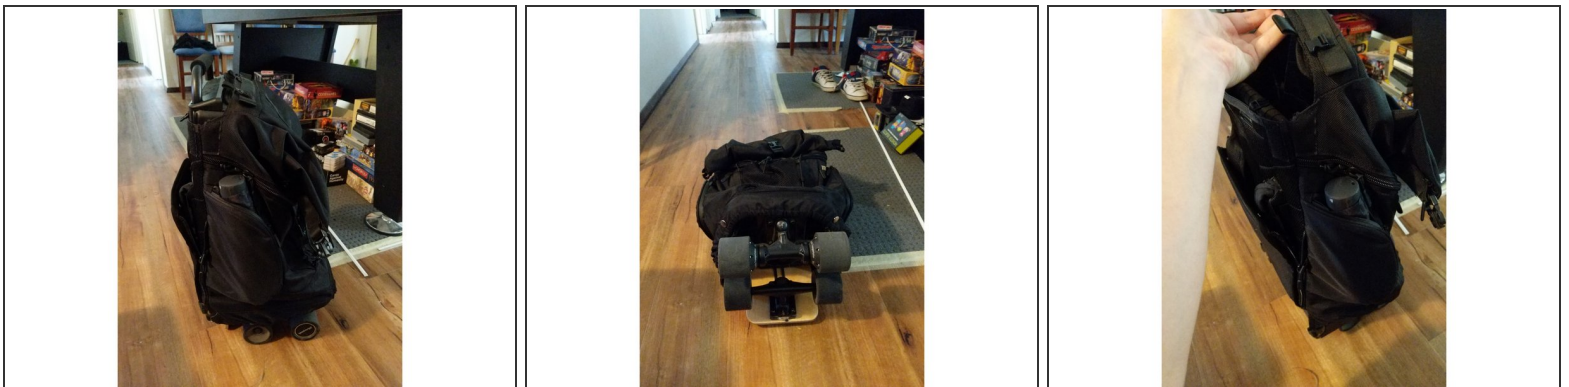

- [Flathead Screwdriver](#) (1)
-

Step 1 — MovPak Teardown

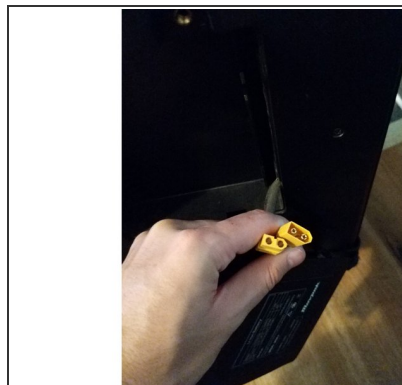

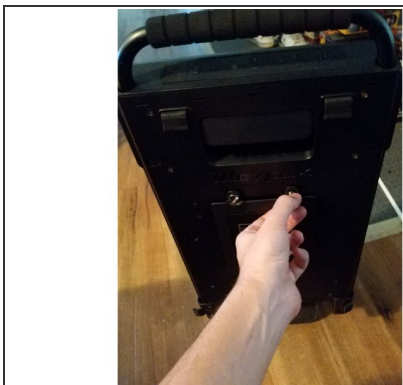

- The move pack is an electric skateboard and a backpack

Step 2

- Close the skateboard extension and disconnect before push pins from the bottom of the backpack cover
- Should now be able to slide the back back cover off the top of the skateboard assembly

Step 3

- Undo the two battery screws by using your hand or a flathead screwdriver

⚠ When removing the battery be aware that it is connected with a standard cable

Step 4 — The battery

- The battery is a lithium ion battery model TG 186 5-0 90 capacity 2.5Ah size 175 by 130 by 37 voltage 3.6 volts sell Samsung / 25 are weight 1 kg
